3. Objective(s):

Leaders Intent

- Implement a full suppression strategy on the Shelly Fire. The identified values at risk include human safety, private timberlands, communities, cultural resources, and wilderness areas. Apply tactics that offer the highest probability of success.
- All incident assigned personnel should be prepared to take appropriate actions regarding:
 - Personal safety and the safety of others, including driving slowly and defensively.
 - Professional behavior, conduct, and timely / effective communication.
 - Manage fatigue by taking breaks and maintaining work / rest cycles.
 - Provide the highest level of customer service to all involved with or impacted by the Shelly Fire.

Management Objectives

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Coordinate all public information to provide timely and continuous information to affected agency partners, cooperators, and to the public.
- Coordinate suppression activities with assigned incident resource advisors to minimize impacts on natural and cultural resources.
- Maintain relationships with partner agencies, elected officials, organizations, tribes, neighboring landowners, and community groups and members.

Control Objectives

- To limit fire growth and to prevent the fire from spreading to private property, surrounding communities and values at risk, and keep the Shelly Fire:
 - North of Etna Summit
 - South of Old English Road
 - East of Bear Wallow Peak
 - West of Highway 3

FIRE WEATHER FORECAST

FORECAST NO. 12

NAME OF INCIDENT: Shelly

PREDICTION FOR: Wednesday July 17, 2024

UNIT: Klamath National Forest

TIME AND DATE

SIGNED: Jonathan O'Brien/Julia E. Ruthford

FORECAST ISSUED: 1900 Tuesday 7/16/24

Jonathan O'Brien IMET (t) - (951) 533-8462

Julia Ruthford IMET - (530) 440-4898

WEATHER DISCUSSION: A departing upper level trough combined with a developing ridge will bring a warm and dry day. Mid-level moisture has been scoured out of the region, and the risk for thunderstorms has diminished. RHs will drop through the day with afternoon min RHs in the teens to near 20%. Onshore pressure gradients will bring breezy SW-NW ridge level and down-canyon winds this afternoon & evening. Valley inversions will likely be slower to lift than recent days but should break by early to mid afternoon. Thermal belts will develop tonight with mid-slope to ridgeline RH recoveries of 30-35%.

WEDNESDAY:

WEATHER: Sunny. Warm and dry.

MAXIMUM TEMPERATURE: Highs ranging from low 80s along ridges to the low to mid 90s valleys.

MINIMUM RELATIVE HUMIDITY: 12-17% in valleys and 18-23% along ridges.

20 FOOT WINDS:

SW of the PCT – Up-slope winds of 3-5 mph developing late morning will become SW-W up-canyon 8-14 mph early afternoon with gusts of 16-20 mph possible mid to late afternoon.

NE of the PCT – Up-slope winds of 2-4 mph becoming SE to NE up-canyon 4-7 mph early afternoon then reversing to SW to NW around 1300 and increasing to 12-16 mph with gusts to 20-25 mph late afternoon through evening along ridges and down-canyon winds of 5-7 mph drainage bottoms.

Scott Valley – E-SE winds 3-5 mph in the morning becoming S-SW 5-7 mph around 1200 then SW-W 10-15 mph with gusts 18-20 mph mid-afternoon and into the evening.

STABILITY: Smoky valley inversions mixing out early to mid afternoon, then unstable late afternoon.

CHANCE OF THUNDERSTORMS: 0%

SMOKE TRANSPORT WIND: S-SW 8-14 mph

WEDNESDAY NIGHT:

WEATHER: Mild and dry with thermal belts along mid-slopes and ridges.

MINIMUM TEMPERATURE: Mid 60s along slopes & ridges and upper 50s to near 60 in valleys.

MAXIMUM RELATIVE HUMIDITY: Around 30-35% slopes & ridges and 45-55% valleys.

20 FOOT WINDS: W to NW 10-15 mph diminishing around 2100 then becoming N-NE 6-9 mph along ridges with downslope/down-valley 2-4 mph elsewhere.

STABILITY: Smoke settling into valley inversions.

CHANCE OF THUNDERSTORMS: 0%

SMOKE TRANSPORT WIND: SW 6-10 mph then light NE-E

OUTLOOK FOR THURSDAY THROUGH MONDAY: A strong ridge of high pressure will build across the region with occasional troughing present to the northwest. This will bring onshore pressure gradients with breezy SW to NW afternoon & evening winds of 14-18 mph with localized gusts around 25 mph along ridges and through channeled terrain areas each day. Temperatures will remain warm and trend upwards, with highs reaching the upper 80s to low 90s on the mid-slopes and over 100 in the valleys by Fri. RHs will stay fairly dry with Min RHs 15-25% and overnight recoveries 30-40% along slopes and ridges. Isolated thunderstorm activity is possible on Saturday.

Please email weather observations to julia.ruthford@usda.gov or text them to 530-440-4898. Thanks!

FIRE BEHAVIOR

GENERAL:

- Areas that received precipitation July 15 will remain subdued in the morning hours in sheltered locations but increase in activity in the afternoon. Fuels on southerly slopes and exposed ridges will become available earlier. Surface fire spread will resume where fire has access to unburned fuels, otherwise smoldering and creeping will continue in heavy fuels.
- Expect mostly smoldering and creeping within containment lines except in areas with slope/wind alignment that could see isolated torching later in the afternoon burn period.
- While fire behavior will be moderated within containment lines, if spotting occurs outside of the current perimeter, expect increased fire behavior that may include group torching and short crown runs, especially on steep slopes exposed to southwest afternoon winds.
- With Probability of Ign. at 90%, maintain situational awareness for sparks for all equipment conducting repair.

