OUTPUTS

FIRE BEHAVIOR

GENERAL

****Occasional short runs possible in green islands****

Fine Dead Fuel Moisture Predicted: 5% Unshaded, 8% Shaded

Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%) *both critical*

Probability of Ignition = 40% Shaded fuels, 70% Unshaded.

Spotting Distance= 1/4 mile

Forecast ERC: 61 ~90th percentile

Forecast Burning Index: 64

- Expect backing surface fire in timber understory.
- Surface fire in the brush with transition to canopy possible when winds align with slope. *Group torching and short runs possible with torching Max flame lengths up to 75' and 120 ch/hr.*
- **Surface fire transition to crown possible when sustained eye level winds within the fuel sheltering are greater than 6mph.**

SPECIFIC

Branch II

Favorable NW winds contribute to slow, backing fire behavior toward the north into Little Low Gap Creek and the Eel River.

Branch IV ****Anticipate increased fire behavior as burnout operations merge with main fire****

Re-burn potential exists in areas where fire intensity was not adequate to consume the over story. Winds may align with drainages and ignite these areas. Spotting and rollout will continue to challenge crews sending embers up to **¼ a mile**. Terrain dominates the diurnal wind flow within the Eel River Drainage, NW flow aloft may combine and enhance canyon flow towards Horseshoe bend.

Location / Fuel Type	Max Flame Length	Max Rate of spread	Spotting	Probability of Ignition
All Divisions: Timber-Shrub	< 10'	<13 ch/hr	¼ mi	50-70%
Divisions K,L,M,N Moderate Load Timber Litter	< 6'	<11 ch/hr	¼ mi	50-70%
Mid-slopes Broadleaf Litter	< 2'	<2 ch/hr	¼ mi	50-70%
Upper slopes/Isolated patches- Brush	<20	<75 ch/hr	¼ mi	50-70%

AIR OPERATIONS:

Inversion over the fire area until 1200 below 1000'AGL. Afternoon NW winds may impact visibility at the helibase.
Mixing height 7000' AGL

SAFETY

Be alert for re-burn potential in areas where canopy has been scorched/pre-heated.

“LODGE COMPLEX”

CA-MEU 7202 August 13, 2014 0700-070

COMPLACENCY

CAUSES OF COMPLACENCY CAN COME FROM DIFFERENT DIRECTIONS
DON'T GET COMPLACENT!

Now is when some personnel may begin to forget the basics

- Cooler temperatures and the lack of active fire may cause complacency.
- Patrol and mop-up can seem 'routine' causing you to let your guard down.
- Many accidents occur during the wind down of an incident – this is not the time to get hurt.

Mitigation- Situational Awareness, Situational Awareness, Situational Awareness!

- Keep your head in the game!
- Identify those things that may be causing you to become complacent.
- Coach members of your team and take care of one another.

FATIGUE

FATIGUE MAY COMPORMISE SAFETY!

Be on the lookout for signs of fatigue – look out for one another - Look For:

- Chronic feelings of exhaustion, feeling “spacey.”
- Impaired decision-making and judgment • Low motivation • Moodiness.
- An inability to pay attention and short-term memory problems, confusion.
- Slowed reflexes and responses.

Mitigation – Proper nutrition reduces fatigue

- Eat foods, which provide steady energy • limit sugary, fatty, fried foods.
- Hydrate - proper hydration prevents fatigue.
- Manage work rest ratio while performing work.
- Take full advantage of time off line to rest.

DEMOB

ACCIDENTS CAN HAPPEN DURING DEMOB

Be on the lookout for vehicle and pedestrian congestion

- Vehicles will be moving in tight areas around Ground Support and parking areas.
- Increased backing and maneuvering of vehicles in tight spots.
- Crews may be in a hurry to leave the incident due to reassignment.

Mitigation- Maintain high levels of situational awareness through the demob process.

- Provide back-up and spotter personnel - more than one may be required
- Drive safely and be on the lookout for ICP pedestrian traffic
- Drive safely and monitor fatigue when traveling to home unit or new incident.

