FIRE WEATHER FORECAST

FORECAST NO. 3

NAME OF INCIDENT: Shelly

PREDICTION FOR: Monday July 8, 2024

UNIT: Klamath National Forest

TIME AND DATE

SIGNED: Julia E. Ruthford

FORECAST ISSUED: 1900 Sunday 7/7/24

Julia Ruthford – (530) 440-4898
Incident Meteorologist

*** Excessive Heat Warning through Tue with Very Unstable Afternoon Conditions Continuing ***

WEATHER DISCUSSION: The strong upper level ridge will continue to gradually shift eastward today but remain close enough to continue to bring very hot and unusually dry conditions to the Shelly Fire. Afternoon instability will continue increasing in response to the movement of the ridge bringing very deep vertical mixing potential in the afternoon. Mid level moisture will continue to be extremely limited though a slight increase in it will bring the potential for pyrocumulus development on the top of the smoke column. Winds will be largely terrain driven today but will be enhanced due to the hot temps and very dry and unstable atmosphere.

MONDAY:

WEATHER: Continued hot & dry with very unstable conditions in the afternoon.

MAXIMUM TEMPERATURE: Highs ranging from the upper 80s along ridges to lower 100s valleys.

MINIMUM RELATIVE HUMIDITY: 7-9% in valleys and 10-15% along ridges.

20 FOOT WINDS:

Branch 10 (NE of the PCT) – Up-slope winds of 3-5 mph developing mid morning with E-NE up-canyon 5-8 mph in the afternoon gusting to 10-15 mph with battling winds along the PCT ridge.

Kidder Creek Drainage - Up-canyon winds (E-SE upper & E-NE lower canyon) will increase to 7-9 mph late morning through early afternoon then shift to W-NW to W-SW down-canyon 10-15 mph between 1400 & 1500.

Branch 20 (SW of the PCT) – Up-slope winds of 4-7 mph developing late morning will become SW up-canyon 7-11 mph early afternoon with gusts of 15-20 mph possible mid to late afternoon. A shift to NW winds along ridges and through NW to SE oriented drainages will bring battling winds in the afternoon & evening.

STABILITY: Valley inversions lifting mid-morning then becoming unstable with the potential for deep vertical mixing mid to late afternoon continuing to increase and converging terrain driven winds further enhancing instability.

CHANCE OF RAIN: 0% **LAL:** 1 **SMOKE TRANSPORT WIND:** Terrain driven becoming NW 10-15 mph.

MONDAY NIGHT:

WEATHER: Continued warm with strong thermal belts and poor RH recoveries.

MINIMUM TEMPERATURE: Mid 70s along slopes & ridges and upper 60s in valleys.

MAXIMUM RELATIVE HUMIDITY: Around 25% slopes & ridges and 40% valleys.

20 FOOT WINDS: NW winds of 10-15 mph with localized gusts of 20 mph along the ridges in the evening becoming NE 4-7 mph along ridges and downslope/down-valley 2-4 mph elsewhere after 2100.

STABILITY: Smoke accumulating in valleys and thermal belts.

CHANCE OF RAIN: 0% **LAL:** 1 **SMOKE TRANSPORT WIND:** NE 5-10 mph.

TUESDAY: Continued hot and dry though a few degrees cooler as compared to Monday with high temps ranging from the mid 80s along ridges to around 100 in the valleys. Min RHs 11-14% with overnight RH recoveries 25-30% along slopes and ridges and 40-45% valleys. Enhanced terrain driven winds similar to Monday will continue to dominate much of the fire area with southerly winds of 10-15 mph in Scott Valley during the afternoon.

OUTLOOK FOR WEDNESDAY THROUGH SATURDAY: A gradual increase in mid level moisture will continue through the week and when combined with continued very warm and unstable conditions during the afternoons will increase the potential for pyrocumulus formation over the fire and bring a chance of isolated thunderstorms by Fri & Sat. SW to NW afternoon and evening winds along ridges and through channeled terrain gaps will increase Wed-Fri with a slight cooling influence as the onshore pressure gradient to the west increases. RHs will moderate slightly through this period but still remain concerningly dry.

Please email weather observations to julia.ruthford@usda.gov or text them to 530-440-4898. Thanks!

FIRE BEHAVIOR

GENERAL:

- Critical fire day: environmental conditions are in place that support large fire growth. Hot and dry daytime conditions with very low nighttime humidity recoveries and fuels where available will support active fire behavior (torching, short range spotting and crowning) and rapid rates of spread.
- Very poor night-time relative humidity (Rh) recoveries (see Fire Wx Forecast) and hot dry conditions will continue to dry out fuels. Increasing receptiveness to spotting and resistance of control. Expect increase availability of heavier dead fuels, such as logs and snags, to be ember receptors for short- and long-range spotting and threat to containment lines.

SPECIFIC:

Branch X (DIVS C & E): Active fire growth in the Kidder Creek drainage, ensure you know where your safety zones, ingress/egress routes are. Fuels continuity and composition of live (shrub and forest vegetation) and dead fuels (1, 10, 100hr size class) will see active growth through surface fire spread, spotting, and torching. Primary fire growth will be driven by this same fuel continuity, with daytime diurnal winds, and afternoon local ridgetop winds (W-NW to W-SW).

Branch X (DIVS A,G,T): Fire activity is being moderated by sparse fuels from the 2017 Wallow fire, expect areas with jackpot of heavier concentrations of dead & down fuels to be resistant to suppression. On steep slopes these will be potential source of rollout on steep slopes and uphill runs.

AIR OPERATIONS:

Inversion in the morning, clearing briefly, before air operations become potentially impacted by smoke on the eastside of the fire.

Sunrise: 5:46am, Sunset: 8:46pm, Daylength: 15 hours, 00 minutes, 38 seconds (-1:04min)

SAFETY:

As resources begin to shift to keep up with fire progression many will find themselves in unfamiliar areas. Make sure you know the fuel types and burning conditions in those areas and more importantly know your ingress/egress routes before fire behavior forces you to use them. Ensure LCES is known is in place.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

We are **ALL** accountable for **SAFE** behaviors
For Day/Night Operations: **July 8, 2024**

Unburned Fuel Between You and The Fire

It is important for firefighters to recognize Watch Out Situation #11, unburned fuel between themselves and the fire. Often it is not possible or practical for direct attack on a fire. Before attempting indirect attack and any time the firefighter is in a position where there is unburned fuel between them and the fire, the following questions must be addressed immediately:

- Can you see the fire or are you in contact with someone who can? Discuss situations you might find yourself in where you are out in the green and cannot see the fire. What can you do?
- Is fire spread in a direction away from you? Do you consider the potential for fire spread? Are you safe if the wind switches?
- Will your position be defensible when the fire reaches you? Talk about what must be understood when building indirect line or approaching a fire through the green.
- Is your line anchored? Discuss how you anchor indirect line.
- Are your escape routes and safety zones adequate? What is adequate?
- Are weather indicators constantly changing?
- To reduce the risks:
 - Post lookouts.
 - Consider a different location.

Look Up, Down, and Around.

Take time during critical burn period to stop and look around.

Fire Environment Factor: Weather Indicators

- Lenticular clouds
- Fast moving clouds
- Cold frontal passage indicated by weak vortices and changing temps.

- Critically low humidity based on local thresholds

Atmospheric Instability

- Instability concerns reported in the forecast or observed in the field
- Good visibility
- Dust devils
- Cumulus clouds
- Castellanus clouds in the morning
- Smoke rising straight up
- Inversion begins to lift
