FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 012	TYPE OF FIRE: Wildfire
FIRE NAME: ROCKY / JERUSALEM	OPERATIONAL PERIOD: 08/12/15 0700-0700
DATE ISSUED: August 11, 2015	TIME ISSUED: 20:00
UNIT: CA-LNU-006984Rocky CA-LNU-007410Jerusalem	SIGNED: Typed/printed: Jeff Shelton (FBTS/LTAN) Steve Volmer (FBAN-T)

INPUTS

WEATHER SUMMARY: ****Moderately UNSTABLE weather conditions exist TODAY****

High clouds and slightly cooler conditions will be present. Winds will gusty and variable throughout the day. Expect wind shifts to occur during the afternoon and aid in clearing out the smoke haze from the fire, but also contribute to fire spread through drainages that are in alignment with wind conditions.

Max. Temperatures: 84 - 89 degrees (up 5) **Min. Humidity:** 18 - 23% (down 2)

Winds(Eye Level)- Morning: Light from the East 1-3 mph till noon

Afternoon: South/Southeast 4-7 mph then shifting West/Southwest until 1600,

Evening: West/Southwest 8-14 mph with gusts to 20 mph, gusts to 25 mph on ridge tops until 2200.

NIGHT: West/Southwest 3-7 mph, gusts to 12 on the ridgetops.

OUTPUTS

FIRE BEHAVIOR

GENERAL: *** Burning Index and Spread Component are just under the 90th percentile***

- Watch weather trends throughout the day. Fire behavior has responded predictably with: **RH** (below 30%), **Temperature** (above 85 Degrees), and **Wind Speed** (above 5 mph at Eye Level)
- Fire spread and intensity due to fuel conditions are aiding in Plume Domination, and wind intensity.
- Eticuera and Foley Creek, South of Knoxville, will be in full alignment with wind and fire spread directions after 1200.
- Fire intensity will build quickly once established in the brush fields, on the Southern aspects.

SPECIFIC:

All Divisions: Spot fires, isolated flare-ups, and New Starts in the area.....

Flame Lengths- Up to 10 ft. in Grass, Up to 20 ft. in Brush, Up to 50 ft. from the tops of torching trees.

Rate of Spread- Up to 100 feet/minute in Grass, Up to 150 feet/minute in Brush.

Spotting Distances- Up to .4 miles in Grass/Brush, Up to .3 miles from Torching Trees.

Probability of Ignition- Unshaded Fuels **90%** during the peak afternoon heating.

AIR OPERATIONS:

Limited cloud cover and moderately unstable conditions will contribute to plume growth levels to 15,000 AGL. Mixing heights will again rise to 5,000 AGL during peak daytime heating. Expect turbulence to increase, and winds to shift in the afternoon. Transport winds 10,000 AGL will be from the South-Southwest 30 mph.

Sunrise- 6:21 **Sunset-** 8:11

SAFETY

Identify TRIGGER POINTS and areas of ALIGNMENT early in the shift.

SAFETY ZONE size is dictated on the size and type of surrounding fuel.

ROCKY and JERUSALEM FIRE SAFETY and HEALTH MESSAGE

We Are ALL accountable for SAFE behaviors

INCIDENT: Rocky and Jerusalem Fire **DATE:** August 12, 2015 **TIME:** 0700-0700

Major Hazards and Risks: Limited Resources, Drought Stricken Fuels, Fatigue, Narrow Roads, Terrain.

Fire Behavior: Fuels are drought stricken and are receptive to fire spread. As the weather pattern changes and begins to dry be alert to changes in fire behavior. Don't let the light rain make you complacent.

Maintain Situational Awareness – Conditions and fire behavior can change rapidly. Use P.A.C.E. (Primary, Alternative, Contingent, and Emergency) planning.

Drive Slow: Always drive defensively.

Manage yourself and those around you for excessive fatigue; many have driven long distances or been deployed for extended periods. Use the buddy system and take breaks as needed. As fatigue increase, injuries tend to increase also. Maintain situational awareness.

