

Boles Incident

CA-SKU-007064

OPERATIONAL PERIOD

Thursday September 18th 0700 to
Friday September 19th 0700

INCIDENT OBJECTIVES	1. INCIDENT NAME Boles	2. DATE 9/17/14	3. TIME 2000																				
4. OPERATIONAL PERIOD (DATE/TIME) 9/18/14 – 9/19/14 0700-0700																							
5. MANAGEMENT OBJECTIVES <ul style="list-style-type: none"> • Provide for and maintain public and firefighter safety by utilizing the incident safety analysis process. • Encourage and conduct unified damage inspection with all affected agencies • Be financially responsible for all management and fire suppression tactics • Foster and enhance community and political relationships • Evaluate economic impacts to the community 																							
6. GENERAL CONTROL OBJECTIVES <ul style="list-style-type: none"> • Keep the fire north of Hidden Meadows • Keep the fire south of Carrick Creek • Keep the fire east of Interstate 5 • Keep the fire west of Shasta National Forest Boundary • Provide resources for Initial Attack Incidents 																							
7. WEATHER FORECAST FOR OPERATIONAL PERIOD A sharp pattern change is underway as a weak Pacific low pressure system tracks across northern California. Expect more clouds, cooler temperatures and lighter south east winds, although gusts could still hit 20 to 25 mph. There is a slight chance of light showers or sprinkles, but they will be "hit and miss."																							
8. GENERAL SAFETY MESSAGE Watch out for electrical hazards. Watch out for traffic hazards. Watch out for hazardous materials and IDLH conditions.

BOLES INCIDENT WEATHER FORECAST

Incident: **Boles Fire**

Operational Period **Thu Sep 18th 0700-0700**

Issued 1700 PDT Wednesday Sep 17th, 2014

DISCUSSION:

A sharp pattern change underway as a weak Pacific low tracks across Northern CA. More clouds and cooler temperatures today with lighter SE winds, although gusts could still hit 20-25 mph or so. There is a slight chance of light showers or sprinkles, but they will be "hit & miss". By Friday the low moves southeast of the area and Pacific High Pressure builds in behind it with a significant warming/drying trend once again, but winds should be light and from the northeast.

FORECAST:

Today (Thursday): Mostly Cloudy & cooler. Brief shower possible. Max temp 73-78 deg. Min RH 30-35%. Winds, becoming SSE 10-15 mph gusts 20 mph by afternoon. Gusts 25 mph on nearby upper slopes.

Tonight: Partly to Mostly Cloudy. Min temp 50-55 deg. Max RH 45-55%. Winds SSE 8-13 mph gusts 20 mph. thru midnight, diminishing to light/variable 2-6 mph late.

Friday: Sunny...warmer & drier. Max temp 84-89 deg, Min RH 15-20%. Winds becoming NNE 5-10 mph gusts 15 mph.

Outlook for Saturday: Sunny, hot & dry. Max temp 87-92 deg, Min RH 10-15%. Wind NE 5-10 mph gusts 15 mph.

INPUTS

WEATHER SUMMARY

A slight decrease in wind and increase in relative humidity will help to diminish the chance of spot fires outside of control lines. The area of the fire will still be influenced by down canyon winds off of Mt Shasta and any spots will require immediate action. There is a chance of rain over the incident but rain fall amounts will be less than 1/10 of an inch if any at all.

SEE ATTACH FIRE WEATHER FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

The fire is mostly wind driven and has been aided by drought stressed fuels. The Energy Release Component for the Weed Airport has been at historic highs for the last week and remains above the 97th percentile. The fire area is a mix of brush, timber and grass and did transition to crown in the initial attack phase of the incident. Winds will still present the potential for spot fires from embers blowing off snags and will find receptive fuel beds outside of control lines. This fire has potential to re-establish itself and make significant runs through the brush and transition to crown.

SPECIFIC

BRANCH I

All divisions in this branch have been wind tested in the previous operational period with no growth or spots. Any hot material within 500 ft of the line will still present an opportunity for an escape from gusty winds. The prevailing wind is primarily from the south but can channel around topographic features and create wind direction other than predicted. If spot fires become established outside of control lines fire growth will be rapid and produce rates of spread in excess of 40ch/h with 20+ft flame lengths with long range spotting. Division B will have the greatest potential for an escape as the prevailing wind will push against control line and have ample dry fuel to carry fire.

BRANCH II

Heavy snags that still have heat in the upper portions of the trees can send embers across control lines and establish spot fires that will find dry receptive fuel beds. Winds will eddy around topographic features and may surface as something other than the predicted south wind. Any fire that becomes established will have rates of spread in excess of 40ch/h and 20+ft flame lengths. Division M is in alignment to the wind and will have the most potential for any escapes. Any spots outside of control lines will require rapid suppression to remain within the control objectives.

AIR OPERATIONS:

- Gusty winds will limit the effects of air drops
- Dust from ash may lift and limit visibility
- Crews will be working under snags and water drops may bring fire damaged trees down

SAFETY

- Hazard trees will kill you, know where you are working at all times and look up!
- Don't let a lack of fire activity create a complacent attitude, the fuel is still ready to burn
- Spot fires will still burn despite the cool weather, winds will still gust up to 25mph

SAFETY MESSAGE

BOLES

CA-SKU 7064 SEPTEMBER 18, 2014 0700-0700

ELECTRICAL HAZARDS

UTILITY COMPANY IS "RE-ENERGIZING"

Watch out for electrical hazards in burned out dwellings and down power lines

- Power lines may be hidden.
- Utility workers may miss underground service that may be damaged.
- Electrical arc can travel long distances.