SPECIFIC:

Branch X, DIVS A, B, C:
 Upper/westerly portions of Kidder Cr./Mill Cr: Expect backing, flanking, and smoldering with potential for rollout on steep slopes. Generally fire is out of wind/slope alignment but if spotting occurs, the fire environment will be conducive to active fire spread. Areas within containment lines will continue to smolder and burn down.

Branch XX, DIVS D, E, F:
 Active portions of upper Patterson Creek will continue to consume heavy's and surface fire spread will increase in the afternoon with clearing of the inversion and further drying of surface fuels. Keep in mind the diurnal wind pattern with upslope/northeasterly winds in morning hours then transition to southwesterly winds in the afternoon. Areas within containment lines will continue to burn down and smolder.

Branch XXX, DIVS G, M, T:
 Lowest fire perimeter in Right Hand North Fork Salmon River, just west of Bear Wallow Peak, may still have potential for fire to cross river to the west; otherwise continued smoldering is expected.

AIR OPERATIONS: Inversion in the morning clearing by early afternoon, less smoke production may allow for increased visibility.
 Sunrise: 5:51am, Sunset: 8:43 pm, Daylength: 14 hours, 51 minutes

SAFETY: Smoldering fire behavior continues to weaken trees within the fire perimeter, keep situational awareness at the forefront for all activities and assess worksites prior to engagement.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

We are **ALL** accountable for **SAFE** behaviors
For Day/Night Operations: **July 17, 2024**

Normalization of Deviance (New normal replaces old normal)

- **Complacency** – Defined as a feeling of contentment or self-satisfaction, especially when coupled with an unawareness of danger, trouble, or controversy.
- **Normalization of Deviance** - When we are operating under conditions of stress and consequence, coupled with changing conditions and time compression, we can feel a sense of urgency and this can cause us to want to take a shortcut from safety best practices.
- **Mitigations to combat complacency and Normalization of Deviance:**
 1. Discuss areas of vulnerability in your division where it appears as though you may be drifting toward failure.
 2. Discuss a close call or near-miss event where, in hindsight, it appears a contributing factor was a shortcut that members have been taking multiple times over a long period of time.

Risk Management Process:

Step 1: Situation Awareness

- Gather Information
- Communication
- Who's in charge?
- Scout the fire

Step 2: Hazard Assessment

- Estimate potential fire behavior hazards
- Identify tactical hazards
- As conditions change, what other hazards may develop?

Step 3: Hazard Control

- Establish anchor point
- LCES – MANDATORY

Step 4: Decision Point

- Are controls in place for identified hazards?
- Are selected tactics based on expected fire behavior?
- Have instructions been given and understood?

Step 5: Evaluate

- Self: fatigue, attitude, experience, distracted?
- The situation: what is changing?
- Are strategy and tactics working?

Before burnout OPS assure that:

- A thorough briefing should be conducted prior to firing operations.
- Lookouts are posted.
- Communications are established between firing and holding teams and notify
- Escape routes are established and will not be compromised by firing.
- Firing does not out pace holders.
- Critical points such as bends in the fireline and saddles may require extra holding forces.
- Review current and expected fire behavior.
- In Divisions **A, B and E** be prepared for your specific burnout ops.
- Have your plan reviewed early by your line safety.

HELICOPTER EXTRACTION OPERATIONS

The intent of helicopter insertion/extraction operations is to facilitate the movement of personnel to and from inaccessible areas. These operations are not meant to be a medical transport resource; life flight and ground transportation should always be ordered in addition to the extraction aircraft and crew.

ORDERING:

- On-scene EMT and/or Incident within Incident IC determines that an extraction helicopter is needed and places the order through the pre-established procedures:
 - Division Supervisor
 - Incident Communications
 - Dispatch Center
- When ordering extraction aircraft provide the following information:
 - Location (Lat/Long) of patient
 - Known Hazards
 - Wind Speed and Direction
 - Terrain
 - Incident Updates

SITE SELECTION:

- The helicopter crew will confirm the extraction location when they arrive on scene. However, a general rule is any clearing that is 10'x10' with visible sight lines to the sky is a suitable extraction site.
- If the terrain is steep, excavating a platform or shelf can make it easier for patient packaging.

QR Code-Short-haul Site Selection Video

CONSIDERATIONS:

- Short-haul and hoist are safe and efficient operations for extracting injured personnel of any severity including "Green" patients.
- Ensure area is clear of non-essential items, hazards, and personnel.
- Rotor wash may affect overhead hazards and blowing dust/debris can create brown out conditions or influence fire behavior.
- Aerial Supervision is valuable for coordinating aviation medevac/extraction missions and should be ordered if available and not currently present.
- The aircrew will make the final assessment of the mission. Always have a contingency plan in case a helicopter cannot complete the request.

DEFINITIONS:

Rescue Hoist: A cable winching device mounted to the helicopter that can lower/raise persons attached to a cable.

- Common cable lengths are 250-300 feet.

Short-haul: To insert or extract one or more persons suspended on a fixed line beneath a helicopter.

- Common short-haul line lengths are 100, 150, and 250 feet. The lines can also be connected for a longer line if the situation requires it.
