## **TRAFFIC AND ROADS**

### **INCREASED USE OF ROADS CAUSES INCREASED HAZARD**

#### **WATCH OUT FOR MULTIPLE HAZARD DRIVING SITUATIONS**

- Dust and smoke conditions can compromise visibility

- Rocks snags and small dry slides have been reported by previous shifts

#### **Mitigation** – Drive with a high levels of Situational Awareness and defensive driving techniques

- **SLOW DOWN!** Drive slow expecting oncoming traffic, hazards and poor visibility
- Be careful of soft shoulder when pulling over to road edge for oncoming vehicles
- Watch for increased road hazards such as rocks, slides and snags

## **GENERAL HEALTH**

### **EXHAUSTION MAY COMPROMISE SAFETY!**

#### **BE ON THE LOOKOUT FOR SIGNS OF EXHAUSTION AND LOOKOUT FOR ONE ANOTHER**

- Diet can cause chronic feelings of exhaustion
- Arduous work can consume body fluids, electrolytes at higher rates
- Steep terrain and hot dry conditions increases the risk of fatigue and exhaustion

#### **Mitigation** – Proper nutrition reduces fatigue and exhaustion emergencies

- Eat foods which provide steady energy • limit sugary, fatty, fried and processed foods
- Hydrate-proper hydration prevents fatigue • Manage work rest ratio while performing work
- Early fire season – we are not acclimated. Manage your work rate

## **ROCKS AND BOULDERS**

**\*\*\*ISOLATED THUNDERSTORMS WITH OUTFLOW WIND GUSTS OF 30 MPH OR MORE\*\*\***

**WEATHER DISCUSSION:** Low pressure has moved off the coast and will bring a southerly flow to the fire. It will also bring moisture and instability which will trigger isolated thunderstorms in the afternoon. The thunderstorms may initially begin dry but transition to wet. The main threats will be cloud-to-ground strikes outside the storm cores and gusty outflow winds from the south which could reach or exceed 30 mph at eye level.

**WEATHER FORECAST (TODAY):**

**WEATHER:** Partly cloudy with isolated wet/dry thunderstorms after 1400.

**LAL:** 2

**TEMPERATURES:** MAX: 67-73.

*24hr Trend: 2-4 degrees cooler*

**HUMIDITY:** 20-24%

*24hr Trend: 4-6% wetter*

**EYE LEVEL WINDS:**

**RIDGES** – South to southeast 3-6 mph with gusts to 12 mph.

**SLOPES/CANYONS** - Upslope 2-4 mph, local gusts to 8 mph from the southeast upper half south aspects.

**STABILITY:** Weak inversion breaking around 1200, then unstable. Mixing height 9,000 feet AGL.

**VISIBILITY:** 10 miles or more.

**FORECAST (TONIGHT):**

**WEATHER:** Mostly cloudy with isolated thunderstorms until 2200.

**LAL:** 2

**TEMPERATURES:** MIN: 45-50.

**HUMIDITY:** MAX: 65-75%.

**EYE LEVEL WINDS:** Southeast 2-4 mph becoming downslope after 2200.

**STABILITY/INVERSION:** Unstable early becoming stable with weak inversion after 2000 at 500 ft AGL.

**OUTLOOK FOR MONDAY:** Mostly cloudy. Scattered showers and isolated thunderstorms. Temperatures: MAX 58-63, MIN 41-46. Relative Humidity: MIN 42-48%, MAX 75-90%. WINDS: South to southwest 2-5 mph with gusts to 8 mph. Rainfall amounts less than 0.10 inches.

**OBSERVATIONS SATURDAY:**

Cal Fire Portable (6 mi SSW – 4157 ft): Temp: MAX: 72. RH: MIN: 17%. Winds (eye): E 8 G 19 mph.

