***** RED FLAG WARNING IN EFFECT 11AM THROUGH 9PM TODAY FOR LIGHTNING ON DRY FUELS *****

WEATHER DISCUSSION: Lingering monsoonal moisture will bring a final round of isolated thunderstorms this afternoon and evening. In addition to a risk of new ignitions from lightning, thunderstorms would bring the potential for strong, gusty and erratic outflow winds, which could channel a substantial distance through the complex terrain in the area. Otherwise, a warm and dry day is expected with temperatures in the 80s and 90s and minimum RHs near to below 20%. Outside of thunderstorms, an onshore pressure gradient will bring SW-NW ridge level and down-canyon winds this afternoon & evening. Recoveries will remain poor to at best fair tonight.

MONDAY:

WEATHER: Isolated dry thunderstorms after 1200. Storms will initiate near and anchor to terrain features then gradually move SW to NE. *Rainfall less than a tenth of an inch, but locally quarter of an inch under cores.*

MAXIMUM TEMPERATURE: Highs ranging from upper 80s along ridges to upper 90s valleys.

MINIMUM RELATIVE HUMIDITY: 9-15% in valleys and 15-21% along ridges.

20 FOOT WINDS:

SW of the PCT – Up-slope winds of 3-5 mph developing late morning will become SW-NW up-canyon 6-12 mph early afternoon with gusts of 14-20 mph possible mid to late afternoon.

NE of the PCT – Up-slope winds of 2-4 mph becoming SE to NE up-canyon 4-6 mph early afternoon then reversing to SW to NW around 1400 and increasing to 10-18 mph with gusts to 20-25 mph late afternoon through the evening along ridges and down-canyon winds of 5 to 7 mph drainage bottoms.

Near any thunderstorms – *Strong outflow winds possible with gusts of 30 to 40 mph.* Directions will be erratic but favoring SE to SW for the strongest gusts.

STABILITY: Smoky valley inversions lifting by early afternoon. Inversion lift may be a couple of hours slower than Sunday. *PyroCumulus development is likely if a strong column forms.*

CHANCE OF THUNDERSTORMS: 35%

SMOKE TRANSPORT WIND: NE-SE 5 mph to S-SW 8-14 mph

MONDAY NIGHT:

WEATHER: Warm and dry with mid slope thermal belts and poor to fair RH recoveries.

MINIMUM TEMPERATURE: Upper 60s to low 70s along slopes & ridges and mid to upper 60s in valleys.

MAXIMUM RELATIVE HUMIDITY: Around 28-36% slopes & ridges and 44-52% valleys.

20 FOOT WINDS: SW to NW 8-14 mph diminishing around 2100 then becoming N-NE 4-6 mph along ridges with downslope/down-valley 2-4 mph elsewhere.

STABILITY: Smoke settling into the area valleys including Scott Valley.

CHANCE OF THUNDERSTORMS: 10%

SMOKE TRANSPORT WIND: S-SW 8-10 mph to light NE-SE

TUESDAY: A potent shortwave trough will track just northwest of the region, bringing concern for windier conditions. Winds will be light and terrain driven in the morning, but afternoon southerly winds of 20 to 30 mph with gusts of 35 to 40 mph are possible both up the Scott Valley and on upper slopes and ridgelines. Remaining warm, highs ranging from mid to upper 80s along ridges to mid to upper 90s in valleys. Min RHs 17-23% with poor to fair overnight recoveries around 35-45% along slopes and ridges, and 48-58% in valleys. Winds diminishing overnight with more typical downslope/down-valley flows developing.

OUTLOOK FOR WEDNESDAY AND THURSDAY: Troughing to the northwest and ridging to the east will bring onshore pressure gradients with breezy SW to NW afternoon & evening winds along ridges and through channeled terrain. Temperatures will remain warm with highs in the mid 80s ridges to mid 90s valleys. RHs will stay fairly dry, with min RH in the 18-28% range and overnight recoveries 35-45% along slopes and ridges.

Please email weather observations to julia.ruthford@usda.gov or text them to 530-440-4898. Thanks!

FIRE BEHAVIOR

GENERAL:

- Red Flag Warning: for abundant lightning on dry fuels (see Fire Wx Forecast).
- New starts from lightning or outflow winds from passing thunderstorm activity may impact fire behavior and growth. Consider potential impacts to your location and fire behavior. Strong outflow winds 30-40mph can cause change fire behavior and spread very quickly. Examples are by causing flare-ups, rapid rates of spread, increasing spotting/torching or changing fire spread direction.
- Fire activity could potentially be moderated by similar conditions as yesterday's passing thunderstorm activity. Increased cloud cover, increase daytime humidity and light precipitation. Which dampened fire behavior to significantly in fine dead fuels (1 & 10hour fuels) to moderate spread.
- Fuels are still very dry and receptive. Concern is for torching, spotting, or slope-reversals that can lead to uphill runs, torching, more spotting or crown runs.

