#### MASP INSTRUCTIONS

\*Pages <u>1-11</u> or through map and aerial hazard analysis page (due to extended risk assessment) require total completion for submission, review, and approval signature (Mission approver signature-appropriate level line officer). Subsequent pages see instructions below\*

**Subsequent pages include:** Pilot information, flight following, frequencies, MTR's / MOA's, crash rescue /medivac, and additional appendices. Complete these pages as information becomes available. Partial completion of these pages is recommended during the submission process. (Subsequent pages shall be filled out prior to mission initiation).

#### **RISK MATRIX INSTRUCTIONS**

Appropriate management level for operational risk decision will remain the same in the color-coded format. The number system on page (6) in the risk management scale is incorporated into the drop-down menu of risk assessment attached. Values of risk level are as follows:

Low-1 Medium-2

Serious-3 High-4

In no case will the overall risk of the mission be less than the highest specific factor. (Example: One high, one serious, and two medium threats couldn't result in anything less than a high).

#### **SIGNATURE'S**

Signature blocks are in order of how the MASP will move forward for review and signature. Route all MASP's through the Zone Aviation Officer or delegated acting. The tan colored fields are required to be signed for at the Line Officer level. The MASP's will be routed back down through the Zone Aviation Officer or delegated acting after signature from the Regional Aviation Officer. MASP will come back in PDF for approving official to sign in signature block and risk assessment (See tan highlighted areas).

Signing: All signature boxes up to the Zone Aviation Officer will be signed in typed text. See below.

Example: /s/ John M. Smith

Regional Aviation Safety Manager and Regional Aviation Officer will sign with a link pass digital signature. Approval of risk assessment and line officer plan approval final signature will be wet signature or link pass digital signature. These areas are a tan color. The mission aviation safety plan will come back to the field in PDF format for ease of link pass signatures.

#### **RETENTION AND FILING OF PLAN**

Once the mission safety plan is approved, the plan will be maintained in the dispatch office and referenced during flight. Retention of the plan and daily briefing sheets by the forest, refuge or unit shall be one year: reference NSHO Chapter 3, Mission Aviation Safety Plans, or any other governing policies that refer to MASP retention per aircraft type.

#### **Mission Name**

#### Forest Service-Florida State Forest Service Joint RX PSD Burn Operations CY 2023

<u>Mission Description:</u> Note: Compliance with the operational procedures outlined in the Mission Aviation Safety Plan is required.

Aerial ignition in support of prescribed fire and forest ecosystem management. These missions will consist of pre-burn recon of the unit(s) and aerial ignition operations and may also include post burn recons, smoke dispersion recons, and helitack operations (bucket support, personnel transport, cargo, etc.). Aerial ignition will be accomplished with Exclusive Use, Call-When-Needed (CWN), or agency owned aircraft (WCF). Incoming units will receive a local aviation in-briefing. (Airspace, Frequencies, DOE/DOD areas, Etc.)

<u>Mission Objectives</u>: Reduce hazardous fuels/fuel loading and severity of wildfires, restore/maintain ecosystems and enhance wildlife habitat. Conduct prescribed burn operations to achieve agency objectives while generally minimizing cost per acre, limiting exposure to personnel and reducing impacts to communities.

Reference unit burn plan for specific objectives, prescriptions, goals, firing patterns, etc.

- \*Federal policy and guidelines shall be adhered to during operations on state aerial RX missions\*
- \*\* This MASP is only valid for joint Forest Service and Florida State Forest Service burns only\*\*

<u>Aircraft Justification for Mission:</u> Using rotor wing aircraft and aerial ignition for prescribed burning operations is the most efficient means of meeting mission objectives. This method of conducting burns allows for the following:

- Personnel Safety: Limits exposure and mitigates the need for additional personnel. Reduces
  the need for ground ignitions, particularly inside the burn unit where vegetation is often thick
  and impenetrable.
- Cost Effectiveness: Expedites time frames, lowers personnel requirements for conducting landscape burns and achieves agency goals while generally reducing cost per acre.
- Smoke Management: Smoke management issues are better mitigated with aerial ignition.
   Burns can be completed earlier in the day to take maximum advantage of mixing heights and transport winds. Aerial ignition allows enhanced burn patterns and ignition strategies increasing coverage within a burn unit. This reduces ignition times and allows for better overall consumption within the unit and more time for smoke dispersion.

Improbable	Low 1								
Е									

Severity and Likelihood Scale Definitions						
Severity			Likelihood			
Catastrophic	Fatalities and or loss of the system.		Frequent	Likely to occur and continuously experienced.		
Critical	Severe injury and or major system damage.		Probable Occasional	Will occur several times and occur often.		
Marginal	Minor injury and or minor system damage.		Remote	Likely to occur sometimes and will occur several times. Unlikely to occur, but possible.		
Negligible	Less than minor injury and or less than minor damage.		Improbable	Unlikely, but expected to occur.  So unlikely, assume it will not occur. Unlikely to occur, but possible.		
				Unlikely to occur, but possible.		

