SIGNED: Julia E. Ruthford | Jonathan O'Brien

FORECAST ISSUED: 1900 Monday 7/15/24

Julia Ruthford IMET - (530) 440-4898

Jonathan O'Brien IMET (t) - (951) 533-8462

WEATHER DISCUSSION: An upper level trough swinging inland across the area this afternoon and evening will bring a strong push of southerly winds which will quickly scour out the lingering low & mid-level moisture left over from the last two days of thunderstorm activity. RHs will drop quickly through the day as a result with afternoon min RHs in the lower teens combined with gusty afternoon and evening S-SE winds. Stronger ridge level and transport winds will additionally mix valley inversions out by mid to late morning with active ventilation across the fire area through the afternoon.

TUESDAY:

WEATHER: Mostly Sunny. Windy and drier.

MAXIMUM TEMPERATURE: Highs ranging from around 80 along ridges to the lower 90s valleys.

MINIMUM RELATIVE HUMIDITY: 11-14% in valleys and 15-18% along ridges.

20 FOOT WINDS:

SW of the PCT – Up-slope winds of 3-5 mph developing mid to late morning will become SW up-canyon winds 10-15 mph early afternoon with gusts of 20-25 mph mid to late afternoon and S-SE winds increasing to 30-40 mph along the highest ridges.

NE of the PCT – S-SE winds of 15-20 mph along ridges will increase to 20-30 mph in the afternoon with gusts up to 40 mph along higher ridges. Along slopes and valleys, up-slope winds of 2-4 mph becoming SE to NE up-canyon 8-11 mph early afternoon then reversing to SW down-canyon winds of 15-20 mph around 1400.

Scott Valley – Light winds early becoming S-SE 5-7 mph mid-morning, 10-15 mph early afternoon and 20-30 mph late afternoon into the evening.

STABILITY: Smoky valley inversions mixing out mid to late morning then unstable in the afternoon.

CHANCE OF THUNDERSTORMS: 5%

SMOKE TRANSPORT WIND: S-SE 30-40 mph

TUESDAY NIGHT:

WEATHER: Drying continuing especially along mid slope and ridge thermal belts.

MINIMUM TEMPERATURE: Mid 60s along slopes & ridges and mid 50s in valleys.

MAXIMUM RELATIVE HUMIDITY: Around 25% slopes & ridges and 40-45% valleys.

20 FOOT WINDS: S-SE wind of 20-30 mph along the ridges diminishing to 10-15 mph overnight with winds becoming down-slope/down-valley 2-4 mph elsewhere.

STABILITY: Smoke settling into valley inversions.

CHANCE OF THUNDERSTORMS: 0%

SMOKE TRANSPORT WIND: S-SE 20-30 mph

OUTLOOK FOR WEDNESDAY THROUGH SUNDAY: Troughing to the northwest and ridging to the east will bring onshore pressure gradients with breezy SW to NW afternoon & evening winds of 14-18 mph with localized gusts around 25 mph along ridges and through channeled terrain areas.

Temperatures will remain warm with highs in the mid 80s ridges to mid 90s valleys Wed & Thu and warming an additional 5-7 degrees Friday through Sunday. RHs will stay fairly dry with Min RHs in the teens and overnight recoveries 25-35% along slopes and ridges.

Please email weather observations to julia.ruthford@usda.gov or text them to 530-440-4898. Thanks!

FIRE BEHAVIOR

GENERAL:

- Areas that received precipitation yesterday (7/15) will be subdued in the morning hours and take time to increase in activity. However, with afternoon heating and strong southerly winds, 1 and 10 hour fuels will dry quickly and become available for consumption in the afternoon. Southerly slopes and exposed ridges will increase activity earlier in the burn period.
- Increasing southerly winds particularly over ridges and aligned drainages will impact the fire with potential for torching, spotting, and uphill runs, especially on the western portion of the fire that received little to no precipitation yesterday.
- Indices are still above the 97th percentile and despite two days of moderated fire behavior, conditions today will favor more active fire behavior on upper slopes and wind-aligned drainages.

SPECIFIC:

Branch X, DIVS A, B, C:
 Upper/westerly portions of Kidder Cr./Mill Cr. will increase in activity relative to previous days in the timbered fuels where continuity provides for favorable nighttime burning conditions. Backing, flanking, and potential for spotting (0.5 mile) and active growth in the afternoon under strong southerly winds.

