

Incident Status Summary (ICS-209)

Incident: Spillway - DWR Assist

1. Incident Name: Spillway - DWR Assist		2. Incident Number: CA-CDF-000114	
3. Report Version (check one box): Initial <input checked="" type="checkbox"/> Update Final	4. Incident Commander(s) & Agency or Organization: Lawson/Whitlock/Honea	5. Incident Management Organization: Type 1 Team <input checked="" type="checkbox"/> Unified Command	6. Incident Start Date/Time: Date: 02/07/2017 Time: 1400 PST
7. Current Incident Size or Area Involved (use unit label – e.g., “Acres”, “Square Miles”): 4002 Acres	8a. Percent (%) Contained or Completed: 0 %	9. Incident Type: Other B. Incident Description: Oroville Dam compromised spillway C. Cause: Unknown D. Fire Suppression Strategy:	10. Incident Complexity Level: <input checked="" type="checkbox"/> Single <input type="checkbox"/> Complex CALFIRE Incident Management Team 3 assigned in Unified Command with Department of Water Resources and Butte County Sheriff's Office.
	8b. Total Percentage (%) of Perimeter that will be Contained or Completed: 0 %		
12. Prepared By: Print Name: Alan M. Uchida - SITL Date/Time Prepared: 02/21/2017 1730 PST		13. Approved By: Print Name: Barry Biermann - IC Signature: 	
14. Date/Time Submitted: 02/21/2017 1744 PST		15. Primary Location, Organization, or Agency Sent To: California Department of Forestry/CALFIRE	
16. State: CA	17. County / Parish / Borough: Butte	18. City: Oroville	
19. Unit or Other: Oroville Field Division	20. Incident Jurisdiction: DWR	21. Incident Location Ownership (if different than jurisdiction):	
22. Latitude/Longitude: Latitude: 39° 32' 22" Longitude: 121° 29' 49"	23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Mt. Diablo Township: 19N Range: 4E Section: 2 1/4 Sec: of 1/4 Sec: NW	
25. Short Location or Area Description (list all affected areas or a reference point): Oroville Dam Spillway, Feather River and Thermalito diversion pool.			26. UTM Coordinates: Zone: 10 Easting: 629160

Incident Status Summary (ICS-209)

Incident: Spillway - DWR Assist

Northing: 4377732

27. Note any geospatial data available (indicate data format, content, and collection time information and labels):

28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents):

Narrative:

Flood control spillway outlet flows of 60,000 cfs at 1600 hours will continue because of increased inflow over the last couple of days. At the Hyatt Power Plant, tailrace elevation has maintained WSE around 254.23 ft. at 1600 hours due to the steady outlet flows. Lake level was 852.45 ft., with freeboard below the emergency spillway crest at approximately 48.45 ft. at 1600 hours.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

Narrative:

Water, concrete, soil/dirt, trees, and debris are the main hazards to the spillways and downstream infrastructure.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

The power plant, if severely damaged, has the potential to create significant human, cultural, environmental, and economic impacts. Work is being done to reinforce the emergency spillway from erosion damage. Cracks were reported on the upper access road above the plunge pool, indicating continued erosion to the left side of the flood control spillway. Large rock and debris are still lodged in the dentates. The Feather River Fish Hatchery moved most aquatic assets to safe areas.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

<p>33. Life, Safety, and Health Status/Threat Remarks: Stabilization work on areas below the emergency spillway affected by the uncontrolled release continues. DWR staff continues to discharge water through the flood control spillway, causing erosion to the hillside as expected. The maximum recorded lake elevation was 852.45 ft. at 1600 hours. Potential future threat continues for the Hyatt Power Plant as flood control spillway flows increased to 60,000 cfs at 1600 hours on 02/19/2017. Disruption of the Hyatt Power Plant could have significant implications to human, cultural, legal, and economic factors. Among the many impacts, the loss of drinking water is the most pertinent. Contingency planning is under way with OES and DWR Flood Center for potential water level increases below the Thermalito Diversion Dam. On 02/13/2017, California State Parks closed all units and trails of the Lake Oroville SRA except for the Visitor Center, North Forebay and South Forebay. The park was closed for safety due to the condition of the emergency spillway, flood control spillway chute, and construction in the area. California State Parks issued a News Release on 02/21/2017 "Effective 8 a.m. this Thursday, 02/23/2017 Lake Oroville SRA partially reopens. Areas surrounding the Thermalito Diversion Pool (Burma Day Use and Lakeland Day Use) and Spillway Launch Ramp will remain closed. This includes those portions of the Dan Beebe and Brad Freeman trails leading from the SRA's Visitor Center to the City of Oroville".</p> <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): A Flood Warning is in effect for the general area through Thursday.</p> <p>Tuesday Mostly cloudy with isolated showers over the Basin today and most activity remaining southward of Butte County. Lightning was a potential threat near the Dam today, but storms failed to develop any lightning strikes within 30 miles. Breezy SSE surface wind gusts to 15-20 mph.</p> <p>Tuesday Night Mostly cloudy with isolated weak showers and rainfall amounts less than 0.20 inches. Expect ESE winds 5-9 mph tonight gusting to 15 mph toward sunrise.</p> <p>Wednesday Partly to mostly cloudy with isolated light showers over the Basin and little accumulation. Snow levels will lower to around 3500 ft today. Afternoon SSE</p>	<p>34. Incident Status Summary (ICS-209)

