# INCIDENT Weather Forecast

FORECAST NO: 6

NAME OF FIRE: Bully Fire

PREDICTION FOR: Friday Day/Night SHIFT UNIT: SHU

SHIFT DATE: July 18/19 2014

SIGNED: *Mike Smith*  
Incident Meteorologist: Mike Smith

### TIME AND DATE

FORECAST ISSUED: 2100 July 17

**WEATHER DISCUSSION:** Monsoon moisture will feed into the fire area one more day bringing elevated humidity and a slight threat of afternoon and evening thunderstorms. Light showers will also be possible in the fire area. The general wind pattern will remain fairly light Friday but if any thunderstorms form in the area, strong downdraft winds will be a possibility. The best threat of thunderstorms will be over the higher elevations to the west of the fire. Surface winds should remain mainly slope generated Friday with temperature and moisture remaining cooler and moister than normal for mid July. High pressure will start to displace eastward on Saturday bringing a more onshore flow for drying and clearer skies. Some east facing drainages may see enhanced downcanyon winds in the early morning hours with slope/canyon driven winds returning during the day.

**WEATHER:** Fair to partly cloudy skies. A slight chance of a shower or thunderstorm or a thunderstorm outflow passage. Best chance of thunderstorms during the afternoon and evening hours.

**TEMPERATURES:** High temperatures 88 to 94

**HUMIDITY:** 25% lower south slopes and ridgetops to 32% north slopes and shaded areas.

### 20 FT WINDS:

**RIDGETOP** - Light southeast to 5 mph though the day with occasional gusts to 10 mph in the afternoon then shifting to northeast to 5 mph after about 2100

**SLOPE/VALLEY** - Downslope/downcanyon 2 to 5 mph with occasional gusts to 8 mph through about 0900. Becoming upslope to upcanyon 3 to 8 mph with gusts to 12 mph. Some gusts to 16 mph up southeast facing canyons. Gusty winds possible from nearby thunderstorms.

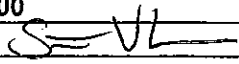

**STABILITY/INVERSION:** Slightly unstable conditions through the day. Inversions holding in through mid day.

**OUTLOOK FOR Friday night:** Partly cloudy. A slight chance of an early evening shower or thunderstorm in the area. Clearing skies overnight. Minimum overnight temperatures 61 ridgetops to around 68 in thermal belts along the slopes. Maximum humidity recovery 50 to 55%. Winds on the ridges light northeast to 5 mph. Slope winds decreasing after sunset and becoming mainly downslope to downcanyon after about 2000 3 to 7 mph. For east facing canyons...downcanyon winds 5 to 9 mph with gusts to 15 mph. Gusty winds possible in the evening in vicinity of thunderstorms.

**OUTLOOK FOR Saturday:** Mainly fair skies. High temperatures 89-95. Minimum humidity values 22 to 28%. Ridgetop winds northeast to 5 mph with some gusts to 10 mph in the afternoon. Ridge winds becoming light and variable after sunset. Slope winds downslope to downcanyon in the morning hours 3 to 7 mph except east facing canyons 5 to 10 gusts to 15 mph. After about noon...slope winds becoming upslope to upcanyon 3 to 8 mph. Some gusts 12 to 16 mph up east facing canyons.

**EXTRA INFORMATION:** July 17 Sunrise 5:56 Sunset 8:38

## FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 6	TYPE OF FIRE: FULL SUPPRESSION
FIRE NAME: BULLY	OPERATIONAL PERIOD: 7/18/14 24-HOUR
DATE ISSUED: 7/17/14	TIME ISSUED: 2100
UNIT: CAL-FIRE SHASTA TRINITY UNIT SHU	SIGNED: 
Typed/printed: Stephen Volmer FBAN (T)	

### INPUTS

#### WEATHER SUMMARY:

Temperatures will cooler due to the monsoonal moisture remaining. RH minimums between 25 and 30%, with temperatures in the high 80's. Erratic winds could surface should thunder cells develop in the surrounding areas. Inversion will be present until mid afternoon. See IMET forecast for more detail.

### OUTPUTS

#### FIRE BEHAVIOR

**GENERAL:** Combinations of direct sunlight and RH's below 40% will produce increased flame lengths and ROS. Spotting distance up to 1/3 mile with a Probability of 85% can be expected for fires coming into alignment with slope and winds.

