FOOT ROT (TRENCH FOOT)

Trench foot (immersion foot syndrome) is a serious condition resulting from your feet being wet for too long. It causes damage to the circulation and nerve function of the foot.

With trench foot, you'll notice some visible changes to your feet, such as:

1. Blisters
2. Blotchy Skin
3. Redness

Additionally, trench foot can cause the following sensations in the feet:

1. coldness
2. heaviness
3. numbness
4. pain when exposed to heat
5. persistent itching
6. tingling

Early symptoms of trench foot can also be treated with [home remedies](#). According to the U.S. [Centers for Disease Control and Prevention](#), you can employ some of the same techniques as you would with frostbite. Here's what you should do:

1. take off your socks
2. avoid wearing dirty socks to bed
3. clean the affected area right away
4. dry your feet thoroughly
5. apply heat packs to the affected area for up to five minutes

If symptoms of trench foot fail to improve after home treatments, it's time to seek medical care.
