WEATHER SUMMARY: ****Excessive Heat Warning through 23:00 Tuesday 7/9/24****
Sky/ Weather...Very hot and dry conditions will continue across the region through the weekend. Highest temperatures will come Friday and Saturday with expected high temperatures of 113. Single digit daytime relative humidity will be possible, followed by minimal overnight humidity recovery. Wind speeds will slow and become more diurnal.

DAY Max Temp...112° **Min Humidity...**14%
Wind (20ft) NE 3-6 mph gusts to 10 mph...shifting @ 10:00 SW 5-10 mpg with gusts to 15mph
RIDGETOP: NE 5-10 mph gusts to 15 mph...shifting @ 10:00 WNW 5-10 mph with gusts to 15 mph

NIGHT Min Temp...76° **Max Humidity...**35%
Wind (20ft) NE 3-6 mph gust to 10 mph
RIDGETOP: NE 4-8 mph gusts to 10mph

****Review the weather forecast for more details****

OUTPUTS

GENERAL:

Light flashy fuels are completely cured. The Energy Release Component is currently at the 97th percentile and will continue to climb through historic levels this week. Fuel moisture levels in the brush are averaging 85%. Fires in the area will exhibit critical rates of spread when in alignment with any wind and topography. Large stands of fire weakened Gray Pines and Oaks are found throughout the fire and will continue to retain heat under the current weather conditions. Fire weakened trees will be able to produce ember cast as well as release hot rolling material down the steep slopes.

FUEL MODEL	RATE OF SPREAD FT/MIN	FLAME LENGTH FT	SPOTTING DISTANCE	PROBABILITY OF IGNITION
Grass	267	16	.5 mi	100%
Grass/Shrub	60	8	.3 mi	100%
Timber Understory	24	12	.4 mi	100%

SPECIFIC: The probability of a new ignition is extremely high due to the dense amount of cured fine flashy fuels and current weather conditions. The abundant fine fuels underneath the trees will have the ability to contribute to single and group tree torching events. Deep seated heat will be found in all areas of the fire and standing timber requiring large amounts of mop up.

Review the included **Fuels and Fire Behavior Advisory** for additional information about the above average dense cured grass crop and continuous fuel loaded found throughout the state this year.

AIR OPERATIONS: Sunset: 20:36 Sunrise: 05:45
 Light winds will cause smoke to linger in the area. Drainage bottoms could have smoke pooling which will clear before 10:00. Mixing height 6,000' AGL in the afternoon.

SAFETY

*****WEATHER GETTING HOTTER AND DRYER*****

The cured grasses are a VERY receptive fuel bed, only requiring a minimal heat source to ignite. Do not be the ignition. Park all vehicles and equipment in areas devoid of any grasses. Fire weakened timber will produce heat sources that can threaten your control lines.

Fuels and Fire Behavior Advisory

California Grass and Herbaceous-Dominated Ecosystems

June 24, 2024

Subject: Herbaceous fuel loadings are above to well above average across most of California's grass-dominated systems, including typically arid deserts and valleys that often do not support fire growth.

Discussion: Precipitation and temperature alignments throughout the winter and spring of 2024 have resulted in an above average load of herbaceous fuels across many grass-dominated systems throughout California. The above normal grass and herbaceous load creates a continuous fuel bed, allowing for rapid spread of fires when these fuels are cured. The continuous nature of the herbaceous fuel bed is enhanced by remnant thatch resulting from herbaceous growth during the abnormally wet late summer and fall of 2023 and multiple consecutive years of above average herbaceous growth.

Difference from normal conditions:

Herbaceous fuel loading in the Sacramento Valley and foothills is near 120% of normal, with reports of loading exceeding normal by a higher level across South Ops and the NE portion of the state. Below 3,000ft these fuels are nearly to fully cured. Curing and drying is increasing at upper elevations as the state enters a period of rapid heating with widespread single digit RH in the areas of concern.

Concerns to Firefighters and the Public:

- Continuous fuel loading lowers the wind threshold need to initiate rapid spread of fires during initial attack. Under what are typically low to moderate wind speeds, rates of spread and flame lengths are likely to exceed direct attack capabilities without significant support from aircraft.
- Areas that typically resist fire spread, such as grazed areas, may not slow fire growth or reduce fire behavior as expected.
- Continuous fuels in arid and semi-arid ecosystem in deserts and high valleys are likely to support continuous fire spread in areas typically considered non-burnable.
- Heavy and continuous cured herbaceous fuels may serve as a catalyst for fire spread into brush fuel types, even at fuel moisture levels that would otherwise make them resistant to rapid fire spread.

Mitigation Measures:

- Brief all incoming resources about these conditions, especially out-of-area resources unfamiliar with local conditions.
- Consider augmentation of aircraft response for initial attack is in areas of heavy herbaceous fuels.
- Fire behavior prediction simulations using fuel models GR1 and GR2 are likely to underpredict spread; modification to GR4 or GR7 may be needed to accurately model fire spread in herbaceous fuels.
- Modify tactics to account for increased fire line intensity and spotting.

Area of Concern:

Across Central and Southern California, areas of concern focus on foothills, grasslands and deserts at or below 3,000 ft. in elevation. This includes portions of the following predictive services areas: NC02, NC03A, NC03B, NC04, NC05, NC07, and all South Ops PSA's.

Across the northeast portion of the state this includes hills, valleys, and deserts near and below 5,500 ft in elevation in parts of predictive services areas NC06 and NC08.

Issued By: Predictive Services Units from Northern California and Southern California, in coordination with Cal Fire and Cal OES Fire and Rescue Division.

MEDIA

California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot, or civil disturbance. Correctly identified news media members should not be restricted from entering locations specified within the code. However, this does not include crime scenes or private property and does not imply that the news media may interfere with incident operations while in the areas of concern. More information can be found by following the QR code.

CAL FIRE SOCIAL MEDIA POLICY

When assigned to a CAL FIRE incident, all personnel shall adhere to the CAL FIRE social media policy, Section 0691. Following the QR code, for further information about the CAL FIRE social media policy.

PHOTOGRAPHS AND VIDEOS OF THE INCIDENT

The Public Information Office would like copies of the video and pictures that were safely took while not in an emergency, fire suppression activity, or overhead assignment. Bring video and pictures to the Public Information trailer; photos will be reviewed and possibly uploaded to our many CAL FIRE social media sites. As a reminder the Public Information Office does not want photographs or videos that depict unsafe, unprofessional, or embarrassing circumstances, which are a severe breach of ethics.

CURRENT INCIDENT UPDATE:

Scan the QR code to the right to view the most up-to-date incident status.

LOST AND FOUND

The Information Section will manage lost and found items for the incident at the PIO Trailer.