Appropriate Management Level for Operational Risk Decisions								
Risk Level	Fire	Mission: Non-Fire						
High	Incident Commander or Operations Sections Chief	Line Officer/Manager						
Serious	Incident Commander or Operations Sections Chief	Line Officer/Manager						
Medium	Air Operations Branch Director	Mission Aviation Manager						
Low	Base Manager	Helicopter or Flight Manager						

SAFETY MANAGEMENT SYSTEM ASSESSMENT AND MITIGATION								
System Bein	g Evaluated: Aerial Ignition- PSD	Pre Mitigation			Post Mitigat		ation	
Sub System(s)	Hazards	Likelihood	Severity	Risk Level	Mitigation	Likelihood	Severity	Risk Level
Aerial Hazards	Avoid known hazards and aerial obstacles such as bird strikes, embers, smoke, etc.	Probable	Critical	High-4	Brief personnel to be aware of known physical hazards using the Aerial Hazards Map. See and avoid birds and other obstacles. Use quality crew communication and implement crew resource management.	Remote	Critical	Medium-2
Capability	Aircraft capabilities/limitations are not appropriate to mission.  Overloaded aircraft. Adverse wind speed and direction.	Occasional	Catastrophic	High-4	Ensure appropriate aircraft is ordered and utilized. Conduct a thorough pre-mission briefing. Complete load calculations and weight & balance. Pilot to obtain updated weather briefing and continually monitor wind speed and direction. Operate aircraft in accordance with RFM.	Remote	Catastrophic	Serious-3
Communication s	Unclear on assignments or unclear briefing. Miscommunication from air to ground. Poor communication such as non-standard wording etc. Loss of communications (FM, AM, or ICS).	Occasional	Critical	Serious-3	PLDO/FIRB to perform a complete briefing. Use clear text and proper nomenclature in all communications. Utilize read-back to ensure instructions are understood. Follow established firing commands. Suspend all operations until communications can be restored.	Remote	Critical	Medium-2
Equipment	Equipment not properly connected or installed for the specific type of aircraft. Improper wiring of the 3-pin plug. Flying in and around smoke. Malfunction of the restraint system for personnel.	Occasional	Critical	Serious-3	Refer to the IAIG, STC's, and 337's for proper procedures- contact HOS or AMI with questions and to initiate requests for additional approvals. Perform function test prior to ignition to confirm wiring is correct. Check restraint prior to takeoff. Repair or replace damaged or worn components.	Remote	Critical	Medium-2

SAFETY MANAGEMENT SYSTEM ASSESSMENT AND MITIGATION								
System Bein	g Evaluated: Aerial Ignition- PSD	Pre Mitigation				Post Mitigation		
Sub System(s)	Hazards	Likelihood	Severity	Risk Level	Mitigation	Likelihood	Severity	Risk Level
Environment	Unimproved landing sites. Visibility.	Probable	Critical	High-4	Identify alternate landing areas in pre-burn recon. Perform an aerial recon of the site before landing, notify flight following personnel of landing location. Limit time flying in smoke. Coordinate ignitions to minimize exposure to smoke.	Occasional	Critical	Serious-3
Mission Planning	Military training routes, military operating areas, and general aviation traffic.	Occasional	Catastrophic	High-4	Consult up-to-date materials to identify routes. Ensure dispatch is appropriately using deconflicting procedures. See and avoid general aviation traffic.	Remote	Catastrophic	Serious-3
Mission	Inability to identify the Fireline location. Impact on people and animals in the proximity of the burn.	Occasional	Critical	Serious-3	Ensure adequate recon to identify Fireline, people, and animals. Use mapping technology to aid in boundary identification. If appropriate, have ground personnel light Fireline. Complete preburn notifications. Stop firing operations if necessary.	Occasional	Critical	Serious-3
Pilot Experience and Capabilities	Lack of pilot proficiency. Inadequate performance planning. Lack of recognition of adverse wind speed and direction, inexperienced in low-level helicopter operations.	Occasional	Catastrophic	High-4	Ensure an understanding of mission, hazards, and mitigations. Complete recon. Ensure pilot is carded for aerial ignition. Perform adequate planning using agency policy and guides. Refer to FSAPB 16-01 Helicopter Maneuvering and Power Management.	Remote	Catastrophic	Serious-3

