ASH PITS HAZARDS

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

Environmental factors that increase the risk of ash pit formation after a wildfire:

- Extensive root systems of trees and shrubs.
- Deep duff, peat, forest litter and tundra which are the organic layers covering mineral soils.
- Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards, or decking areas.
- Animal dwellings that have become filled with decadent combustible debris.
 - Small rodent holes,
 - Beaver holes near dams and stream beds, or
 - Badger and coyote dens.
- White ash is sometimes an indicator of ash pits, as are swarms of hovering insects.
- With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
- Ash pits often give off the smell of incomplete combustion or of creosote burning.

Mitigation measures to consider:

- Identification of high-risk landscapes.
- Identify and flag all hazardous discovered ash pits.
- Utilize hand tools to check depth of suspected ash pits

Incident Action Plan Safety Analysis (ICS 215A)

5. Incident Area	6. Hazards/Risks	7. Mitigations	
To fire area from Fairbanks, AK	Driving	Extended drive time w/ limit visibility and wildlife. Drive with headlights on at a speed conducive for road conditions.	
Fire #252 / #259	Driving	Paved roads w/ transitions to loose gravel / dirt roads. Drive with due regard w/ space between vehicles.	
Fire #252 / #259	Footing in duff / forest litter / tundra. 4' ash pits.	Ensure three points of contact, evaluate depth of ash pits before stepping in ash. Sheath all hand tools.	
Fire #259	SNAGS / Tree root systems are weakened, interwoven and shallow.	Eliminate the hazards with qualified sawyers. Avoid hazards by designating "No Work Zones". Keep clear of bucket drops near trees/ snags.	
Fire #252 / #259	LCES	Elevations of 1,000 ft. or lower. Ensure a lookout is in place with good LCES.	
Fire #252 / #259	Rivers, streams and body of waters	These are not to be considered or used as a viable "safety zone". Establish a clear safety zone and escape route.	
Fire #252 / #259	Aircraft	Refer to page 61 in your IRPG for safely working in and around aircraft.	
Fire #252 / #259	Weather systems, Red Flag warnings and isolated thunderstorms.	Take shelter in a vehicle or building if possible. Find a low spot away from trees, keep your distance twice the tree height.	
Fire #252 / #259	Medical / IWI	Extended medical evacuation times. Consider early treatment and transport type. Review and understand the medical plan!	
Fire #252 / #259	Bears, Wolves, Moose	Do not feed the wildlife, travel with a partner at all times. If you encounter wildlife make yourself as big as possible, make noise and slowly back down.	
Fire #252 / #259	Firefighter mental and physical health	Ensure all personnel are engaged and are mentally and physically prepared for the tasks assigned.	
Fire #252 / #259	Watch-out - Transition Day	Its transition day, know where you are assigned, who you work for and what you are doing.
