CA-MEU-007202

OPERATIONAL PERIOD

AUGUST 8TH 0700 TO
AUGUST 9TH 0700

INCIDENT OBJECTIVES	1. INCIDENT NAME Lodge Complex	2. DATE 8/7/14	3. TIME 2000																				
4. OPERATIONAL PERIOD (DATE/TIME) 8/8/13 – 8/9/14 0700-0700																							
5. MANAGEMENT OBJECTIVES <ul style="list-style-type: none"> • Provide for and maintain public and firefighter safety by utilizing the incident safety analysis process. • Protect the natural and cultural resources values at risk. • Be financially responsible for all management and fire suppression tactics. • Foster and enhance community, political, and economic relationships. 6. GENERAL CONTROL OBJECTIVES <ul style="list-style-type: none"> • Keep fire South of the Big Bend of the Eel River. • Keep fire North of Lincoln Ridge. • Keep fire West of Elk Creek Ridge. • Keep fire East of Hollow Tree Creek. • Branch III – hold fire within current control lines. 																							
7. WEATHER FORECAST FOR OPERATIONAL PERIOD Warm and dry conditions will continue through the operational period. Ridge top winds will remain from the northwest to north and will be a bit gustier than previous days. For the lower elevations, expect typical winds.																							
8. GENERAL SAFETY MESSAGE Fatigue may compromise safety. Be on the lookout for signs of fatigue. Poor visibility, narrow roadways and steep terrain all align for dangerous driving conditions. Lookout for topography driven fire conditions, loose rocks and boulders.

WEATHER SUMMARY

Hot and dry weather will continue with an increase of wind from previous operational periods. The wind will be from the North/Northwest. Winds in deep drainages and valleys may act erratic as topographic channeling affects its flow. Fuel will react to the lower RH and higher temperatures to present more active burning conditions. The inversion that has dominated the area still has a good chance of remaining over the area hampering visibility. SEE ATTACH INCIDENT

WEATHER FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

Probability of Ignition = 57%.

Spotting Distance= 1/2 mile

Energy Release Component in Timber Fuels are at 97th percentile levels or above.

Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%)*Both at Critical level***

The fire continues to consume timber understory with some isolated tree torching. Rollout and slope reversal still continue to make more active runs and may challenge control lines. The fire area has no fire history in the last 50 years and no known thinning or fuel modification. Nighttime firing operations have been successfully consuming fuel under high relative humidity.

SPECIFIC

Branch I

Interior island in steep terrain may send burning material over control lines. Depth of previous burn operations may be tested if jackpots of unburned become active. Tree tops that remain hot now may broadcast embers with increased ridge top winds.

Branch II

Steep and inaccessible terrain continues to allow the fire to progress to north toward Little Low Gap Creek. The primary carrier of the fire is Timber litter. Rates of spread in the **Timber Litter** will be up to **18 ch/h** and flame lengths up to **7 ft**. If the fire transitions into pockets of **Brush** in the branch rates of spread will increase to **130 ch/h** and have flame lengths exceeding **20 ft**. Spotting from torching trees could send embers out to **1/3 of mile**. Predicted North/Northwest winds should be favorable in Branch II and push the fire back onto itself. Smokey conditions have limited air resources ability to be affective. Air support may not be available for any increase in fire activity so all crews need to plan accordingly. Any night firing operations can expect max relative humidity up to 75% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

Branch IV

Predicted increased ridge top winds may increase fire activity in Branch IV. North/northwest wind may align with the South Fork River drainage and accelerate winds from the north. Rollout and slope reversal runs have been consuming the **Timber Litter** with rates of spread up to **18ch/h** and have **7 ft** flame lengths. There are pockets of **Brush** that have been active and rates of spread will increase to **130 ch/h** and flame lengths will exceed **20 ft** is any up hill runs become established. Individual and group spotting will continue to challenge crews sending embers up to **1/2 of a mile**. Crews should identify Safety zone for expected fire behavior should be no less then 1 acre in diameter (60 personnel and equipment). Any night firing operations can expect max relative humidity up to 75% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

AIR OPERATIONS:

Inversion may not lift making visibility poor and may restrict air operations.

SAFETY

- Don't let complacency compromise your safety, the potential for large scale growth is still possible
- Changing weather will bring a change in fire behavior plan all operations with that in mind
- Rollout and slope reversal have challenged suppression efforts each operational period, identify the potential for changing fire spread

SAFETY MESSAGE

“LODGE COMPLEX”

CA-MEU 7202 August 8, 2014 0700-0700

FATIGUE

FATIGUE MAY COMPROMISE SAFETY!

Be on the lookout for signs of fatigue – look out for one another - Look For:

- Chronic feelings of exhaustion, feeling “spacey”.
- Impaired decision-making and judgment • Low motivation • Moodiness.
- An inability to pay attention and short-term memory problems, confusion.
- Slowed reflexes and responses.

Mitigation – Proper nutrition reduces fatigue

- Eat foods, which provide steady energy • limit sugary, fatty, fried foods.
- Hydrate - proper hydration prevents fatigue.
- Manage work rest ratio while performing work.
- Take full advantage of time off line to rest.

TOPOGRAPHY

TOUGH COUNTRY TO WORK IN!

Be on the lookout for topography driven fire conditions and loose rocks and boulders throughout the incident area.

- Steep slopes may cause rolling material hazards.
- This terrain will cause quick, unexpected upslope fire behavior.
- Significant slip hazard exist throughout the incident.

Mitigation – Maintain high level of situational awareness.

- Post lookouts and monitor changes in fire behavior.
- Watch out in areas with steep slopes and watch your footing.
- Listen for rolling rocks and boulders and ‘yell out’ to others around you.

DRIVING

BASED ON THE NIOSH ANNUAL FIRE FIGHTER FATALITY REPORT THE SECOND LEADING CAUSE OF FIRE FIGHTER FATALITIES IS DRIVING.

Maintain a high level of situational awareness in all driving situations and while working near roadways

- Very narrow, steep roads exist throughout the fire area.
- Some areas of the fire require long travel times.
- Smoke conditions at times are compromising visibility.

Mitigation – Drive with a high level of Situational Awareness and adjust driving techniques according to your situation.

- Don’t “thread the needle”. Don’t take your vehicle where it doesn’t belong.
- Use spotters and back-up personnel in tight situations.
- If you’re feeling drowsy, don’t drive. Stop and rest, change drivers or contact ground support and request a relief driver.

CAL FIRE

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
