SAFETY MESSAGE

06/27/2025

Lookouts, Communication, Escape routes, Safety zones

- **Continually maintain good LCES throughout your assignment.** Changing weather and fire conditions have the potential to expose you to new hazards and/or concerns. Have a contingency plan for these changes ahead of time.
- 1. **Lookouts:** Post lookouts when feasible to monitor fire behavior, changing weather, etc.
- 2. **Communication:** Emergency traffic (8 line) goes through Galena IA Dispatch. Keep good comms with local resources.
- 3. **Escape Routes:** Make sure escape routes are known and free of trip hazards (flush cut stumps) when possible.
- 4. **Safety Zones:** Make sure safety zones can accommodate the resources that would be needing to use it. Avoid using rivers as safety zones, due to potential strong water currents and cold temperatures.

Ground hazards

(The following list below highlights some of the Hazards you could encounter)

- **Footing** in these fuel types can be treacherous, especially due to unstable ground (Tundra and Grass clumps for example). Take your time, look where you are walking and use your hand tool for stability. Avoid wet areas when possible.
- Burned out roots or duff can cause **falling trees** with little to no warning.
- Don't get below **aircraft** sling loads or water drops. Especially from airtankers and heavy helicopters and their rotor wash.
- **Wild animals** such as bears and moose can be extremely dangerous. Keep a clean camp to avoid attracting bears and other animals. Avoid putting yourself in situations that can agitate aggressive animals.
- **Insect bites**, bug nets and bug spray will help.