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER 3	TYPE OF FIRE Surface
FIRE NAME Panther	OPERATIONAL PERIOD 5-5-2013 24 hour shift
DATE ISSUED 5-4-2013	TIME ISSUED 1900 HOURS
UNIT CALFIRE BTU	SIGNED  Tim Chavez

## INPUTS

**WEATHER SUMMARY** Low humidity and potential for dry thunderstorms present a potential for large fire growth and increased spotting. Downdrafts and outflows in the fire area can affect your fire behavior. **PLEASE REVIEW INCIDENT WEATHER FORECAST**

## OUTPUTS

### FIRE BEHAVIOR DAY

Probability of Ignition from firebrand = 82%.  
 Probability of Ignition from lightning=39%.  
 Fine Dead Fuel Moisture = 3-4  
 Flame Lengths 7-8 ft  
 Rate of Spread 12 ch/h  
 Spotting Distance .3 miles

### FIRE BEHAVIOR NIGHT

Probability of Ignition from firebrand = 73%.  
 Probability of Ignition from lightning=39%.  
 Fine Dead Fuel Moisture = 4-5  
 Flame Lengths 6.1  
 Rate of Spread 9 ch/h  
 Spotting Distance .2 miles

## GENERAL

With high winds and low RH expected to continue through the day with the possibility of spotting, large perimeter growth and crown runs may be present. The main carrier of the fire is the 10 and 100 hour dead fuel in the timber understory but transitioning into more of brush fuel model below 2500ft. Energy Release Components are at historic highs for this time of year and are mirroring peak fire season conditions. The unstable air mass that will be present in the fire area give the opportunity for **erratic fire behavior**. This can make control lines that were once quiet, active. Downdrafts, fire whirls, possibility of down hill fire runs and unpredictable wind conditions are also present in thunderstorm areas. The possibility of re-burn is present on all divisions of the fire due to the large amounts of scorched canopy. The out flow from thunderstorm activity will come from the south and can produce up to 30 mph winds that can drive fire into unburned fuel.

## SPECIFIC

### NORTHERN and EASTERN DIVISIONS

These divisions will see a moderate southeast wind combined with unstable air mass. These divisions had active burning through out the previous operational period. Division M, W and Z will be the most affected by the southern wind predicted for the day. Roll out of burning material and under slung may become extremely active under the correct conditions. This combined with potential for isolated dry thunderstorms create a prime environment for **extreme fire behavior**. Rates of spread and flame lengths can exceed the predicted forecast under these conditions.

### WESTERN and SOUTHERN DIVISIONS

The western and southern divisions will have been directly effected by wind the last operational period with little fire growth. In these divisions there is still the chance of large fire growth and roll out that will create challenges for suppression personnel. If the fire continues toward the west the fuel transitions from a timber into brush with more light flashy fuel as a receptive fuel bed. This combined with the unstable air mass will make for **very erratic fire behavior**. Rates of spread and flame lengths can exceed the predicted forecast under these conditions.

## AIR OPERATIONS:

High winds can affect the effectiveness of airdrops. Possible thunderstorm development over the fire area can create down drafts that can hamper air operations.

## SAFETY

- **Watch your wind conditions-** Unstable air combined with heavy fire activity can create a pyro cumulus
- **Have a escape route-** Changing wind can put you and your crew in a compromised position
- **Risk vs Gain-** In an operational period with extreme and erratic fire behavior is it worth it?

Incident Location

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed. Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

**Cultural Resource Guidelines for the Panther Fire  
CA-BTU-005648  
Tehama County, CA**

*Do not compromise safety for the protection and preservation of archaeological and historic properties. When possible and prudent:*

1. Be on the lookout for prehistoric archaeological sites. These sites may include seasonal camps marked by the presence of obsidian and/or basalt flakes and village sites that also include dark midden soils. The Native American group living in the area at time of historic contact was the Yana, the most famous of which was Ishi.
2. Be on the lookout for historic archaeological sites. These sites include a CCC era fire lookout, stacked rock foundations, and remnants of the Lassen Emigrant Trail which led gold seekers to California in 1849.
3. Look for prehistoric adjacent to streams and springs. Minimize dozer activity along water courses. The Lassen Trail is typically located in ridge top settings.
4. Known sites will be flagged for avoidance. If you can't avoid, minimize ground disturbance as much as possible, only clearing the surface to as minimal a depth as necessary. Try to go around sites with dozers rather than through them. Flag new sites.
5. If you find artifacts leave them in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
6. Note locations of any discovered artifacts, features, and/or sites on a map. Better yet take a GPS reading. Leave information for the archaeologist with the Plans Unit so that the sites can be relocated and protected during Fire Suppression Repair.
7. If you encounter human remains cease work in the area and contact the archaeologist immediately.

Thanks for your help protecting California's cultural heritage.