	SAFETY MANAGEMENT SYSTEM ASSESSMENT AND MITIGATION								
System Beir	ng Evaluated: Aerial Ignition- PSD	Pre Mitigation			Post Mit		t Mitiga	ition	
Sub System	Hazard	Likelihood	Severity	Risk Level	Mitigation		Likelihood	Severity	Risk Level
Plastic Sphere Dispenser	Malfunction of the machine. Improper installation. Improper or lack of maintenance. Improper securing of spheres, backup water supply, and other loose items for doors off operations.	Occasional	Critical	Serious-3	Inspect and test machine prior to use. Ass proper installation- ensure pilot or mecha verifies. Follow policies on maintenance, cand store machine after each use. Send to manufacturer as needed. Ensure items are properly secured for doors off operations.	nic clean, o e	Remote	Critical	Medium-2
Human Factor	Failure to follow policy and procedures. Sense of urgency/time pressure or mission pressure. Lack of familiarity with others working on the operation.	Occasional	Critical	Serious-3	Confirm policy and procedures are identifunderstood, and followed. Ensure not place undue pressure on others. Conduct daily briefings, utilize standardized procedures, practice CRM, and limit rotation of person possible, to maintain CRM.	cing	Remote	Critical	Medium-2
Final Assessment: Low-1 Medium-2 Serious -3 High-4 High-4		Prepared By: Joshua Pierotte				10/26,	/2022		

Map Of Mission Area: See attached maps on pages 24-26. The map of the Mission area will be reviewed before all flights. State lands to be burned under this plan are adjacent to Forest Service lands and fall on this map.
Aerial Hazard Analysis: Missions may be conducted out of establish helibases and airports within
Florida. Additionally, missions may be conducted out of establish helibases and airports within Hazard Map. In this situation, a Helispot Manager, crash rescue kit, fire extinguisher and medical evacuation kit will be in place at the Helispot. The Helicopter Manager will brief all participants involved in the burn, to include the tractor, engine and UTV operators as to their responsibilities for crash rescue operations.
All new pilots coming to the National Forests in Florida will be given a briefing by the Helibase / Helicopter Manager. When the briefings have been completed, the participants may commence flight operations. Once the helicopter is airborne positive radio communication will be established between Tallahassee Dispatch and the helicopter. Dispatch may also make a courtesy call, via landline, to inform the Scheduling Activity of the helicopter's intentions and where the helicopter will be working in relation to the MTR's. Refer to the Aviation Hazard Map and the Aviation Hazard Map Reference Table for MTR number and contact information for the Scheduling Activity. sUAS and general aviation activities also may be an issue within the Mission area.

#### **Aircraft Performance Planning:**

The pilot is responsible for the accurate completion of load calculations or PPC (military performance planning). Trained personnel shall ensure that aircraft scheduled are capable of performing the mission(s) safely and within the capabilities of the aircraft selected. The helicopter or flight manager shall ensure that manifests, load calculations, weight & balance are completed properly using accurate environmental and aircraft data. Reference NSHO chapter 7 or chapter 70 of the Military Use Handbook for additional information.

Personal Protective Equipment: * Alw	vays refer back to current ALSE, NSHO, and manual direction*
Type of Operation- Check applicable boxes that may apply to the mission	Personnel protective equipment requirements
Rotor Wing Ground Operations     Including UAS	Fire-resistant clothing, hard hat w/chin strap or SPH-5 flight helmet or other approved model, fire resistant and/or leather gloves, all leather boots, eye protection, hearing protection.  *Refer to appropriate guides or policies for UAS PPE pending mission*
⊠ Rotor Wing	Fire-resistant clothing, SPH-5 flight helmet or other approved model, hard hat w/chin strap, fire resistant and/or leather gloves, all leather boots, eye protection, hearing protection. Additional personnel restraints needed in the helicopter pending type of mission. * Refer to appropriate guides or policies. * Charter flights, (non-agency controlled mission), shall comply with 14 CFR 135 requirements.
□ Doors Off Flight(s)	Personnel will remain seated and inside fuselage during all flights, approved secondary restraint harness for doors off flights (only for PLDO, HRAP, HRSP, Aerial Photography, IR Operator, ACETA Gunner, Cargo Letdown, Short Haul Spotter, Cargo Free Fall Operations-type 3 helicopter) * Refer to appropriate guides or policies*
☐ Cargo Free Fall Operations	Fire-resistant clothing, SPH-5 flight helmet or other approved model, fire resistant and/or leather gloves, all leather boots, eye protection, hearing protection. Additional qualifications, compliance with rotorcraft manual, and approved restraint requirement apply. * Refer to NSHO chapter eleven for additional details or other agency guides and policies. *
Fixed Wing	Refer to current IASG, ALSE, and 5700 manual directions for PPE requirements.
