High temperatures will be significantly cooler, mainly in the low to mid 60s, with a few upper 60s in valley locations. Relative humidities will be slow to drop as the rain continues through mid-morning, though they will eventually drop into the 40% range by late afternoon under mostly clear skies behind the cold front.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

More moisture early this morning will continue the trend we have been seeing the last couple days. Minimal fire activity overall. Except for a few isolated areas where heat is holding and there is occasional torching. Be "heads up" today for much higher winds than what we have experienced over the last 10 days in the morning and afternoon.

This will assist in drying out some of the early morning moisture from the fuels. Do not expect this to increase fire activity to much, except for those few pockets of hold-over heat and residual activity. Mainly you will see little fire activity and conditions not conducive for spotting or rapid rates of spread.

Fire Danger Indices (CFFDRS)	Today's (Projected)	Trend	Interpretation
Fine Fuel Moisture Code (FFMC):	67 (low)	down 6	<i>Below 74, little chance of ignition or surface fire spread with an open flame.</i> Active spread in light fuels at 80. Ignition potential high at 90 and extreme fire behavior expected at 92.
Build-up Index (BUI):	52 (moderate)	down 7	Fuel availability and flammability. Seasonal severity. Used in Fire Behavior Predictions.

Note: projected indices are calculated prior day for 14:00pm AKDT

Fuel Type (FBS)	5 mph wind (*head-fire)	10 mph wind*	20 mph wind (T-storm outflow)*
Black Spruce (C-2)	ROS: 2-3 ch/hr	ROS: 3-6 ch/hr	ROS: 10-18 ch/hr
Mixed Hardwood w/50% Spruce (M-2)	ROS: 1-2 ch/hr	ROS: 1-3 ch/hr	ROS: 5-10 ch/hr
Old Burn Scars (O-1b) 50% cured, 0 t/a	ROS: 0-1 ch/hr	ROS: 0-1 ch/hr	ROS: 2-3 ch/hr

Note: 80 chains (ch) in a mile (mi); chain (ch) is 66 feet (ft).

Important thresholds:

Critical Fire Weather (Temp/Rh) - rapid spread & crown fire	greater than 80° F	less than 30% Rh
CFFDRS Indices - Correlated Large Fire Growth	greater than 88 FFMC	greater than 80 BUI

SPECIFIC:

DIV-A (SW Corner of Fire): Minimal fire activity throughout the division.

Div-E, H (North Flank of fire): Some residual heat is still evident in Washington and Aggie Ck drainages. Most active spread between Washington creek and Tatalina river in boggy meskag, near the Tatalina river.

Div-Z, T (East flank): Minimal fire activity throughout the division. Pockets of heat can still be problematic in the afternoon when the winds pick back up.

AIR OPERATIONS: Smoke (varies) and winds may limit air operations.

SAFETY

The fact that fire behavior subsiding doesn't mean the hazards are reduced. Many fire-weakened trees are left with the fire perimeter. Be aware and ensure work areas are cleared of snags prior to engaging. Especially with today's winds!

Incident:
Minto Lakes Fire AF-FAS-211349

Date:
7-13-2022 to 7-14-2022

Operational Period:
0800-0800

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

Major Hazards and Risks

Wind Event: With the increase in wind, make sure you plan accordingly. Make sure all spike camps are in a safe location away from fire weakened trees. Have a safe place to exit and stage if your work area is unsafe.

Hydration: With lowering temps and higher relative humidity, don't be fooled not to drink fluids, you can still get dehydration.

Boating Hazards – Follow all direction given from boat operator. Make sure all passengers are wearing a Personnel Floatation Device. All it takes is one sharp maneuver and you can find yourself in the water. Assist the operator by looking for floating debris and rock bars. Is the boat operation part of your approved mission?

IWI-Incident Within an Incident

As the fire behavior slows down, the hazards and operations change. What does not change is the constant threat of experiencing an incident within the incident. Are you ready?

- Discuss the process with your crew
- Know and brief the communication plan to request assistance.
- Teach the procedure to others in case it is you that needs help.
- Consider your position on the fire relative to reflex time of resources.
- Be clear about your needs when initiating an IWI.

Train like you fight so you'll fight like you've trained!

Wet Feet

- Wet feet lead to foot rot.
- Change socks often, dry boots when off shift, and dry feet after shift.
- Apply foot powder and moisturizer.

To keep foot skin from rotting use bag balm or foot cream.
- If using shower unit, try to use shower sandals to avoid athlete's foot.
- Keep your feet clean and dry by using sandals after shift.
- Get with supply or medical for foot treatment options.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed. **Communications Unit Phone: 206-260-1132**