Mitigation – Look up to live- Look up, Look Down, Look all around.

- Visually check power poles to identify service lines leading to underground service
- Treat all electrical panels and power lines as if they are charged
- Make contact and communicate with utility workers working in your area.

TRAFFIC

CIVILIAN POPULATION IN THE FIRE AREA

Maintain a high level of situational awareness in all driving situations and while working near roadways

- Watch for high speed vehicles and people becoming stressed.
- Watch for distracted civilians driving through the area.

Mitigation – Drive with a high level of Situational Awareness

- Practice defensive driving techniques.
- Wear DOT Highway vests when working in, around and near traffic.
- Use warning lights as appropriate when on roadways.

HAZARDOUS MATERIAL AND IDLH

HAZARDOUS MATERIALS AND IDLH CONDITIONS MY BE PRESENT IN AREA

Maintain high levels of situational awareness

- Burned structures with household and industrial waste may be present.
- High levels of carbon monoxide, toxic gases and particulates will be present during structure overhaul.
- PPE can become contaminated during structural overhaul.

Mitigation – Maintain situational awareness for the unexpected.

- Wear N95 masks and SCBA as necessary.
- Isolate and deny entry for all hazardous material and IDLH situations.
- Identify, flag, and/or mark Hazards.

AIR OPERATIONS SUMMARY

(Expanded Form for Large Operations)

OPERATIONAL PERIOD DATE: DAY SHIFT DATE: 9/18/14 START: 0800 END: 1900

1. INCIDENT NAME: Boles	2. PREPARED BY: Mark Gradek	PREPARED DATE/TIME: 9/17/14 1700	3.
4. REMARKS (Safety Notes, Hazards, Air Operations Special Equipment, etc.): -All GPS data to be collected in (Degrees, minutes, and decimal minutes) -Avoid aerial application of retardant or foam within 300' of waterways, bodies of water. If retardant is dropped within these areas, notify the helibase with Lat/Long, estimate of gallons, and a map. -All requests for recons to go through Air Ops or Air Support. -Track drop locations for cost apportionment. -Track dipsite locations.			
5. TFR: Altitude: Radius: Freq: NOTAM #		SUNRISE: 0655 SUNSET: 1915 CUTOFF: 1845

8. MEDICAL EMERGENCY PROCEDURES

EMERGENCY FREQUENCY: CALCORD

LINE EMERGENCY:
Crew Supervisor will contact Division Supervisor with patient complaint/condition and location.

- Division/Group Supervisor contacts:
 - Closest EMS resource
 - Communications Unit
- Communications Unit contacts:
 - Ground or Air ambulance as requested
 - Operations
 - Safety
 - Medical Unit (916) 622-3371
- Division Supervisor or designee will serve as point of contact and run medical emergency on assigned channel.
 - A pre-assigned tactical frequency (i.e. CALCORD) should be used for IWI and only for duration of need.
- Communications Unit will clear command channel for emergency traffic as needed and only for duration of need.

CAMP EMERGENCY:
Contact Boles Communications on CALCORD with patient complaint/symptoms and location. Boles Communications will respond appropriate medical response.

- Boles Communication contacts:
 - Medical Unit
 - Safety
 - Logistics
 - Operations
 - Crew Supervisor
 - Comps/Claims

DEMOB

BOLES INCIDENT
CA – SKU – 007064

- In order to be deemed excess, supervisors must submit an ICS #213 to the Resources Unit.
- Resources report to Demob at the times posted on the tentative Demob list, which is posted around the Incident Base.
- Prior to reporting to Demob, Please return all supplies and equipment.
- Resources will get signatures from the following units:
 - Motels
 - Supply
 - Ground Support
 - Training (If they have a trainee)
 - Communications
 - Documentation
 - Time
 - Demob

Archaeological and Historical Sites Fireline Guidance for the Boles Incident

Do not compromise safety for the protection and preservation of archaeological and historical sites. When feasible and prudent:

1. Be on the lookout for prehistoric and historic sites. Prehistoric archaeological sites include temporary camps containing scatters of obsidian and/or chert flakes that often look like broken glass. More permanent village sites containing circular depressions (house pits), artifact scatters, and dark brown-black soils (midden). These typically occur on flats near sources of water, along ridgetops and saddles, and other such places suitable for camping. Historic sites include old wooden buildings, structures and corrals, rock foundations, wells, and debris scatters. These kinds of resources can be found in the same kinds of environmental settings as prehistoric camp sites.
2. No archaeological or historical sites have yet been flagged. If you observe artifacts, features, or sites, attempt to avoid dozing or driving through and/or parking on these sites, if feasible, especially with heavy equipment.
3. If you can't avoid sites, minimize disturbance as much as feasible, only clearing the surface to as minimal a depth and width as necessary.
4. Leave all artifacts in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
5. When a site is discovered, flag it for visibility and report its location to the Division Supervisor. If feasible, note locations of discovered resources on a map. Better yet, take a GPS reading. Leave information with the Plans Section so that the sites can be relocated and protected during both the suppression and fire suppression repair phases of the Incident.
6. If you encounter a burial or other human remains, cease work in that area immediately and contact the CAL FIRE Archaeologist. State law requires that CAL FIRE then contact the County Coroner, who will then determine if the remains are part of a crime scene. If the Coroner determines that the remains are Native American, State law requires the Coroner to contact the Native American Heritage Commission in Sacramento.

TRAINING SPECIALIST MESSAGE

A Training Specialist is now on the incident.

All assigned trainees

working on position task books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment.

**The Training Specialist is available immediately following the morning Operations Briefing to
18:00**

Chris Barden

Training Specialist

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