**\*\*\*Fire activity will greatly increase with the alignment of slope and wind in ALL areas\*\*\***

#### SPECIFIC:

**DIV A/C/W/Y:** No movement or fire activity anticipated. Be alert for spot fires in remaining unburned islands.

**DIV F/K:** Low intensity fire will continue to consume surface fuels as the fire backs into the drainage at .5 ch/hr with 2 foot flame lengths. Fire activity will decrease dramatically when the RH climbs above 40%. Steep slopes will contribute to rolling material and spot fires in the drainage bottoms.

**DIV Q:** Fire will back into the East fork of Baker Creek under the canopy. Spots established in the drainage bottoms will have potential for slope reversal towards the E3 and E4 road systems. ROS will be 25 ch/hr with 10 foot flame lengths should this occur. Spot fires will become easily established.

**DIV R:** Expect increased fire intensity in the brush fields and logging areas. ROS in these areas will be up to 30 ch/hr. Backing fires to creep into the drainage bottom at 1ch/hr with 2 foot flame lengths. Steep slopes will result in an increased amount of roll out into the East Fork of Duncan Creek. Spot fires will become easily established in all areas to the East and North of Billy Choop Rd.

**DIV S:** Watch for spot fires towards the East to become established. Smoldering surface fuels and timber will continue to pose a threat.

#### AIR OPERATIONS:

Smoke conditions will limit air operations in DIV Q/R/S, expect air to clear out after 1300. Thunder cells in the area will produce erratic wind conditions.

#### SAFETY:

Unburned islands of fuel have a high potential to ignite should any spot fires become established in them. Posted lookouts need to be able to see into the drainage bottoms. Expect erratic winds in the event of thunder cell production in the area. Call in weather observations to the Communications Unit when radio traffic allows.

# INCIDENT MANAGEMENT TEAM 6

<b>SAFETY MESSAGE</b>	<b>1. INCIDENT NAME:</b> Bully Incident	<b>2. DATE PREPARED:</b> July 17th, 2014	<b>3. TIME PREPARED:</b> 19:00
	<b>4. PREPARED BY:</b> Gabriel Santos SOF1	<b>5. LEADER NAME:</b> Gabriel Santos SOF1	<b>6. OPERATIONAL PERIOD:</b> 07-18-14 0700 TO 07-19-14 0700

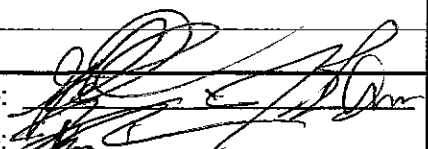

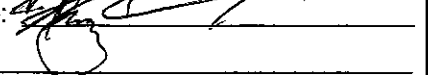

# SAFETY MESSAGE

***"If it is predictable" "It is preventable"!***

- Day eight of the incident, keep your safety and the safety of your crews as a top priority. Fatigue and complacency is a major factor to injuries.
  - Snags everywhere are burning through and falling more frequently than usual for this time of year. Maintain your situational awareness and establish LCES!
  - Maintain hydration with a balanced nutritional meal intake. Use three to one water to electrolyte ratio.
  - Watch your footing! This fire is burning in steep and rocky terrain, twisted ankles and knees are frequent.
  - HEADS UP!!! Look out for falling rocks and boulders, be aware of crews working above you during mop up. If you kick something loose, YELL, "ROCK" to warn those crews below you.
  - Take care of your feet!!! Change your socks regularly and get prompt medical attention for blisters.
  - Exercise caution while driving to and from the incident base. SLOW DOWN! Drive defensively with your headlights on and always wear your seatbelts.
  - Be aware of possible mine shafts and marijuana plantations in the fire area. Identify the hazard areas with the three stripes life hazard flagging and report the hazard (s).
- \* Be aware of poison oak.

# CAL FIRE INCIDENT MANAGEMENT TEAM 6

## Thunderstorm Safety

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail, and lightning occur only in the mature stage of a thunderstorm.

## Situational Awareness

Observe the 30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions identified below. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

## Hazard Control

- Take shelter in a vehicle or building if possible.
- If outdoors, find a low spot away from tall trees, wire fences, utility lines and other elevated conductive objects. Make sure the place you pick is not subject to flooding.
- If in the woods, move to an area with shorter trees.
- If only isolated trees are nearby, keep your distance twice the tree height.
- If in open country, crouch low, with feet together, minimizing contact with the ground. You can use a pack to sit on, but never lay on the ground.
- If you feel your skin tingle or your hair stand on end, immediately crouch low to the ground. Make yourself the smallest possible target and minimize your contact with the ground.
- Don't group together.
- Don't stay on ridge tops, wide open areas, or near ledges or rock outcroppings.
- Don't operate landline telephones, machinery, or electric motors.
- Don't handle flammable materials in open containers or metal hand tools.