Branch XX, DIVS D, E, F:
 Areas that received precipitation will be subdued in morning hours, however active portions of upper Patterson Creek will continue to consume heavy's and activity may pick up in the afternoon with clearing and southerly winds, though winds should generally push the fire downslope into the burn.

Branch XXX, DIVS G, M, T:
 Lowest fire perimeter in Right Hand North Fork Salmon River, just west of Bear Wallow Peak, may have wind funneling with southerly winds, potential for fire to spot across river or move up-canyon later in the afternoon.

AIR OPERATIONS: Inversion in the morning, air operations may be impacted by higher windspeeds aloft near ridgetops for rotor wing operations.
 Sunrise: 5:52am, Sunset: 8:42pm, Daylength: 14 hours, 50 minutes, 12 seconds (-1:28min)

SAFETY: The fact that fire behavior has moderated doesn't mean the hazards are reduced. Many fire weakened trees exist in the fire perimeter. Be aware and ensure work areas are assessed for overhead hazards prior to engaging.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

We are **ALL** accountable for **SAFE** behaviors
For Day/Night Operations: **July 16, 2024**

Firefighter Wellness

We must take care of ourselves if we are going to help others. Proper rest, hydration, nutrition, fatigue management, and limiting smoke exposure are critical to our long-term wellbeing. Remember work life balance, don't forget to call home and touch base with family.

<p><u>Wildland Urban Interface Firefighting</u></p> <ul style="list-style-type: none"> • Fire Behavior Prediction - base all actions on current and expected fire behavior. Do this first! • Structure Size up - is there adequate defensible space and a safety zone based on the fire behavior prediction? • Structure Triage - is the structure defensible or non-defensible? • Tactical Challenges and Hazards – Narrow roads, fuel tanks, hazardous materials, powerlines, hazard trees, and limited water supply. • Prevailing Sense of urgency for structure defense. • Do not commit to stay and protect a structure unless a safety zone for firefighters and equipment has been identified at the structure during size up and triage. 	<p><u>Shelly Fire Incident Specific Safety:</u></p> <ul style="list-style-type: none"> • Operational Tempo - matching the pace of operations to match the conditions. There is a time to push and times to take a tactical pause & re-evaluate. • Fatigue - this is a tough fire, on tough ground, and we have been here for an extended period. Monitor yourself and others. • Work/Rest Ratio - maintain a manageable and sustainable work to rest ratio. • Rest/Hydration/Nutrition - take breaks, hydrate, and eat appropriately as needed & when you can. • Work Life Balance - taking the time to touch base with family can provide mental and emotional support which can help reduce stress.

HELICOPTER EXTRACTION OPERATIONS

The intent of helicopter insertion/extraction operations is to facilitate the movement of personnel to and from inaccessible areas. These operations are not meant to be a medical transport resource; life flight and ground transportation should always be ordered in addition to the extraction aircraft and crew.

ORDERING:

- On-scene EMT and/or Incident within Incident IC determines that an extraction helicopter is needed and places the order through the pre-established procedures:
 - Division Supervisor
 - Incident Communications
 - Dispatch Center
- When ordering extraction aircraft provide the following information:
 - Location (Lat/Long) of patient
 - Known Hazards
 - Wind Speed and Direction
 - Terrain
 - Incident Updates

SITE SELECTION:

- The helicopter crew will confirm the extraction location when they arrive on scene. However, a general rule is any clearing that is 10'x10' with visible sight lines to the sky is a suitable extraction site.
- If the terrain is steep, excavating a platform or shelf can make it easier for patient packaging.

QR Code-Short-haul Site Selection Video

CONSIDERATIONS:

- Short-haul and hoist are safe and efficient operations for extracting injured personnel of any severity including "Green" patients.
- Ensure area is clear of non-essential items, hazards, and personnel.
- Rotor wash may affect overhead hazards and blowing dust/debris can create brown out conditions or influence fire behavior.
- Aerial Supervision is valuable for coordinating aviation medevac/extraction missions and should be ordered if available and not currently present.
- The aircrew will make the final assessment of the mission. Always have a contingency plan in case a helicopter cannot complete the request.

DEFINITIONS:

Rescue Hoist: A cable winching device mounted to the helicopter that can lower/raise persons attached to a cable.

- Common cable lengths are 250-300 feet.

Short-haul: To insert or extract one or more persons suspended on a fixed line beneath a helicopter.

- Common short-haul line lengths are 100, 150, and 250 feet. The lines can also be connected for a longer line if the situation requires it.