Incident: Spillway - DWR Assist

surface wind gusts to 15.	
---------------------------	--

36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:

12 hours:	Flood control spillway outlet flows of 60,000 cfs at 1600 hours will continue to accommodate the increased inflows over the last couple of days. Lake levels are at 852.45 ft. at 1600 hours, with flows through the flood control spillway maintaining at 60,000 cfs. Crews will continue repairs to emergency spillway by placing rock and concrete on erosion areas, mitigating impacts from erosion. Hyatt Power Plant personnel will continue ongoing efforts to remove water from the base of the plant. Work on the emergency spillway and Hyatt Power Plant will continue to run 24 hours a day.
24 hours:	With lake levels projected to increase slightly in the next couple of days, flows through the flood control spillway will be maintained at 60,000 cfs. Crews will continue repairs to emergency spillway by placing rock and concrete on erosion areas, mitigating impacts from erosion. Hyatt Power Plant personnel will continue ongoing efforts to remove water from the base of the plant. Work on the emergency spillway and Hyatt Power Plant will continue to run 24 hours a day. PG&E and DWR crews will be installing high voltage power lines in the area adjacent to the flood control spillway.
48 hours:	With lake levels projected to increase slightly in the next couple of days, flows through the flood control spillway will be maintained at 60,000 cfs. Crews will continue repairs to emergency spillway by placing rock and concrete on erosion areas, mitigating impacts from erosion. Hyatt Power Plant personnel will continue ongoing efforts to remove water from the base of the plant. Work on the emergency spillway and Hyatt Power Plant will continue to run 24 hours a day. PG&E and DWR crews will continue installing high voltage power lines in the area adjacent to the flood control spillway.
72 hours:	With lake levels projected to increase slightly in the next couple of days, flows through the flood control spillway will be maintained at 60,000 cfs. Crews will continue repairs to emergency spillway by placing rock and concrete on erosion areas, mitigating impacts from erosion. Hyatt Power Plant personnel will continue ongoing efforts to remove water from the base of the plant. Work on the emergency spillway and Hyatt Power Plant will continue to run 24 hours a day. PG&E and DWR crews will continue installing high voltage power lines in the area adjacent to the flood control spillway.

Anticipated after 72 hours: TBD

37. Strategic Objectives (define planned end-state for incident):

Work on areas below the emergency spillway, the monoliths, access roads and the various gullies created during the emergency spillway runoff continues. Multiple crews will be dredging both upstream and downstream from the toe of the flood control spillway to reduce backflow in Hyatt Power Plant. Hyatt Power Plant crews remain active 24 hours a day in preventing the impacts of high water in the tailrace and are employing mitigation measures of water in the power plant. O&M crews continue to remove debris from Thermalito Diversion Dam and power canal.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

12 hours:	Lake levels rose slightly to 852.45 ft. approximately 48.45 ft. below the flood control spillway height at 901 ft. No DWR drone photos or video were submitted today. Data from Engineering and imagery ensure proper implementation of the Emergency Spillway Erosion Plan. The Plan depicts predetermined repair priorities identified by need. Every effort is being made to have repairs completed if the emergency spillway were to overtop again. The top of the flood control spillway is at 817 ft. The flow was maintained at 60,000 cfs today. The two downhill roads from the emergency spillway have been significantly eroded with one being washed out. Due
-----------	---

Incident Status Summary (ICS-209)

