## OUTPUTS

### FIRE BEHAVIOR

#### GENERAL:

- Fuels within the ENTIRE burn area are drought stressed with a very heavy dead to live component.
- Very heavy fuel loading due to lack of fire history in area.
- Marine layer will have little to no effect on the fire due to higher elevation of the fire

#### SPECIFIC:

#### All Divisions:

Flame Lengths- Head fire: 7-27 ft. in Grass/Brush, 7-10 ft. in Timber Litter/Understory,  
Flanking fire: 3-7 ft. in Grass/Brush, 3-4 ft. in Timber Litter/Understory

Rate of Spread- Head fire up to 140 ft/min in Grass/Brush Up to 36 ft/min in Timber Litter/Understory

Spotting Distances- Up to 0.2 miles

Probability of Ignition- 88% at the peak of the burn period

#### AIR OPERATIONS:

Patchy smoke may make visibility difficult for air resources

Sunrise: 0700 Sunset: 1853

## SAFETY

- Identify Trigger Points Early in the Shift.....and Respect Them!
- Expect Areas Where Wind and Terrain Align to Produce *Surprisingly* Rapid Rates of Spread!
- Don't become complacent! Identify your safety zones and escape routes.

## LOMA HEALTH AND SAFETY MESSAGE

### We Are ALL Safety Officers !!!

**INCIDENT:** Loma Fire CA-SCU-006912      **DATE:** September 28, 2016      **TIME:** 0700-0700

**Major Hazards and Risks: Limited Resources, Extremely Dry, Cured, Drought Stricken Fuels, and Fatigue.**

**Fire Behavior:** Fuels are drought stricken and are receptive to fire spread. A small amount of wind on this dry fuel changes the game dramatically!! Be alert to changes in wind direction and expect changes in fire behavior. Flare-ups generally occur in deceptively light fuels, such as grass and light brush or islands within fire perimeters of unburned or partially burned fuels.

**Personnel:** Manage yourself and those around you for fatigue; many have driven long distances or been deployed for extended periods. As fatigue increases, injuries tend to increase also. Keep an eye on your crew and partner.

**Illegal Marijuana Growing Operations:** Maintain situational awareness and be alert for illegal marijuana growing operations. Mark location with GPS.

**Hydration:** By the time your body tells you it's time to drink – you are already DEHYDRATED!!! On a regular basis drink fluids to maintain an appropriate energy level for any expected work assignment. Remember, you are the only one that knows your limitations.

**Hazard trees:** Survey your work areas for hazard trees, flag and restrict access, use only qualified personnel for tree felling. Review and follow **Hazard Tree Safety**, pg. 22-23 in your IRPG.

**Review your ICS 206 and know what to do in the event of a medical emergency.**

**Lookouts, Communication, Escape routes, Safety zones**

#### Heat Illness Prevention:

- **Drink plenty of fluids:**
  - **Water and Gatorade**
- **Avoid drinking energy drinks**
- **Rest when you can**
- **Find shade when you can**
- **Eat nutritious food regularly**

#### Tailgate Safety

- **Accountability:** everyone checks in and everyone checks out. Supervisors know where their crews are at all times
- **Communication:** everyone knows the com-plan
- **Briefing:** everyone knows the game plan, everyone knows the contingency plan
- **Safety gear:** everyone has the appropriate safety gear and in good working condition
- **LCES:** they are clear and made known to everyone

# CAL FIRE WUI Guidelines

## STRUCTURE DEFENSE TACTICAL ACTIONS

### **CHECK AND GO**

"Check and Go" is a rapid evaluation to check for occupants requiring removal or rescue.  
Structure Triage Category – Threatened Non-Defensible

### **PREP AND GO**

"Prep and Go" implies that some preparation of the structure may be safely completed prior to resources leaving the area. Structure Triage Category – Threatened Non-Defensible

### **PREP AND DEFEND**

"Prep and Defend" is a tactic used when a Safety Zone and TRA are present and adequate time exists to safely prepare a structure for defense prior to the arrival of the fire front.  
Structure Triage Category – Threatened Defensible

### **FIRE FRONT FOLLOWING**

"Fire Front Following" is a follow up tactic employed when Check and Go, Prep and Go, or Bump and Run tactics are initially used. A tactic used to come in behind the fire front.

### **BUMP AND RUN**

"Bump and Run" is a tactic where resources typically move ahead of the fire front in the spotting zone to extinguish spot fires and hot spots, and to defend as many structures as possible.

### **ANCHOR AND HOLD**

"Anchor and Hold" is a tactic utilizing control lines and large water streams from fixed water supplies in an attempt to stop fire spread. The goal is to extinguish structure fires, protect exposures, and reduce ember production.

### **TACTICAL PATROL**

"Tactical Patrol" is a tactic where the key element is mobility and continuous monitoring of an assigned area.

## LEVELS OF ENGAGEMENT

### PACE

Implement PACE. prior to engaging in any structure protection action.

