WEATHER SUMMARY

Hot and dry weather will continue with slight decrease in afternoon wind that will come from the West/Northwest. Winds in deep drainages and valleys may act erratic as topographic channeling affects its flow. Nighttime RH recovery up to 80% should provide favorable conditions for any burn operations. The inversion may smoke in air resources and limit their effectiveness. SEE ATTACH INCIDENT WEATHER FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

Probability of Ignition = 57%.

Spotting Distance= 1/2 mile

Energy Release Component in Timber Fuels are at 97th percentile levels or above.

Live Fuel Moisture= CHAMISE (50-60%) MANZANITA (75-80%)* **Both at Critical level***

The fire continues to consume timber understory and chaparral with some transitions to canopy. The fire has moved into more of a brush fuel model in Branch IV and become more active on west slopes. Rollout and slope reversal still continue to make more active runs and may challenge control lines. The fire area has no fire history in the last 50 years and no known thinning or fuel modification. Nighttime firing operations have been successfully consuming fuel under high relative humidity.

SPECIFIC

Branch I

Interior island in steep terrain may send burning material over control lines. Depth of previous burn operations may be tested if jackpots of unburned become active. Treetops that remain hot now may broadcast embers with increased ridge top winds.

Branch II

Burn periods have been increasing more each day since the monsoonal moisture moved from the area. Steep and inaccessible terrain continues to allow the fire to progress to north toward Little Low Gap Creek. The primary carrier of the fire is Timber litter. Rates of spread in the **Timber Litter** will be up to **18 ch/h** and flame lengths up to **7 ft**. Predicted West/Northwest winds should be favorable in Branch II and push the fire back onto itself. Smokey conditions have limited air resources ability to be affective. Visibility under heavy canopy will limit crew's ability to monitor the main fire so lookouts in good vantage points are essential. Any night firing operations can expect max relative humidity up to 80% between 2300 and 0400 this may not allow for complete consumption and potential for re-burn will be possible.

Branch IV

EXPECT INCREASE IN FIRE ACTIVITY The fire will transition into more of a brush fuel model as it becomes more established on the east side of the Eel River. Expected rates of spread in the **Brush** will be up to **130 ch/h** and flame lengths will exceed **20 ft** when up hill runs become established. Potential for crown runs are high when slope and ground fuels are favorable. Burn periods have increased in time and intensity challenging efforts in the previous operational period. Afternoon winds may align with both Tenmile and Hogshed drainage and will push fire into control lines to the east and south. Spotting will continue to challenge crews sending embers up to **1/2 of a mile**. Crews should identify Safety zone for expected fire behavior should be no less then 1 acre in diameter (60 personnel and equipment). Any night firing operations can expect max relative humidity up to 80%.

AIR OPERATIONS:

Inversion may not lift making visibility poor and may restrict air operations.

Narrow canyons and drainages may limit the effectiveness of airdrops from fix-winged aircraft.

SAFETY

Don't let complacency compromise your safety, expect increase in fire activity

Rollout and slope reversal have challenged suppression efforts each operational period, identify the potential for changing fire spread

Lookouts are essential when crew can not see the main fire due to heavy canopy

SAFETY MESSAGE

“LODGE COMPLEX”

CA-MEU 7202 August 9, 2014 0700-0700

FATIGUE

FATIGUE MAY COMPROMISE SAFETY!

Be on the lookout for signs of fatigue – look out for one another - Look For:

- Chronic feelings of exhaustion, feeling “spacey”.
- Impaired decision-making and judgment • Low motivation • Moodiness.
- An inability to pay attention and short-term memory problems, confusion.
- Slowed reflexes and responses.

Mitigation – Proper nutrition reduces fatigue

- Eat foods, which provide steady energy • limit sugary, fatty, fried foods.
- Hydrate - proper hydration prevents fatigue.
- Manage work rest ratio while performing work.
- Take full advantage of time off line to rest.

TOPOGRAPHY

TOUGH COUNTRY TO WORK IN!

Be on the lookout for topography driven fire conditions and loose rocks and boulders throughout the incident area.

- Steep slopes may cause rolling material hazards.
- This terrain will cause quick, unexpected upslope fire behavior.
- Significant slip hazard exist throughout the incident.

Mitigation – Maintain high level of situational awareness.

- Post lookouts and monitor changes in fire behavior.
- Watch out in areas with steep slopes and watch your footing.
- Listen for rolling rocks and boulders and ‘yell out’ to others around you.

DRIVING

BASED ON THE NIOSH ANNUAL FIRE FIGHTER FATALITY REPORT THE SECOND LEADING CAUSE OF FIRE FIGHTER FATALITIES IS DRIVING.

Maintain a high level of situational awareness in all driving situations and while working near roadways

- Very narrow, steep roads exist throughout the fire area.
- Some areas of the fire require long travel times.
- Smoke conditions at times are compromising visibility.

Mitigation – Drive with a high level of Situational Awareness and adjust driving techniques according to your situation.

- Don’t “thread the needle”. Don’t take your vehicle where it doesn’t belong.
- Use spotters and back-up personnel in tight situations.
- If you’re feeling drowsy, don’t drive. Stop and rest, change drivers or contact ground support and request a relief driver.

BASE CAMP SAFETY MESSAGE “LODGE COMPLEX”

HYGIENE

DON'T CONTRIBUTE TO THE POTENTIAL DEVELOPMENT OF THE 'CAMP CRUD'

Mitigation – Practice good health and hygiene

- Wash hands and face before entering chow line.
- No Nomex in chow line, serving or eating areas.
- Wear foot protection in shower areas.
- Report health and safety concerns to Facilities, Safety or any IMT 4 member with a red hat.

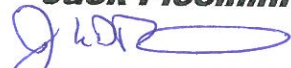

DRIVING IN CAMP

BASED ON THE NIOSH ANNUAL FIRE FIGHTER FATALITY REPORT THE SECOND LEADING CAUSE OF FIRE FIGHTER FATALITIES IS DRIVING.

Mitigation – Drive with a high level of Situational Awareness in and around the camp

- Use spotters and back-up personnel in tight situations. Regardless of your department policy, Cal Fire IMT 4 requires back-up personnel for all backing situations.
- No cots, tents or sleeping on the ground in or around parking areas
- Be on the lookout for pedestrian traffic around parking areas and along travel routes within the camp.
- Watch-out for fast moving traffic on Highway 101 when entering and leaving camp.
- Remember, Highway 101 drivers may be distracted by looking at the camp while driving.

CAL FIRE

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

Fireline personnel- (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

Aviation Operations-

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214 Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
