FIRE BEHAVIOR FORECAST

FORECAST NUMBER: # 4	TYPE OF FIRE: Wildfire
FIRE NAME: Stuart Creek #2	OPERATIONAL PERIOD: Day – July 6, 2013
DATE ISSUED: 07/05/13	TIME ISSUED: 2100 hrs
UNIT: BLM	SIGNED: Bob Patton (FBAN)

WEATHER SUMMARY:

High temperature: 75 degrees **Minimum RH:** 25% **Winds:** Eyelevel upslope/upvalley 4-7

See attached Fire Weather Forecast for more details.

Take weather observations, and call in hourly to Communications. Please include location and elevation. Watch for increased temps and a decrease in RH when sun breaks through the cloud cover.

FIRE BEHAVIOR

GENERAL:

Fire danger indices are all running at an extreme level for this time of year. The fire has been burning through mixed boreal fuel types that normally act as a barrier to intense fire behavior. A fuels and fire advisory was issued on June 1st 2013 for dry fuelbeds, rapid ignition, and intense burning under low windspeeds. Today the minimum RH is predicted to be 25% in conjunction with warmer temperatures and higher windspeeds that could result in an increase the fire behavior today. Daytime heating will persist late into the evening that could result in active fire behavior throughout the night.

FUELS:

Black spruce forest.

FL Head: Up to 21'

ROS Head: Up to 29 ch/hr, and could be higher in drainages.

This fuel type is burning actively and is the main fuel type carrying the fire. Most areas are being fully consumed. Fire transitions into crowns very quickly. Fire in this fuel type has been advancing about one mile per day when aligned with topography and wind, around one-quarter mile per day when backing.

Spruce/Hardwood mix.

FL Head: Up to 10'

ROS Head: Up to 11 ch/hr

This fuel type is not burning as intensely as the black spruce. The transition to a crown fire is about 200 yards behind the ground fire. Fuels are initially burning spotty, but will fully consume with a little wind. Fire in this fuel type has been advancing about one-quarter mile per day.

Fire intensity will increase quickly as the RH drops below 30%, or if mid-flame wind speeds are above 10 mph. Take regular weather observations, and watch for these conditions.

Both fuel types are interspersed throughout the fire area. North facing slopes have been burning actively when exposed to sun. Fire will react quickly to changes in the weather. When cloud cover breaks and sun shine reaches fuels, fire intensity will increase dramatically. Monitor weather conditions throughout the day.

Spotting distance: Up to .5 miles

Probability of ignition: 50%.

AIR OPERATIONS:

Visibility will generally be poor in the morning hours.

SAFETY

Fuels in Alaska are volatile and flashy. Extreme fire behavior is common in seemingly moderate weather conditions. Expect the unexpected.

SAFETY MESSAGE

Stuart Creek 2

July 6, 2013

Fire Behavior:

- Fire indices are at critical or near critical levels.
- Prolonged heat and lack of moisture means the possibility of intense burning under even light wind conditions.
- This fire has experienced large fire growth and may do it again.
- Monitor the daily forecasts and take regular weather on the fire line.
- Communicate any sudden changes up and down the line.

Transitions:

- Transitions are a watch out situations.
- This is the second team transition in a short period of time.
- Know who you are working for and what the plan is (Watch out #6)
- Ask questions early and often: don't walk away unsure. (What out #5)

Unexploded Ordinance (UXO): Page 25 IRPG

- Report any suspected ordinance to your supervisor immediately.
- Do not transmit radio near suspected UXO's
- Never touch, move, disturb.
- Isolate and flag the area and deny entry.
- Clearly flag off area

Wildlife:

- **Bears are the Most Dangerous when:**
 - ✓ When sow with cubs.
 - ✓ They feel threatened.
 - ✓ You are obstructing their path.
 - ✓ You encounter their den, feeding area or trail.
- DO NOT RUN: When you run you may look like prey to the bear.
- Do not threaten the bear and force it to fight back.
- Allow the bear a way out with dignity.
- Pretend you are not afraid.
- **Be aware of wind direction. If the wind is in your face the bear may not smell you.**

Hazard Trees:

- Native trees especially White Spruce have shallow roots systems and are weakened after ground fire
- Follow Hazard Tree Safety Guidelines
- Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen, clear the area before falling, YELL OUT!
- Be especially alert around snags AND green trees during wind events.

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	LCES	<ul style="list-style-type: none"> • Difficult terrain to post lookouts • Use air attack when necessary • Maintain situational awareness
ALL	UNEXPLODED ORDNANCE (UXO)	<ul style="list-style-type: none"> • Recognize-Retreat-Report • DO NOT PICK UP OR TOUCH • Avoid radio transmissions near UXO • Withdrawal to a safe distance • Flag or Identify area where object is located • Deny entry until Ordnance Disposal personnel arrive • Report to you supervisor • All personnel must have UXO training prior to work assignment
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Buildup Index (BUI) values have risen rapidly, well above thresholds for crown fire in spruce, and intense burning in tundra fuels. • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. • Adhere to 10 Std Orders, mitigate 18 situations. • Maintain Situational Awareness.
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue. • Be aware of fatigue associated with sunrise/sunset if from out of state
ALL	HYDRATION	<ul style="list-style-type: none"> • Drinking water before, during and after shifts, up to 1.5 gal. per shift. • Be alert for signs of heat stress in yourself and others.
ALL	ATV USE	<ul style="list-style-type: none"> • Operators must have proper PPE suitable for the vehicle • Only carded and qualified operators • Ensure proper Safety briefings. • Provide daily equipment inspections.
ALL	INDIRECT ATTACK	<ul style="list-style-type: none"> • Extra care with situational awareness due to difficulty in locating lookouts • Carefully monitor weather watching for decreasing RH values • Use lookouts as much as possible/practical in this terrain • Have escapes routes planned and make them known • Ensure communications with your supervisor
ALL	BOAT SAFETY	<ul style="list-style-type: none"> • Vessels must only be operated by qualified personnel • All passengers must have pre trip safety briefing • PFDs worn at all times & worn correctly
ALL	STRUCTURE DEFENSE	<ul style="list-style-type: none"> • Base all actions on current and expected fire behavior • Ensure escape routes or safety zones prior to arrival of fire • Avoid parking under power lines

8. MEDICAL EMERGENCY PROCEDURES

LINE MEDICAL EMERGENCY:

Crew Supervisor to contact Division Supervisor/Operations with patient complaint/condition and location.

Division Supervisor/Operations contacts communications:

* Division Supervisor/Operations to use "injury or incident communication protocol" on next page

- Division Supervisor/Operations will run medical emergency on command channel
- Communications contacts Medical Unit Leader on Command channel
- Medical Unit Leader will:

1. Have communications dispatch ground/air transport resources @ UYTD (907)356-5551
2. Develop primary and contingency transport plan
3. Notify Safety, Logistics and Operations

CAMP MEDICAL EMERGENCY:

Notify Communications of camp emergency

Communications contacts Medical Unit with patient complaint/condition and location.

- Medical Unit contacts:
 1. Safety
 2. Logistics
 3. Operations
- Medical Unit Leader will:
 1. Have communications dispatch ground/air transport resources
 2. Develop primary and contingency transport plan
