# Minto Lakes Fire Weather Forecast

**Forecast Number:** 11  
**Divisions:** All  
**Shift Date:** 07/09/2022 0800 - 07/10/2022 0800

**Incident Meteorologist:** Jonathan Chriest (T)  
*/s/ Jonathan Chriest*  
Forecast Issued: 1900 July 8<sup>th</sup>, 2022

**...Red Flag Warning continues through Sunday night for lightning and dry fuels...**

## WEATHER DISCUSSION:

The fire will remain under the influence of upper level high pressure over northwest Canada. A low pressure system in the Gulf of Alaska will slide east tomorrow and bring additional instability into the Interior. This will help the inversion break earlier, around 1500, and lead to an earlier start to thunderstorm activity as well as an increasing chance of thunderstorm activity over the fire and over the ICP the next 2 days. Temperatures tomorrow will again be in the mid 70s to low 80s. Minimum relative humidities will also be mostly in the 30s again, though the potential exists to drop to or just below the 30% mark. Winds tomorrow will again be mostly light (except outflow boundaries) and terrain driven with gusts to 10 mph in the afternoon and evening over ridgetops and upvalley along the Chatanika River.

**WEATHER FORECAST FOR SATURDAY:** Partly cloudy skies with areas of smoke and haze. Thunderstorms will develop earlier tomorrow, during the afternoon hours, and continue into the evening hours.

**TEMPERATURES:**  
**Ridge Top:** Highs: 74-80  
**Slope/Valley:** Highs: 78-82

**HUMIDITY:**  
**Ridge Top:** Min: 36-42 %  
**Slope/Valley:** Min: 29-36 %

**20 FT WINDS:** **Ridge Top:** Nearly calm early, becoming southwest 4-8 mph with gusts to 10 mph by early afternoon.  
**Slope/Valley:** Downslope 1-3 mph in the morning, becoming southwest by noon at 3-6 mph with gusts to 10 mph.

**CHANCE OF WETTING RAIN:** 20 % - LAL: 4 - FFMC: 92 - 94

**STABILITY/INVERSION:** Inversion will break by 1500 as mixing heights rise to 5000 feet AGL.

**WEATHER FORECAST SATURDAY NIGHT:** Partly cloudy with scattered thunderstorms through mid to late evening.

**TEMPERATURES:**  
**Ridge Top:** Lows: 57-60  
**Slope/Valley:** Lows: 55-58

**HUMIDITY:**  
**Ridge Top:** Max: 78-85 %  
**Slope/Valley:** Max: 82-90 %

**20 FT WINDS:** **Ridge Top:** Southwest in the evening around 4 to 8 mph with gusts to 10 mph, becoming south 2 to 4 mph by midnight.  
**Slope/Valley:** Southwest 3 to 6 mph with gusts to 10 mph in the evening, becoming down slope/down valley at 1 to 3 mph by morning.

**CHANCE OF WETTING RAIN:** 20% - LAL: 4 in the evening, decreasing to 2 by midnight.

**STABILITY/INVERSION:** Inversion developing after midnight with poor dispersion.

## **Extended Forecast:**

Sunday will bring higher relative humidities to the area as a low pressure system in the Gulf of Alaska slides further to the east. This will also bring additional thunderstorms to the area. Temperatures begin to cool slightly on Monday and continue to cool next week as the ridge of high pressure over northwest Canada slowly weakens.

If you have Fire Behavior or Wx Observations, please take a picture and text to me with location. Thx! Patrick Doyle, cell # 530-310-3552

**WEATHER SUMMARY:** \*\*\*\* RED FLAG WARNING \*\*\*\* Extended – for Lightning & Dry Fuels thru midnight

**Temps:** Mid 70s to low 80s; **RH:** High 20s to low 40s; **LAL** 4; **CWR** 20% *see IMET Fire Weather Forecast*  
**Winds:** Calm AM turning S-SW 4-8 mph after noon. Potential for strong, gusty erratic wind in the vicinity of thunderstorms.

### OUTPUTS

**FIRE BEHAVIOR** \*\*\* Fire & Fuels Behavior Advisory extended (will add to IAP when available)

**GENERAL:** \*\*\* Critical Fire Weather Day (>80° F and <30% Rh likely in afternoon) \*\*\*

**Fuels and Terrain:**

- **Black Spruce** – Primary driver known for extreme flammability, rapid rates of spread, torching and crown fire. Significant ember source for spotting up to ¼ mile or more.
- **Mixed Hardwood Forest (Aspen/Birch/Poplar)** – Mixtures of hardwoods with spruce will carry fire through backing, flanking and torching. Hardwoods with little to no conifer component will resist/reduce fire spread and intensity. Act more like a damper or barrier.
- **Burn Scars** – Many fire scars intersect the existing fire area and will have variable effect on fire spread and growth depending on age of fire scar and vegetation available.

