### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

- Overall fire activity is minimal from precipitation today. The fire area does have small areas of heat and fire holding in deep, exceptionally dry duff and heavy fuels. The area could support occasional flare ups and torching, but will be reduced dramatically as precipitation continues.
- Fires that are smoldering and holding in deep duff are resistant to control and extinguishment and are typically duff driven and susceptible to seasonal severity.
- The fire area will be experiencing significant forecasted precipitation over the next week as a seasonal weather pattern transitions into a wetter southwest flow. This pattern is typically associated with a season ending pattern, but as the duff is extremely dry, it will take several days of consistent and measurable rainfall to extinguish the fire smoldering in the duff.

Fire Danger Indices (CFFDRS)	Today's (Projected)	Trend	Interpretation <small>Note: projected indices are calculated prior day for 14:00pm AKDT</small>
Fine Fuel Moisture Code (FFMC):	49 (Low)	Down 37	Below 74, little chance of ignition or surface fire spread with an open flame. <i>Active spread in light fuels at 80. Ignition potential high at 90</i> and extreme fire behavior expected at 92.
Build-up Index (BUI):	35 (low)	Down 30	Fuel availability and flammability. Seasonal severity. Used in Fire Behavior Predictions.

Fuel Type (FBS)	5 mph wind (*head-fire)	10 mph wind*	20 mph wind (T-storm outflow)*
Black Spruce (C-2)	ROS: 8-15 ft/hr	ROS: 15-29 ft/hr	ROS: 50-96 ft/hr
Mixed Hardwood w/50% Spruce (M-2)	ROS: 5-11 ft/hr	ROS: 9-17 ft/hr	ROS: 29-17 ft/hr
Old Burn Scars (O-1b) 50% cured, 0 t/a	ROS: 1-2 ft/hr	ROS: 2-5 ft/hr	ROS: 9-18 ft/hr

Note: 80 chains (ch) in a mile (mi); a chain (ch) is 66 feet (ft).

#### Important thresholds:

<b>Critical Fire Weather (Temp/Rh) - rapid spread &amp; crown fire</b>	greater than 80° F	less than 30% Rh
<b>CFFDRS Indices - Correlated Large Fire Growth</b>	greater than 88 FFMC	greater than 80 BUI

##### SPECIFIC:

**DIV-A (SW Corner of Fire):** Minimal fire activity throughout the division.

**Div-E (North Flank of fire):** Some residual heat is still evident in Washington and Aggie Ck drainages. Most active spread between Washington creek and Tatalina river in boggy meskag, near the Tatalina river.

**Div-Z (South flank):** Minimal fire activity throughout the division, with pockets of heat near Div-Z/T break. Pockets of heat can still be problematic if near.

**AIR OPERATIONS:** Cloudy skies with occasional rain showers may impact air operations.

#### SAFETY

Watch footing in areas of excessive ash, as they may become slippery from precipitation.

**Incident:**  
Minto Lakes Fire AF-FAS-211349

**Date:**  
7-16-2022 to 7-17-2022

**Operational Period:**  
0800-0800

## ***SAFETY MESSAGE***

*Fire fighter safety comes first on every fire, every time*

### **Major Hazards and Risks**

**Complacency** – We are currently getting cooler wetter weather. **DON'T BECOME COMPLACENT!** There are many hazards still out there.

**Wet Weather** – With wetting rains increasing each day, do you have a plan for the following: Will the dirt road you're using be drivable in wet conditions? Do you have an alternate travel plan for a medical emergency? Is your sleeping area good for wetting rains? Do you have enough food and water if the supplies can't make it to spike camp? Please take the time to get ready before the wetting rains arrive.

### **DRIVING & FATIGUE**

- Make sure you are getting your rest when you Can! Stick to work/rest guidelines.
- Fatigue can cause us to mentally stray from the driving task.
- It only takes a second of distraction to lose control of our vehicle. The faster you are traveling, the faster you get in trouble.
- Make sure you recognize when you are too tired to drive!
- Don't tough it out and put yourself and your passengers at risk!
- Slow down, take breaks, and talk to your passengers. If possible, keep an alert passenger in the front seat next to you. Know your limits.

### **Base Your Action On Current Weather**

Don't base your plan on the availability of aircraft for success in bad weather.

Do you have an alternate plan if the roads are not drivable.

While driving in rain make sure your maintaining safe following distances of 4 seconds or more.

You might need to change your tactics do to wet weather.

Just like flying, weather can cancel you boat mission. Visibility such as fog and heavy rain.

Do not be fooled by 1 inch of rain. A lot more is needed to put a fire out in Alaska.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. **Communications Unit Phone: 206-260-1132**
