A slight chance of afternoon t-storms exists near the eastern edge of the fire. A mostly cloudy sky will likely moderate temperatures and RH. SW terrain-driven slope winds will dominate the fire today with NW steering winds pushing the smoke toward the SE.

TEMPERATURES:	70-78	Trend: Down 3 – 5%
RELATIVE HUMIDITY:	Zone 1: 45-60%	Trend: Up 5 – 10%
	Zone 2: 40-50%	Trend: Up 5 – 10%

INPUTS

WEATHER SUMMARY: POTENTIAL THUNDERSTORMS

Slight chance of afternoon thunderstorms over the eastern edge of the fire. SW terrain driven slope winds with NW steering winds pushing the smoke to the SE

Mostly Cloudy with moderate Temps and RHs – Max Temp 70 - 78 RH 40 to 50% LAL 2

20ft Wind –

Ridgetop Wind – morning NE 4 – 9 mph shifting westerly in the afternoon 3 – 7 with gusts to 12 MPH

Slope/Valley – wind will shift upslope / upcanyon 3 – 5 mph around 1000 hrs, increasing to 4 – 7 mph with gusts to 10 mph in aligned canyons. Inversions should break in the deep canyons by 1100 hrs

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The past two operational periods have seen low to moderate fire behavior due to increased cloud cover and higher RH values. The predominate fuel loads are high configurations of mature second growth conifer and heavy shrub groups. Fire behavior for Zone II was moderate, with heavier smoke production and limited active burning, isolated tree torching and slow rates of spread. Fuels are receptive and levels of burning and extension increased considerably when in optimal alignment. Extreme Fire Behavior was observed in earlier operational periods especially when timber was the primary carrier of fire.

Fire Behavior in Optimal Alignment

Fuel Type	ROS FWD	ROS LAT	FL (Ft)	P(i)G
Timber/Shrub	5 - 10 ft/min	1 - 2 ft/min	5 - 7	41%
Timber Litter	4 - 10 ft/min	1 - 2 ft/min	2 - 6	41%

High probability of increased fire behavior during any firing operations

SPECIFIC:

Predicted weather should allow for crews to engage in more direct operations. Steep terrain, partially or unburned fuels within the burn and less receptive flashy fuels add to complexity of any firing operations. Expect any spot fires from roll out or ember production from tree torching to have a high potential to make an upslope run.

Branch III – Fire should continue to creep back into the predicted wind. Steep canyons with heavy fuel loads will inhibit fire suppression operations.

Branch I – Steep terrain, post fire hazards and spot fires that might arise from any sleepers should be a priority concern.

Branch VII – Expect the fire to continue to burn and progress with the predicted West wind. Along with the complexity of terrain and jagged fire line, smoke could have an impact on visibility and air operations.

AIR OPERATIONS:

Morning inversion and possible residual afternoon smoke could inhibit air operations.

SAFETY

1. Keep informed on fire weather conditions and forecasts. 3. Base all actions on current and forecasted behavior of the fire. BE READY TO ADAPT TO UNEXPECTED CONDITIONS -- LCES

King Zone 2 Incident Safety Message

14-CAENF-023461

September 21, 2014

Driving

- ✓ Roadways are now open be aware of other drivers when working along roadways – They may not see you! Use warning devices and flaggers if necessary
- ✓ Seat Belts at all times
- ✓ Maintain safe speeds and following distances when in the communities and off road
- ✓ Ensure vehicle meets allowable height or weight requirements of roads, bridges and under crossings.

Fuels, Fire Behavior and Weather

- ✓ Fuel moistures are near or at record lows – Potential for rapid fire growth and erratic fire behavior is still present
- ✓ Potential for rapid fire growth exists – Know your LCES mitigations Communicate with crews and adjoining forces.
- ✓ **Hazard Trees** exist throughout the majority of the incident – Identify and Flag - Utilize qualified fallers – Work only within prescribed parameters! Refer to **IRPG pg. 22-23**
- ✓ Be aware for stump holes and root cavity ash pits – ground can collapse without warning. Sound the ground for stability when working in close proximity.
- ✓ Potential for Thunderstorms is in the forecast – Review **Thunderstorm Safety** on **Page 21 of the IRPG**

Hydration, Nutrition and Fatigue

- ✓ As personnel work more and more shifts on the line and the weather becomes warmer – Dehydration can accumulate and sneak up on you. Make sure you are staying hydrated. Minimum of ONE QUART per HOUR per person. Plan accordingly.
- ✓ Take frequent short breaks with small meals or snacks on regular intervals
- ✓ Monitor Personnel for Fatigue - Consider decreasing intervals for breaks or Increasing time – “This is a marathon; NOT a sprint!”

Footing and Rolling Material

- ✓ There is a significant amount of steep and unstable terrain – watch your footing and be aware of rolling material!
- ✓ Have an escape route and safety zone identified when personnel and equipment working above you!

PPE

- ✓ Wear all appropriate PPE – Replace damaged and worn equipment

Incident Location: Placerville, CA

County: El Dorado State: CA Latitude Longitude N W

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 100 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, IMT5 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