FIRE SUPPRESSION REPAIR PLAN

LODGE COMPLEX: CA-MEU-007202 8/13/2014

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities. It is not the repair of areas damaged by the fire activity itself such as burned material and secondary damage such as falling trees or erosion from hydrophobic soils. We are responsible for repairing only the damage caused by *fighting* the fire. We are also not responsible for upgrading facilities beyond their pre-fire condition.

Instructions for suppression repair during mop-up

Dozer operators will install waterbreaks (waterbars) on all dozer lines as well as secondary access roads while performing mop-up operations. *Dozer lines amongst the structures* shall have the berms pulled and waterbreaks installed where necessary with hand crews to minimize the impacts on residents. Hand crews will install waterbreaks on all handlines.

Scattered trash shall be collected and deposited in trash piles. Trash piles will be removed and placed at drop points either before or while hose lays are collected. Police your areas and clean them up as events wind down.

Inventory and Mapping

Suppression overhead and other personnel will document rehabilitation needs and their location. This information will be given to the Fire Suppression Repair Group. **GREEN** flagging will be used to designate areas in need of repair. The type of repair/instructions will be written directly on the green flagging for ease of use.

Objectives

- Install waterbreaks while crews and dozers are actively onsite on roads, trails, and handlines damaged by fire suppression. Waterbreaks shall have proper angle and open outlets to insure effective drainage.
- Repair damaged fences (remember, those portions damaged by suppression efforts, not by the fire itself).
- Restore barriers on roads that were previously abandoned but opened for suppression activities.
- Insure that drainage is provided at crossings, ditch drains, remove deposited material, and stabilize approaches.
- Report any damages or damages mitigated to the Fire Suppression Repair Unit leader.
- Complete all repair work prior to final demobilization.

Firelines/Existing Fuelbreaks/Staging Areas/Safety Zones/Heliports/Drop Points

- Remove debris deposited during suppression activities, including flagging and signs.
- Install waterbreaks.
- Pull berms back onto disturbed areas, except in areas identified as needing a berm to serve as a barrier for roads/trails.
- On Federal land, spread brush across the disturbed areas to provide ground cover and a seed source.
- On Federal land, masticators/excavators/dozers with brush rakes will be utilized on existing fuelbreaks utilized during suppression efforts to reduce any excessive fuel loading within a WUI Threat or Defense Zone.

Roads

- Clean culverts and drainage facilities plugged with soil and debris deposited during suppression activities.
- Re-establish cross drains and drainage if removed or made inoperable by suppression activities. Use cut brush – if available and nearby – to block off potential OHV access. On Federal land, break up piles and scatter brush over the fireline.
- Remove outboard berms created during suppression activities and incorporate into road surface.

Watercourses

- All slash, soil and debris deposited into watercourses during suppression activities shall be removed.
- All loose soil must be pulled away from the watercourse and stabilized (graded smooth, and slash packed for cover).
- If excavated, the stream channel will be wider than the natural channel and set to natural grade. The approaches to the crossing will be sloped back to prevent future stream bank failure.

Archaeological or Historic Sites – Notify incident Archaeologist and Fire Suppression Repair Group.

Waterbreak/Waterbar/Cross Drain spacing

Line or Road Gradient (%)	0-10%	11-25%	26-50%	>50%
Spacing	200'	100'	75'	50' (25' on Federal land)

Waterbreaks shall be cut diagonally with a minimum depth of 6" into existing grade with a 12" berm for a minimum height of 18". Waterbreaks will be installed at a 30-45 degree angle. Outlets shall be open and directed into non-erodible material.

Conflicts with Suppression Activities

Postpone repair activities that hamper access or other suppression actions. The location of needed repair actions shall be noted and relayed to the Fire Suppression Repair Group. **DO NOT** compromise fire lines by spreading flammable material across them.

DEMOB

CAL FIRE

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