# Incident Management Team 6

## **SAFETY ALERT**

From IMT 6 SOF1 Gabriel Santos

### **HEAT RELATED ILLNESS**

### **"If it is Predictable it is Preventable"**

Due to record-breaking high temperatures and drought conditions expected throughout California all incident personnel shall review and implement the following Heat Related Illness Prevention guidelines and document the training on you unit log (ICS 214 form).

Heat-induced illness is a result of the body's inability to cope with heat. This can be a minor symptom or a serious life-threatening injury. While recognition and treatment are important, prevention is the key. **HEAT RELATED ILLNESS IS PREVENTABLE.**

Becoming acclimated to working in a hot environment takes time.

- It normally takes 4-8 days to acclimate
- Fatigue and alcohol consumption delays this process
- Persons not acclimated are at increased risk and can suffer heat-related illness at lower levels of heat and work activity

Personnel need to pre-hydrate before work and continuously hydrate during work.

- Water is the primary form of fluid replacement
- Before work, it is recommended to drink 20 ounces of sports drink
- During work drink 8 ounces of water every 15 minutes (1 Quart/hour)
- Cool / cold water is preferred
- Consider a carbohydrate / electrolyte sports drink as a portion (25%-50%) of the fluid intake

#### **Avoid Hyponatremia**

- Hyponatremia develops when the concentration of sodium is diluted in the bloodstream
- Exercise-induced hyponatremia occurs when this phenomenon is caused by excess water intake during exercise or work
- Proper nutrition and consumption of carbohydrate/electrolyte sports drinks as part of hydration will assist in avoiding hyponatremia
- Symptoms can include disorientation, headache, muscle cramps and nausea

#### **Avoid Certain Drinks**

- To help prevent dehydration, **avoid** carbonated beverages and performance beverages such as Red Bull, Rock Star, Monster Drinks, etc.
- Caffeine hastens fluid loss in the urine.

#### **Web Resources**

**8. MEDICAL EMERGENCY PROCEDURES**

**LINE EMERGENCY:**

- CREW SUPV notifies DIVS with pt. COMPLAINT, CONDITION and LOCATION
- Division/Group Supervisor contacts:
    - Closest EMS resource
    - Communications Unit, "DECLARE EMERGENCY"
  - Communications Unit contacts:
    - Ground or Air Ambulance (Air Rescue and/or Air Transport)
    - Operations
    - Safety
    - Medical Unit
  - Division Supervisor or designee will serve as point of contact and run medical emergency on assigned channel
    - A pre-assigned tactical frequency (ie:CALCORD) should be used for IWI and only for duration of need.
  - Communications Unit will clear command channel for emergency traffic as needed and only for duration of need.

**CAMP EMERGENCY:**

- Contact Medical Unit with patient COMPLAINT, CONDITION and LOCATION. Medical Staff will respond to stabilize incident.
- Medical Unit contacts:
    - Communications
    - Safety
    - Logistics
    - Operations
    - Crew Supervisor
    - Comps/Claims

**INJURY REPORTING PROCEDURES**

# Fire Suppression Repair

## Roads

- Install waterbars where a waterbars previously existed.
- Install new waterbars where needed.
- Install or maintain a rolling dips where a rolling dip previously existed.
- Re-establish existing berms where applicable.
- Clean culverts plugged with soil and rock resulting from fire road use.
- Remove all slash and debris from culvert inlets/outlets.
- Clean and grade ditch lines and lead off ditches ass necessary.
- Water roads for dust abatement.

## Hand Lines and Dozer Lines

- Install waterbars as described in the guidelines below. Waterbars are designed to intercept, sow and spread the precipitation run-off in order to reduce sediment transport and soil erosion. The idea is to move water off the fireline before it can build up enough energy to erode and transport sediment.

## Waterbar Guidelines:

These spacing distances should be used as a *guide*. Judgment should be used in locating waterbars to minimize erosion potential. It may not be possible or necessary to place waterbars in steep or rocky areas. Install waterbars at the following recommended *minimum* intervals:

Fireline Gradient (%slope)	Minimum Distance between Waterbars (feet)
0 to 10	200
11 to 25	100
25+	50

# CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

## *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

### **Fireline personnel-** (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

### **Aviation Operations-**

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.

### **Public/ Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.

### **Management and Supervision-**

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