Hazard trees: Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow **Hazard Tree Safety**, pg. 22-23 in your IRPG.

Eat and drink fluids on a regular basis to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations.

Watch out for old abandoned mines: If you find one flag it and get GPS coordinates.

Review your ICS 206 and know what to do in the event of a medical emergency.

Lookouts, Communication, Escape routes, Safety zones

Command/Leadership responsibilities when changing tactics:

- **Communicate the changes to:**
 - Subordinates,
 - Adjacent forces, and
 - Up the chain of command.
- **Account for all your people**
- **Make sure everyone knows and follows the new plan.**

Trigger Points
Should be based on measurable factors:

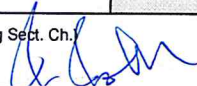

- **RH**
- **Winds**
- **Fire Behavior**
- **Topographical boundaries**
- **Time constraints/Time of day**
- **Time /distance to safety zones**
- **Loss of suppression resources**
- **Fatigue, loss of Lookouts, or Communications.**

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

PUBLIC INFORMATION SECTION

Incident Public Information Line: (707) 967-4207

Incident Media Line: (916) 591-9008

MEDIA - The California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot, or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specified within the code. However, this does not include crime scenes, and does not imply that the news media may interfere with incident operations while they are in the areas of concern. If entering such a location that is hazardous, they should be advised; media access cannot be prevented for safety reasons unless their presence would impede CAL FIRE's mitigation of the incident or the disturbing of evidence.

- Nor is the Media permitted on private property without the property owners permission.
- If approached and questioned by the media and or the public, talk about your assignment or task at hand. If need be direct the questioning party to the incident PIO.
- Do not speculate or give opinions
- There is no such thing as an "off the record" comment.

CAL FIRE SOCIAL MEDIA POLICY, Social Media 0691 – Social Media is increasingly being used by public agencies, the media as well as the public. This form of communication continues to grow rapidly in order to supply the instant gratification needs of society. Therefore when on a CAL FIRE incident you will adhere to the CAL FIRE Social Media Policy, 0691. You can get further information about the CAL FIRE Social Media Policy from the Information Section.

There will be no posting of:

- Inappropriate information or materials
- No opinions
- No endorsements
- Do not post inappropriate pictures or videos
- If you are uncertain, question.

PICTURES AND VIDEO OF INCIDENT – We are in a new era of media. Media no longer means the news/broadcast industry but now refers to anyone that has the capability to shoot video and or photographs and post them onto social media in a matter of minutes. Unfortunately we have seen some instances of video or photographs that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could have unwanted effects. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera can't be looking up, down and all around.

LOST AND FOUND – The Information Section will manage Lost and Found Items for the incident. If you have lost an item leave your contact information and what you have lost at the Information Section. If you have found an item on the incident bring the item to the Information Section with your contact information as well.

MAIL SERVICE – The Information Section will assist you in getting items mailed from the incident as well as receiving items whether it is letters or packages.

FIRE SUPPRESSION REPAIR PLAN: ROCKY INCIDENT

Fire suppression repair is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas that happened as a result of the fire itself.

Damaged facilities will be upgraded to their pre-fire condition. Projects too large or complex to be completed by the Fire Suppression Repair Group shall be transferred to the Comp/Claims Unit or the local Unit. Repair work shall only occur in locations authorized by the Operations division and where fire suppression activities are complete. Fire Suppression Repair Group resources shall evaluate all Divisions for appropriate repair needs. This includes areas inside and outside the fire perimeter, provided the damage was caused by official fire suppression activities.