Fire Danger Index (CFFDRS)	Value	Trend	Interpretation
Fine Fuel Moisture Code (FFMC):	93	up 3	Below 74, little chance of ignition or surface fire spread with open flame. Active spread in light fuels at 80. Ignition potential high at 90 and <i>extreme fire behavior expected at 92.</i>
Build-up Index (BUI):	130	up 4	Fuel availability and flammability. Seasonal severity. Used in Fire Behavior Predictions.

**Critical Fire Weather Thresholds: temperature 80° F or higher, and relative humidity 30% or lower.**

Runs use Chatanika RAWS with FFMC 93 and BUI 130; ROS (no precip.)

Fuel Type (FBS)	5 mph wind (*head-fire)	10 mph wind*	20 mph wind (T-storm outflow)*
Black Spruce (C-2)	ROS: 43-80 ch/hr	ROS: 0.9-1.6 mph	ROS: 2-2¼ mph
Mixed Hardwood/Spruce (M-2) ≥50% spruce	ROS: 14-26 ch/hr	ROS: 24-43 ch/hr	ROS: ¼ - 1½ mph
Old Burn Scars (O-1b) 50% cured, 0 t/a	ROS: 5-10 ch/hr	ROS: 9-17 ch/hr	ROS: ½ - ½ mph

**SPECIFIC:**

**Div-A (SW Corner of Fire):** Smoldering, creeping, and backing continuing on the Northwest side of the river from the boat launch along the Chatanika River. Do not expect any significant movement here unless impacted from outflow winds associated with thunderstorm (T-storm) activity.

**Div-E, H (North Flank of fire):** Residual heat is still evident in Washington and Aggie Ck drainages. To the NE along these drainages potential torching and crown runs in the black spruce are possible where slope and Spruce timber-stringers align if humidity drops to or below 30%. Active spread between Washington creek and Tatalina river.

**Div-Z, T (East flank):** Expect increased activity where heat exists near the line. Mixed hardwoods with little to no spruce component is acting as a barrier to fire movement and spread. Duff fuel moisture is extremely low, allowing for fire spread when temps are high and humidities are low. Heat is holding over in the duff. Backing and flanking will continue in mixed hardwood stands that are more open or with greater than 50% spruce component. Some torching could be possible here but should be isolated with general wind forecast.

**AIR OPERATIONS:** Smoke (varies) and t-storm activity may limit air operations.

### SAFETY

There is a high degree of confidence that it will be a critical fire weather day. Four metrics for assessing large fire growth potential and associated rapid rates of spread forecasted this afternoon. When temperatures are greater than 80° F, humidities less than 30%, Fine fuel moisture (FFMC) is greater than 88 and build up index (BUI) is greater than 80. Plan for this alignment in the afternoon!

## SAFETY MESSAGE

*Fire fighter safety comes first on every fire, every time*

### Major Hazards and Risks:

**Drift Mines-** Early century vertical mine shafts. Reported throughout fire area and unmarked. Tailings pile or pond can be a sign that there's a mine shift in the area. If you find one flag off the area and share the information to fire personal.

**Ignitions** – Ensure all involved receive a good briefing and that L.C.E.S. is in place prior to engaging. Wear all of the appropriate PPE. Maintain good communications with adjacent resources. Burning around structures for point protection requires extra coordination.

**COVID-19:** Make sure you follow your agency policy on COVID-19 prevention. Be mindful of yourself and other firefighters. Be that person to help protect your fellow workers. If you feel you might have symptoms get a self test and isolate from others. If you need assist please contact medical.

### Aviation Awareness:

- Ensure good communication with aircraft
- Approved Helispots known and ready
- No trash in Helispot landing areas
- Watch for rotor wash on tank or bucket drops
- Trained Longline Personnel for crew cargo
- Medical Emergency Hoist Operations Lat/Long
- Fix Wing Aerial Water Drops; stay clear and watch for rolling rocks, tree limbs and tops
- Paracargo Operations make known where the drop zone is and stay clear of drop zone area

### Work Assignments

- If you are working near heavy equipment, stay at least 100 feet in front and 50 feet behind equipment. In timber, distances should be increased to 2 1/2 times the canopy height.
- Never approach equipment until you have eye contact with the operator.
- Know the capability of your crew! Work within those limits.
- Read the medical plan, it works well if needed.
- Fatigue is managed by following work rest guidelines.
- When towing trailers make sure you check all safety pines and safety chains are attached to both trailer and tow vehicle. Check rear trailer lights make sure there working.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. **Communications Unit Phone: 206-260-1132**