Incident: Spillway - DWR Assist

<p>to the continued erosion to the flood control spillway, monitoring continues by DWR geology/engineering department. The tailrace elevation has increased slightly to 254.23 ft. by 1600 hours., just above the desired 252 ft. at the Hyatt Power Plant. Barges and cranes are being mobilized to remove debris in the tailrace. Power plant flooding is being mitigated by sandbagging and pumps placed around stoplog slots. Pumping operations continue to be successful within the power plant. Uprooted trees remain lodged in the Thermalito Diversion Dam but does not appear to affect flows. Contractors are assessing how to remove blockage, which has been difficult due to weight limitations of Thermalito Dam crossing. The Feather River Hatchery staff reports show that turbidity levels are down considering the sediment flow and fish are healthy and feeding. The Hatchery has lost power but running on a standalone generator. The intake and supply lines to the hatchery are not working to capacity, possibly due to sediment. 1 million Endangered Steelhead trout eggs, still in hatchery pools, are being supplemented with de-chlorinated hydrant water in a closed loop system since they can't be moved safely. 2 million endangered spring run Chinook Salmon and 3 million fall run Chinook salmon were moved to the Thermalito Annex facility away from the river. Fish will be tagged at the Annex facility. 3 million out of 6 million fall run Chinook salmon remain at the hatchery due to the annex being at capacity. If conditions worsen or turbidity levels rise, a decision will be made to release the 3 million remaining Chinook salmon into the river to increase chances for survival. Hatchery staff, pathologists and veterinarians continue to remain on site to monitor fish health. California State Parks is working with local cultural groups that potentially were affected by using the emergency spillway and update them on current conditions. There were several cultural impacts identified that could be affected, consultation is being done and plans designed to minimize impacts and potential damage are in place. California State Parks issued a News Release on 02/21/2017 "Effective 8 a.m. this Thursday, 02/23/2017 Lake Oroville SRA partially reopens. Areas surrounding the Thermalito Diversion Pool (Burma Day Use and Lakeland Day Use) and Spillway Launch Ramp will remain closed. This includes those portions of the Dan Beebe and Brad Freeman trails leading from the SRA's Visitor Center to the City of Oroville". Ranger staff are providing roving patrols due to large number of contacts in the closed area. Impacts to the park include soil erosion, water turbidity downstream, and tree and vegetation removal.</p>
<p>24 hours: Same as above.</p>
<p>48 hours: Same as above.</p>
<p>72 hours: Same as above.</p>
<p>Anticipated after 72 hours: Same as above.</p>
<p>39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:</p>
<p>12 hours: N/A</p>
<p>24 hours: N/A</p>
<p>48 hours: N/A</p>
<p>72 hours: N/A</p>
<p>Anticipated after 72 hours: N/A</p>
<p>40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:</p> <ol style="list-style-type: none"> 1) critical resource needs identified above, 2) the Incident Action Plan and management objectives and targets, 3) anticipated results. <p>Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.</p> <p>DWR construction crews will continue work to remediate the emergency spillway erosion. Crews continue to prevent major flooding of the Hyatt Power Plant through sandbagging and water removal. Maintaining operational integrity of the Hyatt Power Plant, which serves drinking water to a significant population in California, farmers throughout the valley, and</p>

Incident Status Summary (ICS-209)

Incident: Spillway - DWR Assist

sustains ecological resources, remains a key priority of DWR. Despite flows of 60,000 cfs, mitigation efforts on the debris pile at the toe of the flood control spillway continue.

41. Planned Actions for Next Operational Period:

Flood control spillway operations to continue at 60,000 cfs depending on amount of erosion observed and lake levels. Maintain Hyatt Power Plant integrity. Clear debris at Thermalito Diversion Dam. Continue to push access roads downstream on the left side of diversion pool. Contractor continues using a crane to construct the barge by the Thermalito Diversion Dam Boat Launch. The barges, boats, and excavators will be used to dredge the debris pile at the toe of the flood control spillway.

42. Projected Final Incident Size/Area (use unit label – e.g., “Acres”, “Square Miles”):

43. Anticipated Incident Containment or Completion Date: 02/28/2017

44. Projected Significant Resource Demobilization Start Date: 02/22/2017

45. Estimated Incident Costs to Date: \$30,000,000.00

46. Projected Final Incident Cost Estimate:

47. Remarks (or continuation of any blocks above – list block number in notation):

49. Resources (summarize resources by category, kind, and/or type; show # of resources on top ½ of box, show # of personnel associated with resource on bottom ½ of box):