Examples of items that may be repaired include, but are not limited to:

Infrastructure Damage	Natural Resource Damage
Fences and gates	Soil erosion
Culverts, bridges, and other watercourse crossings	Adverse impacts to air and water quality
Water sources	Adverse impacts to protected species of plants and animals
Utility distribution lines (above or below ground)	
Road barriers removed for fire access	
Trash, debris, and supplies left by fire suppression resources	
Miscellaneous damage to residential property	

Dozer Line Repair

Dozers construct both fire and contingency lines. Dozer line width varies greatly. The following measures shall be implemented for constructed dozer line:

- Berms and push-piles shall be spread out to the extent feasible. This may be accomplished by back-blading and/or using ripper shanks or grapples. Debris piled against trees or perched above watercourses is especially important to remove or disperse.
- Waterbreaks shall be constructed at an approximately 45 degree angle and shall be a minimum depth of 12 inches from the bottom of the cut to the top of the berm. Where feasible, the discharge from waterbreaks shall be directed into vegetated areas.
- Where slopes exceed the range at which a tractor can effectively work, waterbreaks shall be constructed with hand tools.
- Roads used in fire suppression activities shall be left in the same condition they were found or better. Gravel and soil-surfaced roads shall be watered to prevent excessive dust. Where fire suppression activities have damaged or rendered road drainage facilities non-functional, waterbreaks or drivable drainage dips shall be installed for drainage.
- Where fire suppression activities have filled in or damaged inside ditches, the ditches shall be cleaned and left unobstructed.
- Vehicle access to dozer line on Bureau of Land Management lands shall be blocked using tank traps or other similar methods.
- Spacing of waterbreaks shall be as follows:

Prevailing gradient	Maximum waterbreak spacing
0-10%	200 feet
11-25%	150 feet
26-50%	100 feet
>50%	75 feet

Spacing criteria is a general guide. Actual location of waterbreaks should be tailored to the topography and placement suited to the best dispersal of water flow.

**Archaeological and Historic Properties:
General Fire-line Guidance for the BLM Ukiah Field Office.**

**Do not compromise safety for the protection and preservation of archaeological and historic properties.
When possible and prudent:**

1. Be on the lookout for prehistoric and historic archaeological sites. These sites typically occur adjacent to streams and springs, confluences are often especially sensitive. However, sites can occur in other areas too. The most common indicators of prehistoric sites in this area (North Coast Ranges) are scatters of shiny black obsidian flakes from tool making activities and dark midden soils. Historic-era sites include homesteads that contain foundations, rock chimneys, and stone / brick-lined wells. Historic-era mining sites are possible as well.
2. Note, that much of the area has never been surveyed for archaeological resources and many sites out there have yet to be discovered.
3. If you observe archaeological resources, flagged or unflagged, attempt to avoid with ground disturbing activities altogether.
4. If avoidance is not possible, minimize ground disturbance. Use a hand crew rather than a dozer to remove fuels from control lines that must cross site areas if possible.
5. Leave all artifacts in place as some may have been intentionally placed for religious or ceremonial reasons.
6. Note locations of discovered resources on a map, better yet, take site coordinates with a GPS. Leave information for the archaeologist so that the sites can be relocated and protected during Fire Suppression Repair. Flag the site in red if possible.
7. If you encounter a burial or other human remains, cease work in that area and contact the archaeologist immediately.

