See attached Fire Weather Forecast.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Yesterday's low relative humidity and light winds further dried fuels in the fire area. With today's predicted weather, fire behavior should continue to pick up.

There will be more areas of creeping and smoldering showing up. We should see increased fire activity with higher intensity surface fire, single tree and group torching with spotting possible in black spruce.

Crown fire in black spruce may be possible with alignment.

There continues to be a lot of heat remaining over large areas of the fire. The fire has the potential for continued growth where the edge is active.

All fuel types are supporting surface burning on the Aggie Creek fire because of extremely dry conditions.

SPECIFIC:

Divisions A & W: Expect moderate to active levels of surface burning. There will be some torching and flare-ups in black spruce stands where surface heat exists. Predicted northeast winds will blow across the fire perimeter in these divisions which could cause spread to the south and southwest.

Division G: The fire will continue to burn into pockets of available fuels along the fire's west edge.

Divisions T, U, & V: Predicted northeast winds will blow into the fire area in these divisions; this will be favorable for burnout. Expect moderate to active surface fire. Torching and flare-ups in black spruce will be more common than the previous couple of days.

Globe Creek and Hayes Fires: No activity or spread anticipated.

New fire starts: Expect active burning and spread on new fires.

Possible spread rates today:

Fuel Model	Rate of Spread
Black Spruce	34 feet/min (crown fire)
Grass/Tussock Tundra	22 feet/min
Mixedwoods, Green	9 feet/min

Be aware of the possibility for reburn in many brush and black spruce areas. Mixedwoods and bottomland areas may slow surface fire spread, but will not be barriers to fire movement.

Alaska Portable #6 RAWs (forecasted): FFMC 90.5 Very High, ISI 7.8 High, BUI 117.4 Extreme, FWI 28.6 Very High

AIR OPERATIONS:

No problems identified for air ops.

SAFETY:

Watch out situation #11 – Unburned fuel between you and the fire. Standard Firefighting Order #2 Know what your fire is doing at all times. Terrain and vegetation here makes it difficult to see what is happening on other parts of the fire. LCES

HEALTH AND SAFETY MESSAGE

We are **ALL** accountable for **SAFE** behaviors

For Day Operations: July 11, 2015

INCIDENT: **Aggie Creek**

DATE: July 10, 2015 TIME: 1600

Major Hazards and Risks:

- **WILDLAND/URBAN INTERFACE:** Be aware of other drivers, pedestrians and ATV/UTVs.
- **FATIGUE:** Provide for firefighter rest (minimum of a 2:1 Ratio).
- **AVIATION-** There's a lot of stuff flying out there, including aerial ignition operations! Make sure you know the plan and communicate with aircraft! Review IRPG pg. 44, Aviation Watchout Situations!!

OPERATIONAL TEMPO!!

As the operational tempo continues to shift, make sure that you are reviewing the "Common Tactical Hazards" (IRPG pg. 6) that we face daily while on a fire.

Position:

- Building fireline downhill.
- Building underslung or mid-slope fireline.
- Building indirect fireline, or unburned fuel remains between you and the fire.
- Attempting frontal assault on the fire, or you are delivered by aircraft to the top of the fire.
- Depending on escape routes that are uphill or difficult to travel.

Situation:

- Poor communication due to a rapidly emerging small fire or an isolated area of a large fire.
- Suppression resources are fatigued or inadequate.
- Assignment or escape route depends on aircraft support.
- Wildland/urban interface operations.

When selected tactics put firefighters in these positions or situations, a higher level of risk is involved. Consider additional hazard controls that may be needed!!

AFTER ACTION REVIEWS (AAR)

As personnel are "timing out" or going to the next incident make sure we are learning all we can from this fire!!

Utilize the AAR process....

- Must be open, and honestly discuss what happened
- Provide enough clarity and detail so everyone understands what happened, and why
- Participants should want to improve their proficiency
- We should always focus on the "What", not "Who", but respectful disagreement is OK!!
- All AAR's should end on a positive note
- **Remember: We're in Alaska and many personnel have not been here before. Pass on what you've learned!!**

Want more information????.....Review page xii in your IRPG.....and do one today!!!

Thanks from your Aggie Creek Safety Team!!

- Integrity..... Integrity and Honesty are vital on a fire. If you mess up, fess up, whatever you did can most likely be fixed if you report it as soon as you are aware of it.
- Respect..... Treat others as you would like to be treated
- Example..... Set an example. Realize you influence others around you, therefore, always conduct yourself in a professional and competent manner, but still have fun!
