OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire is being carried by annual grasses, litter and a 59+ age class California mixed chaparral with Oak/Mixed Conifer. Expect spread to be primarily fuels and topography driven with some terrain driven winds. Portions of fire area have no recorded fire history. FDFM is 3% for 1 hr and 4% for 10 hr fuels. Live Fuel Moistures are near 85% (Manzanita) with 80% being critical. Fire is carrying very well with wind and topography alignment. Head Fire ROS in excess of 40+ chains/hr. Spotting up to 1/4 mile.

Rapid rates of spread are found with an eye level wind of 8 mph or greater.

ERC: 81 (approaching 90th percentile)

Probability of Ignition: 90%.

SPECIFIC:

Branch I (Divisions A/B/S, U): Expect smoldering and backing fire to continue against afternoon winds. Interior island activity will present challenges with variable terrain driven winds.

Branch II (Division V): General wind sheltering from Phoenix Hill allows a series of drainages to move fire with terrain driven winds in all directions. Expect increased rates of spread up the various unnamed hilltops to the north of Phoenix Hill. Head fire runs that are in alignment with wind and slope may be in excess of 40 ch/hr. Hill top torching trees will provide a spotting source to 1/4 mile.

Branch II (Divisions W, X, Y): Anticipate flanking and smoldering activity. Interior "Jackpot" fuel piles consumed along with individual torching trees provide spotting source to 1/4 mile.

****Inversion lifting will see a significant increase in fire activity for all fire areas.****

****Possibility for plume dominated activity if fire moves into heavy fuel bed.****

AIR OPERATIONS:

Sunrise 0622 a.m. Sunset 1959 p.m.

0600-1100: weak inversion at 1500 ft msl. NE wind 10 mph above inversion.

1100-1700: mixing height to 11,000 ft msl. Transport wind Southwest 5-10 mph.

SAFETY

Keep alert to cumulus build up and possibility of gusty outflow winds.

Look for areas of topographic wind sheltering because slope will change the fire direction.

Know where you are in relation to head fire alignment.

Keep alert to hot ash pots and stump holes.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
