Time From:	0700	Time To:	0700						

3. Objective(s):

Leaders Intent

- Implement a full suppression strategy on the Shelly Fire. Values at risk include human safety, private timberlands, communities, cultural, and wilderness areas. Apply tactics that offer the highest probability of success.
- All incident assigned personnel should be prepared to take appropriate actions regarding:
 - Personal safety and the safety of others, including driving slowly and defensively.
 - Professional behavior, conduct, and timely / effective communication.
 - Manage fatigue by taking breaks and maintaining work / rest cycles.
 - Provide the highest level of customer service to all involved with or impacted by the Shelly Fire.

Management Objectives

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Coordinate all public information to provide timely and continuous information to affected agency partners, cooperators, and to the public.
- Coordinate suppression activities with assigned incident resource advisors to minimize impacts on natural and cultural resources.
- Maintain relationships with partner agencies, elected officials, organizations, tribes, neighboring landowners, and community groups and members.

Control Objectives

- To limit fire growth and to prevent the fire from spreading to private property, surrounding communities and values at risk, keep the Shelly Fire:
 - North of Sawyer's Bar Road
 - South of Scott River Road
 - East of Bear Wallow Peak
 - West of Highway 3

IMET (t)

IMET

***** RED FLAG WARNING IN EFFECT THROUGH 11PM TONIGHT FOR LIGHTNING ON DRY FUELS *****

WEATHER DISCUSSION: An upper level disturbance combined with very unstable conditions and mid level monsoon moisture moving into the area will bring a scattered dry thunderstorms this morning through evening. Thunderstorms will be high based with the potential for strong, gusty and erratic outflow winds to channel a substantial distance through the complex terrain in the area. Surface conditions will remain hot and dry despite the moisture aloft. Outside of thunderstorms, a continued onshore pressure gradient will bring breezy SW-NW ridge level and down-canyon winds this afternoon & evening. Recoveries will remain poor to at best fair tonight.

SUNDAY:

WEATHER: Scattered dry thunderstorms. Storms this morning will move quickly south to north. Storms this afternoon will initiate near and anchor to terrain features at first but still gradually move south to north. *Spotty rainfall amounts less than a tenth of an inch, but locally a quarter of an inch under stronger cores in the afternoon.*

MAXIMUM TEMPERATURE: Highs ranging from upper 80s along ridges to upper 90s valleys.

MINIMUM RELATIVE HUMIDITY: 15-20% both ridges and valleys.

20 FOOT WINDS:

SW of the PCT – Up-slope winds of 3-5 mph developing late morning will become SW-NW up-canyon 8-14 mph early afternoon with gusts of 16-22 mph possible mid to late afternoon.

NE of the PCT – Up-slope winds of 2-4 mph becoming SE to NE up-canyon 4-7 mph early afternoon then reversing to SW to NW around 1400 and increasing to 14-18 mph with gusts to 20-25 mph late afternoon through the evening along ridges and down-canyon winds of 5 to 7 mph drainage bottoms.

Near any thunderstorms – *Strong outflow winds possible with gusts of 35 to 45 mph!* Directions will be erratic but favoring SE to SW for the strongest gusts.

STABILITY: Weaker inversions due to increasing moisture and instability. Smoky valley inversions lifting by early afternoon. *Significant and rapid PyroCumulus development is likely if a strong column forms.*

CHANCE OF THUNDERSTORMS: 60%

SMOKE TRANSPORT WIND: NE-SE 5 mph to SW-W 10-15 mph

SUNDAY NIGHT:

WEATHER: Warm and dry with mid slope thermal belts and poor RH recoveries. *Isolated dry thunderstorms are possible especially through midnight. Rainfall less than a tenth of an inch, locally a quarter of an inch under cores.*

MINIMUM TEMPERATURE: Upper 60s to low 70s along slopes & ridges and mid to upper 60s in valleys.

MAXIMUM RELATIVE HUMIDITY: Around 28-35% slopes & ridges and 45-55% valleys.