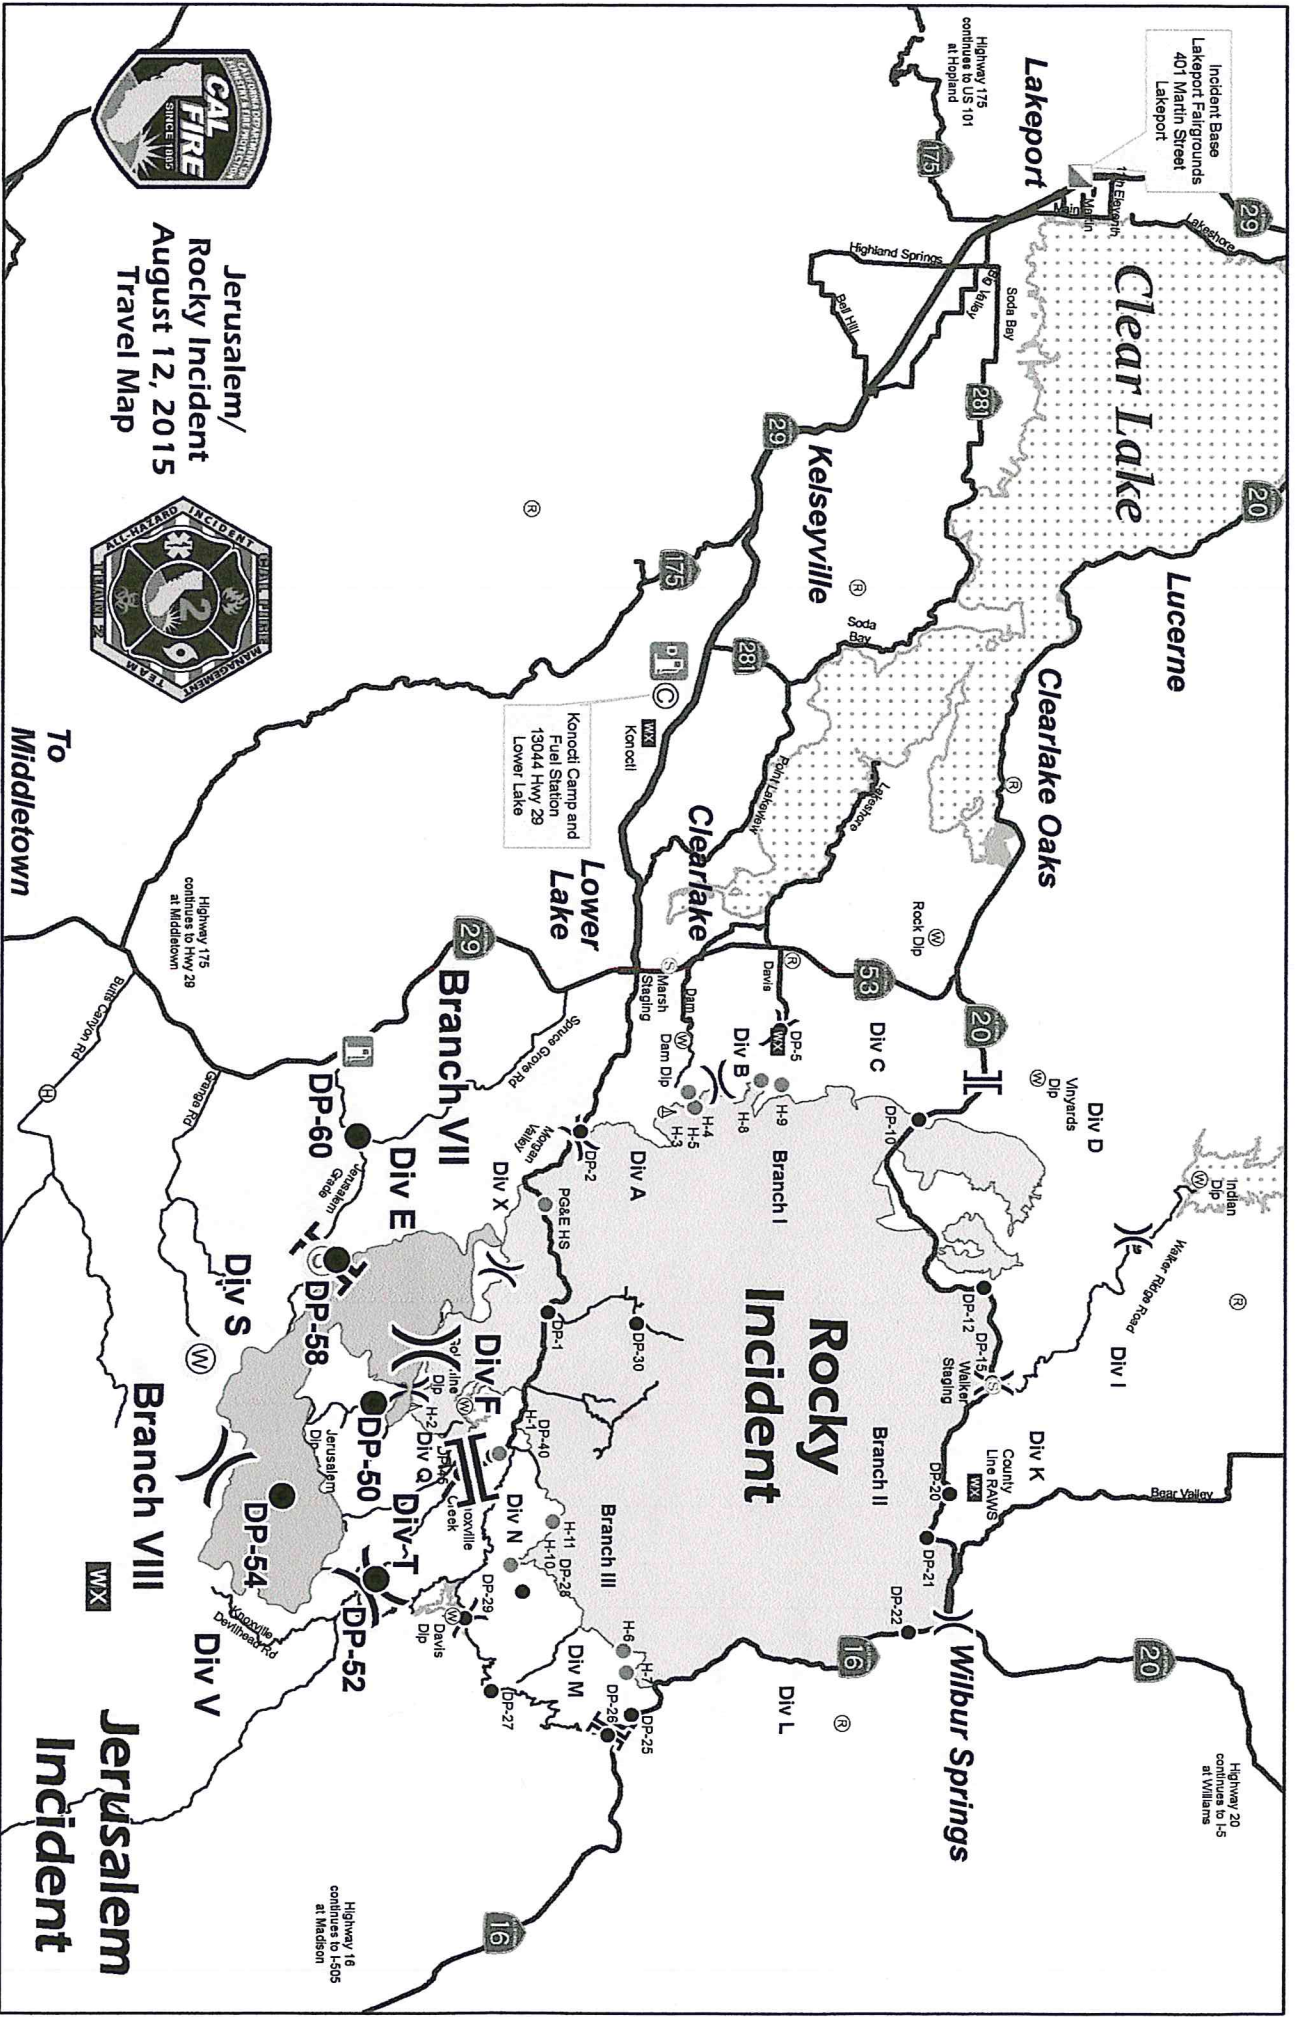

Your help preserving California's non-renewable cultural resources is appreciated.