SPECIFIC:

Branch X, DIVS A, B, C:

Upper Kidder and Mill Creek will be active in the timbered fuels where continuity provides for favorable nighttime burning conditions. Backing, flanking, potential for active growth in the afternoon with increase in activity, such as individual/group torching and spotting.

Branch XX, DIVS D, E, F:

Active fire growth in the Patterson Creek drainage, southside of ridge backing, consuming heavy's and occasional torching and spotting in area where fire pushed across ridgetop. Expect greatest activity in Section 23 upper Patterson Creek where alignment of fuels, slope and diurnal winds will support active fire growth. East aspect and upslope diurnal winds and low fuel moistures will support early activity (if skies are clear).

Branch XXX, DIVS G, M, T:

Lowest fire perimeter in Right Hand North Fork Salmon river, just west of Bear Wallow Peak, good potential for fire to spot across river and establish on westside of river.

AIR OPERATIONS: Inversion in the morning, air operations impacted by smoke.

Sunrise: 5:51am, Sunset: 8:43pm, Daylength: 14 hours, 51 minutes, 41 seconds (-1:25min)

SAFETY: Fire behavior may dictate indirect tactics in very challenging terrain. Maintain situational awareness and LCES when working in area with unburned fuels in-between resources and the fire.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

We are **ALL** accountable for **SAFE** behaviors
For Day/Night Operations: **July 15, 2024**

Exposure and Effects of Smoke

Smoke has both short and long-term negative health effects. The greatest smoke exposures are direct attack, line holding, burnout activities, and during inversions. While it may be “part of the job”, you can limit your exposure:

- Rotate personnel out of the worst smoke.
- Whenever possible, wait for heavies to burn down before mop-up.
- If you’re close enough to an ignition source to have watery eyes and snotty nose, you are also being exposed to carbon monoxide (CO).
- Monitor yourself and each other for CO exposure symptoms, including **headache, dizziness, nausea, and confusion.**

Driving Habits

- Back your vehicle into parking spaces and use a backer when possible.
- Everyone in the vehicle needs to wear a seat belt before the tires roll.
- Watch your speed, recognize the posted speed limit and adjust your speed for current conditions.
- Maintain safe following distances
- Eliminate driver distractions
- Put your cell phone away if you are driving, it’s the law.
- When driving past a closure, for example **Kidder Creek Rd.** off Highway 3, please slow down or stop.

Planning for Medical Emergencies

Ask and be able to answer these 3 questions:

- 1. What are we going to do if someone gets hurt?**
- 2. How will we get them out of here?**
- 3. How long will it take to get them to a hospital?**

All operational activities should be based on answers to these questions. See page 2 of the IRPG for more information.

HELICOPTER EXTRACTION OPERATIONS

The intent of helicopter insertion/extraction operations is to facilitate the movement of personnel to and from inaccessible areas. These operations are not meant to be a medical transport resource; life flight and ground transportation should always be ordered in addition to the extraction aircraft and crew.

ORDERING:

- On-scene EMT and/or Incident within Incident IC determines that an extraction helicopter is needed and places the order through the pre-established procedures:
 - Division Supervisor
 - Incident Communications
 - Dispatch Center
- When ordering extraction aircraft provide the following information:
 - Location (Lat/Long) of patient
 - Known Hazards
 - Wind Speed and Direction
 - Terrain
 - Incident Updates

SITE SELECTION:

- The helicopter crew will confirm the extraction location when they arrive on scene. However, a general rule is any clearing that is 10'x10' with visible sight lines to the sky is a suitable extraction site.
- If the terrain is steep, excavating a platform or shelf can make it easier for patient packaging.

QR Code-Short-haul Site Selection Video

CONSIDERATIONS:

- Short-haul and hoist are safe and efficient operations for extracting injured personnel of any severity including "Green" patients.
- Ensure area is clear of non-essential items, hazards, and personnel.
- Rotor wash may affect overhead hazards and blowing dust/debris can create brown out conditions or influence fire behavior.
- Aerial Supervision is valuable for coordinating aviation medevac/extraction missions and should be ordered if available and not currently present.
- The aircrew will make the final assessment of the mission. Always have a contingency plan in case a helicopter cannot complete the request.

DEFINITIONS:

Rescue Hoist: A cable winching device mounted to the helicopter that can lower/raise persons attached to a cable.

- Common cable lengths are 250-300 feet.

Short-haul: To insert or extract one or more persons suspended on a fixed line beneath a helicopter.

- Common short-haul line lengths are 100, 150, and 250 feet. The lines can also be connected for a longer line if the situation requires it.