20 FOOT WINDS: W to NW 10-15 mph diminishing around 2100 then becoming N-NE 4-7 mph along ridges with downslope/down-valley 2-4 mph elsewhere. **Gusty outflow winds remaining possible near thunderstorms!**

STABILITY: Smoke settling into the area valleys including Scott Valley.

CHANCE OF THUNDERSTORMS: 30%

SMOKE TRANSPORT WIND: SW-W 10 mph to light NE-SE.

MONDAY: * FIRE WEATHER WATCH IN EFFECT 2AM - 9PM ***** Another round or two of isolated dry thunderstorms possible, but less confidence than Sunday. Remaining hot, highs ranging from upper 80s along ridges to near 100 in valleys. Min RHs 15-20% with poor to fair overnight recoveries around 28-38% along slopes and ridges, and 47-57% in valleys. Terrain driven up-slope and up-canyon winds continue with NW down-canyon winds of 10-15 mph gusting to 20 mph late afternoon into the evening.

OUTLOOK FOR TUESDAY AND WEDNESDAY: The risk for thunderstorms will diminish. Troughing to the northwest and ridging to the east will bring onshore pressure gradients with breezy SW to NW afternoon & evening winds along ridges and through channeled terrain. There is concern for enhanced breeziness on Tuesday. Temperatures will be a couple degrees cooler, with some slight moderation of RH. Min RHs will be in the 18-28% range and overnight recoveries will remain poor to at best fair along slopes and ridges.

Please email weather observations to julia.ruthford@usda.gov or text them to 530-440-4898. Thanks!

FIRE BEHAVIOR

- GENERAL:**
- Critical fire day with Red Flag Warning conditions for isolated to scattered dry thunderstorms (see Fire Wx Forecast). Potential for new lightning ignitions.
 - Very active fire or potential, similar to yesterday. Just like yesterday in the morning-- primarily diurnal; with transition in the afternoon to a SW to NW ridge-level influence until late evening.
 - Fuels are very dry and receptive. Concern is for torching, spotting, or slope-reversals that can lead to uphill runs, torching, more spotting or crown runs.
 - Watch out for when the smoke inversion breaks. If it does expect fire activity increase with potential for extreme fire behavior and spread to follow well into the evening. Until smoke inversion lifts or breaks, it will likely keep a lid on the fire, even though it will still be active.

SPECIFIC:

Branch X, DIVS A, B, C:
 Upper Kidder and Mill Creek will be active in the morning due to poor nighttime humidity recovery and favorable nighttime burning conditions. Backing, flanking, potential for active growth in the afternoon with increase in activity, such as individual/group torching and spotting.

Branch XX, DIVS D, E, F:
 Very active to extreme fire growth in the Patterson Creek drainage yesterday leads us into today's potential with the instability for column (potentially pyrocumulus development) in areas where alignment of fuels, slope and winds support active fire growth. East aspect and upslope diurnal winds and low fuel moistures will support early activity (if skies are clear). Smoke inversion may delay onset.

Branch XXX, DIVS G, M, T:
 Lowest fire perimeter in Right Hand Branch North Fork Salmon river, just west of Bear Wallow Peak, good potential for fire to spot across river and establish on westside of river.

AIR OPERATIONS: Inversion in the morning, air operations impacted by smoke.
 Sunrise: 5:50am, Sunset: 8:43pm, Daylength: 14 hours, 53 minutes, 07 seconds (-1:23min)

SAFETY: Plume or thunderstorms overhead can collapse unexpectedly or have downdraft flows that create gusty and erratic winds and rapid rates of spread in any direction. Outflow winds can travel long distances following terrain.

Shelly – Safety Message

INCIDENT: # CA-KNF-005159

Date Prepared: 7/13/2024

For Day/Night Operations: 7/14/2024

Keep Your Guard Up!

