INPUTS

WEATHER SUMMARY: RED FLAG WARNING FOR THUNDERSTORMS TODAY.

Moisture and instability will be over the fire area today into the evening hours. Expect thunderstorms to begin developing around noon and continue over night. Thunderstorms will be wet with the potential for moderate to heavy downpours. **Expect Lighting.**

OUTPUTS

FIRE BEHAVIOR:

Fire behavior has dropped off significantly with aggressive suppression operations and the cooperation of the weather. Mop up operations will continue over the next several days. The major wild card for today will be the development of thunderstorms over the fire area. All hazards associated with thunderstorms will be over the fire with potential for down bursts, rainfall, and lightning. All of these may occur alone or together as the day wears on. Be prepared for any situation.

The fire continues interior burn out and numerous hot spots remain in close enough proximity to control lines to cause spotting or isolated runs from downdrafts. Remember parts of the fire are still active.

Fuels: The Day Fire is burning primarily in commercial mixed conifer timber stands actively managed for timber production. Light to moderate slash accumulations as well as piles can be found throughout the fire area. All live fuels are under drought stress with live fuel moisture values at levels well below normal.

Topography: Topography ranges from moderately steep to flat with most of the fire area generally dominated by mild slopes.

SPECIFIC:

Mop up operations are in full force across most of the fire. This is the phase of the operation where most injuries tend to occur. Watch out for Fire damaged trees and hot stump holes.

Divisions C, H, & S: Fire suppression operations are in the final stages and these were the last areas with active fire. This will be the area with the highest potential for control issues as the thunderstorms develop, mature, and collapse.

Divisions V, W, X, & A: Low intensity fire behavior is expected in these divisions. Remember thunderstorm collapse can cause even the quietest fire to come to life.

AIR OPERATIONS:

Smoky conditions will hamper Air Operations all morning and will not completely clear out until around noon.

SAFETY:

Monitor the fire area for the development of thunderstorms after 1200 hrs. Downdrafts and all the other hazards related to thunderstorm development will be over the fire. Watch out for fire damaged trees, hot stump holes, and spot fires outside the line.

SAFETY MESSAGE

com·pla·cen·cy

1. a feeling of security, often while unaware of some potential danger, defect, or the like; self-satisfaction with an existing situation, condition, etc.

- Watch for sudden windshifts, rain, lightning, or hail due to Thunderstorm activity.
- There's no glory in getting hurt during mop up, keep your safety and the safety of your crews as a top priority.
- Stay at least 100 feet away from the train tracks.
- Be aware of what is happening around you (SA) and adapt your exit strategy accordingly.
- Trees are weakened due to fire activity. Look Up, Down, and Around for tree hazards.
- Wetting rain WILL cause the roadways to become slick. DRIVE SLOW!
- Establish COMMUNICATIONS report any coverage issues to your line supervisor.
- Document 2:1 rest and hydration on 214'S. Take frequent breaks!!!
- Beware of stump-holes, steep slopes, trip hazards, and loose footing.

CAL FIRE Incident Management Team 3

Robert Michael – Incident Commander

Thunderstorm Safety

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature.

Rain, hail, and lightning occur only in the mature stage of a thunderstorm.

Situational Awareness

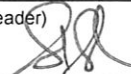

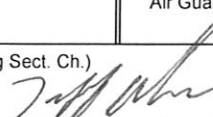

Observe the 30/30 rule: If you see lightning and hear the thunderclaps following in less than 30 seconds take the storm precautions identified below. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

Hazard Control

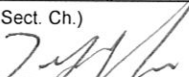

- Take shelter in a vehicle or building if possible.
- If outdoors, find a low spot away from tall trees, wire fences, utility lines and other elevated conductive objects. Make sure the place you pick is not subject to flooding.
- If in the woods, move to an area with shorter trees.
- If only isolated trees are nearby, keep your distance twice the tree height.
- If in open county, crouch low with feet together, minimizing contact with the ground. You can use a pack to sit on, but never lay on the ground.
- If you feel your skin tingle or your hair stand on end, immediately crouch low to the ground. Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Don't stay on ridge tops, wide open areas, or near ledges or rock outcroppings.
- Don't operate landlines telephones, machinery, or electric motors.
- Don't handle flammable materials in open containers or metal hand tools.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