#### **P** - Primary Plan [Offense]

Is focused on fire fighter safety and mission objectives

#### **A** - Alternate Plan [Offense]

A fall back plan that closely supports the Primary Plan

#### **C** - Contingency Plan [Defense]

Focused on the firefighter's safety, move to a safety zone or temporary refuge area

#### **E** - Emergency Plan [Defense]

Firefighter survival, deployment zones, fire shelters

### **ALWAYS HAVE A DEPLOYMENT SITE IDENTIFIED!**

### DRAW-D

**D** - Defend – Holding actions, protecting priority areas, protect the structures, hold and improve the line

**R** - Reinforce – Bring more resources to bear, add resources necessary to *advance* or *defend*

**A** - Advance – Anchor and Flank, Direct or Indirect Attack, Active burnout operations

**W** - Withdraw – Cease current activities until conditions modify, Abandon an established position or constructed line in response to an increase in fire intensity, Not a stigma, but a decision to move away from a threat

**D** - Delay – Wait until the situation has modified sufficiently to allow a different level of engagement, Waiting for conditions to meet pre-identified triggers necessary to *advance* or *defend*, not a lack of effort, but a conscious decision to maximize long term effectiveness

# FIRE SUPPRESSION REPAIR

LOMA INCIDENT

CA SCU-006912

**Fire Suppression Repair is the repair of damage caused directly from fire suppression activities, it is not the repair of areas damaged by the fire. We cannot upgrade facilities beyond their pre-fire condition.**

## Start Early!

Repair work should start as soon as practical. However, repair activities shall not hamper or conflict with fire suppression actions. When possible, construct waterbars on dozer lines, hand lines, and safety zones concurrent with line construction or mop-up operations. Scattered trash shall be collected and deposited at Drop Points. Police your areas.

## Repair Site Inventory:

Report Fire Suppression Repair needs as soon as possible. The Suppression Repair Group will evaluate each site, develop a specific repair plan, and schedule an appropriate repair with necessary resources.

## Infrastructure Damage:

Report the location and type of suppression damage to infrastructure. Common examples include:

- Fences /gates
- Culvert/ Bridge/ Other watercourse crossings
- Water sources
- Utility distribution line; above/below ground.
- Restore barriers on roads previously closed but opened for suppression activities.
- Remove trash and debris, including flagging and signs when no longer needed.
- Misc. damage to residential property.

## Natural Resource Damage:

This category represents repairing problems caused by fire suppression activities (direct effect) and to prevent likely future problems such as accelerated erosion caused by winter rains (indirect effect).

- Construct drivable waterbars or rolling dips on unsurfaced roads.
- Construct waterbars on all dozer and hand lines according to the following Specifications: Water bars shall be cut diagonally into firm soil at least 6" deep and have a berm at least 12" in height. Water bar should have a 30-45 degree angle to the fall line. Outlets must be open and directed onto the least erodible material possible.

<b>Line or Road Gradient (%)</b>	<u>0-10%</u>	<u>11-25%</u>	<u>26-50%</u>	<u>&gt;50%</u>
<b>Waterbreak Spacing</b>	100'	100'	75'	50'

- Remove (or breach) all berms created by suppression activities unless necessary to divert runoff from a sensitive site.
- Remove soil and debris from culverts and drainage facilities deposited by fire suppression activities.
- All slash, soil, and debris deposited into watercourses shall be removed and stabilized as feasible.
- All work within 100 feet of a watercourse, cultural site or other sensitive location shall be performed by hand crews to avoid further damage and with guidance from the FSR Group.

## Cultural Site Damage:

Immediately report any known or suspected archaeological/historical site through chain of command to the incident Archaeologist and/or the Fireline Suppression Repair Group. This includes air tanker drops upon a site. Use least disturbing suppression methods possible unless life safety is at risk. Flag site perimeter for identification. Removing or disturbing any artifact is not permissible.

## Comp Claims Issues:

Damaged resources that are too large or complex for the Fireline Suppression Group to handle shall be turned over to Comp Claims for processing. Examples of such issues include damage to pavement, bridges, pipelines, etc.

# CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

## *California Drought Emergency*

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/owner.

### **Fireline personnel-** (During mop up operations)

- Use Pencil Hose and Garden Nozzles with Shut-Offs.
- Use Back pumps.
- Use Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely.
- Locate/Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline.

### **Road Maintenance and Repair-**

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc.).
- Consider use of tertiary or treated water.

### **Aviation Operations-**

- Consider use of Gels, Foams and Retardants. Set up portable plants.
- Consider using Blivits and Pencil Hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops.

### **Private Water Supplies-**

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, ICS-214, Water Usage Reports) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

### **Public/Municipal Water Supplies-**

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Note locations on incident map.
- Use alternative or reclaimed water sources when available. Note locations on incident map.
- Make arrangements for reimbursement and damage claims if needed.

### **Management and Supervision-**

- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance.
- Review this check list and brief daily.