Escape Route(s)

- More than one escape route
- Avoid steep, uphill escape routes
- Scouted for loose soils, rocks, vegetation
- Timed considering slowest person, fatigue, and temperature factors
- Marked for day or night
- Evaluate escape time vs. rate of spread
- Vehicles parked for escape

Safety Zone(s)

- Survivable without a fire shelter
 - Back into clean burn
 - Natural features (rock areas, water, meadows)
 - Constructed sites (clear-cuts, roads, helispots)
 - Scouted for size and hazards
 - **Upslope? Downwind? Heavy fuels? Each means more heat impact meaning larger safety zone.**
- Time available to use escape routes will decrease and safety zone size will increase (possibly by more than double) as wind exceeds 10 mph and/or slope exceeds 20%!**

Working with Heavy Equipment

- When working around heavy equipment, stay at least 100 feet in front and 50 feet behind the equipment. In timber, distances should be increased to 2½ times the canopy height.
- No one but the operator should ride on the equipment.
- Never approach equipment until you have eye contact with the operator, all implements have been lowered to the ground, and equipment is idled down.
- Avoid working downhill from equipment where rolling material could jeopardize your safety.
- Night work is more dangerous due to reduced visibility. Use headlamp and/or glow sticks so the operator can see you.
- Establish visual and radio communication methods prior to engaging.
- Communicate all hazards to the operator (spot fires, firing operations, and obstacles).
- Equipment operators have difficulty seeing ground personnel; take responsibility for your safety and all those around you.

Watch for this in DIVISION C and Contingency East

Change In Weather / Higher Winds

- **Situational Awareness:** Be alert for gusty winds and how that affects your work area.
- **Identify hazard trees and rock fall potential** to all personnel.
- **Work with extreme caution in the area:** Wear and use all approved PPE properly. Use the Risk Management Process (IRPG p. 1) to engage.
- **Be alert for hidden hazards:** Work area can rapidly change with increasing winds.
- **Beat the Odds:** Communicate changing conditions throughout the division/group.

Watch for these changes in wind and fire behavior in the Scott Valley late in the day.

Team 12 Safety Group

HELICOPTER EXTRACTION OPERATIONS

The intent of helicopter insertion/extraction operations is to facilitate the movement of personnel to and from inaccessible areas. These operations are not meant to be a medical transport resource; life flight and ground transportation should always be ordered in addition to the extraction aircraft and crew.

ORDERING:

- On-scene EMT and/or Incident within Incident IC determines that an extraction helicopter is needed and places the order through the pre-established procedures:
 - Division Supervisor
 - Incident Communications
 - Dispatch Center
- When ordering extraction aircraft provide the following information:
 - Location (Lat/Long) of patient
 - Known Hazards
 - Wind Speed and Direction
 - Terrain
 - Incident Updates

SITE SELECTION:

- The helicopter crew will confirm the extraction location when they arrive on scene. However, a general rule is any clearing that is 10'x10' with visible sight lines to the sky is a suitable extraction site.
- If the terrain is steep, excavating a platform or shelf can make it easier for patient packaging.

QR Code-Short-haul Site Selection Video

CONSIDERATIONS:

- Short-haul and hoist are safe and efficient operations for extracting injured personnel of any severity including "Green" patients.
- Ensure area is clear of non-essential items, hazards, and personnel.
- Rotor wash may affect overhead hazards and blowing dust/debris can create brown out conditions or influence fire behavior.
- Aerial Supervision is valuable for coordinating aviation medevac/extraction missions and should be ordered if available and not currently present.
- The aircrew will make the final assessment of the mission. Always have a contingency plan in case a helicopter cannot complete the request.

DEFINITIONS:

Rescue Hoist: A cable winching device mounted to the helicopter that can lower/raise persons attached to a cable.

- Common cable lengths are 250-300 feet.

Short-haul: To insert or extract one or more persons suspended on a fixed line beneath a helicopter.

- Common short-haul line lengths are 100, 150, and 250 feet. The lines can also be connected for a longer line if the situation requires it.
