Mendocino Lake Incident Weather Forecast

FORECAST NO:	9 D/N	NAME OF FIRE:	Mendocino Lake
PREDICTION FOR:	Thursday - 24 Hour Shift	UNIT:	CA Fire - MEU
SHIFT DATE:	Oct 19, 2017	Incident Meteorologist:	Jeff Tonkin
FORECAST ISSUED:	1700 Oct 18, 2017		

WEATHER DISCUSSION:

Significant pattern change today as a moderately strong fall Pacific Storm crosses the region. Light rain or sprinkles are possible during the morning hours accompanied by high relative humidity values. Widespread steady rain will begin around 1600 PDT with total rain amounts of 0.35 to 0.45 inches by Friday morning. High pressure returns on Saturday bringing a very gradual warming and drying trend back to the fire area for next week.

Today (Thursday)

WEATHER: Cloudy and Cool with light rain or sprinkles possible the first half the day. Widespread steady rain beginning around 1600 PDT. (0.35 – 0.45 inches total)

MAX TEMPERATURES: 60 to 64.

MIN HUMIDITY 2000 ft: 65 - 70% rising to 100% by late afternoon.

WINDS (EYE LEVEL):

2500 FT: South and Southwest wind 5 to 8 mph...Gusts 15 to 20 mph in the afternoon.

LAL: 1 CWR: 100%

STABILITY / INVERSION: Moderately unstable.

SMOKE TRANSPORT WIND: SW 30 mph.

Tonight (Thursday Night) :

WEATHER: Rain.

MIN TEMPERATURES: 47 to 53.

HUMIDITY: 100%.

WINDS (EYE LEVEL):

Gusty south and Southwest wind 6 to 12 mph...gusts to 20 mph...winds diminishing after midnight.

Friday:

WEATHER: Mostly cloudy with scattered light showers.

MAX TEMPS: 58 to 63.

MIN RH: 60 to 70%.

WIND:

SMOKE TRANSPORT: SW 25 mph.

CWR: 25%.

Saturday through Sunday:

A ridge of high pressure will gradually build aloft over the weekend but the low level airmass will remain very moist. Warmest temps and driest days look to occur during the middle of next week.

For Saturday and Sunday: Max Temps...65 – 75. Min RH...45 - 50%. Wind: West 3 to 6 mph with afternoon gusts to 12 mph. Smoke Transport Wind: NW 20 mph. LAL: 1 CWR: 0 %.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 9	TYPE OF FIRE: WILDFIRE
FIRE NAME: MENDOCINO LAKE COMPLEX	OPERATIONAL PERIOD: OCT 19-24 HR
DATE ISSUED: OCT 18, 2017	TIME ISSUED: 1900
UNIT: CALFIRE MENDOCINO UNIT	SIGNED: 
	Typed/printed: TIM CHAVEZ

INPUTS

WEATHER SUMMARY: APPROACHING TROF WILL RAISE HUMIDITY AND CAUSE RAIN OVER THE FIRE. SEE IMET FORECAST
FUELS: GRASS, BRUSH AND LITTER UNDER OAKS AND TIMBER ARE THE PRIMARY CARRIERS OF THE FIRE. LAST RAINFALL GREATER THAN 0.25" WAS APRIL 20, 2017. WET WEATHER COMING IN THE NEXT 24 HOURS, BUT AFTER THAT A RIDGE BUILDS BACK IN AND DRYNESS WILL RESUME. MANZANITA AND CHAMISE LIVE FUEL MOISTURES HAVE BEEN BELOW CRITICAL SINCE MID AUGUST.

OUTPUTS

FIRE BEHAVIOR

GENERAL: PROBABILITY OF IGNITION 16% MID-DAY, SPOTTING DISTANCE POTENTIALLY 0.1-0.2 MI. ENERGY RELEASE COMPONENT FOR THE AREA WILL BE FALLING FOR THE FIRST TIME IN WEEKS. AVG FOR THIS TIME OF YEAR IS 45, ERC NOW AT 53.

SPECIFIC:

BRANCH I AND III (SULFUR) V AND VI AND VII (REDWOOD)

NO MOVEMENT ANTICIPATED.

BRANCH IV

AS THE COLD FRONT APPROACHES, THE WINDS WILL BRIEFLY INCREASE AND TURN SOUTHERLY AND SOUTHWESTERLY. THIS BRIEF PERIOD WILL PRESENT THE MOST RISK OF A WIND CAUSED SPOT WE HAVE HAD FOR SEVERAL DAYS. HOWEVER, THE PIG IS VERY LOW. REMAIN WATCHFUL IN THE DIV J-M-O AREAS.

AIR OPERATIONS:

VISIBILITY DECREASING THROUGH THE OPERATIONAL PERIOD DUE TO MOISTURE.

SAFETY

- **WIND INCREASE MAY CAUSE FIRE WEAKENED GREEN AND BURNED TREES AND BRANCHES TO FALL.**
- **SNAGS STILL BURNING UP HIGH WILL BECOME ACTIVE SOURCE OF FIREBRANDS.**
- **RAIN MAY CAUSE RETARDANT COATED PAVEMENT TO BECOME SLIPPERY.**
-

Chainsaw Felling Accidents

IDENTIFY HAZARDS / WORK WITHIN QUALIFICATION / CONSIDER ALTERNATIVES

- Tree hang-ups account for 25% of felling fatalities. When a tree you are working on becomes a hang-up, reconsider the risks to personnel safety and consider alternatives.
- Are you qualified and comfortable with felling assignment?
- All sawyers have the authority to decline a felling assignment if they feel it is unsafe. Or if the assignment exceeds their training, qualification or experience.
- Consider alternatives to felling hazard trees.
 - Use heavy equipment to remove the hazard.
 - Restrict access.
 - Make notifications and utilize signs/flagging to communicate the hazard.
- Bucking operations can also be hazardous. Alternatives can also be used for bucking operations (e.g. use mitigation measures to restrict access, use heavy equipment, decline assignment if there are no mitigations).

TRAFFIC SAFETY

SLOW DOWN

Excessive speed has contributed to numerous accidents and near serious accidents on the Mendocino Lake Complex.

Take The Time to Make Your Workspace Safe

- Use Warning Devices: All emergency vehicles will use advance warning devices to alert oncoming and opposing traffic.
- Wear High Visibility PPE: Consider the potential for media and civilians in vehicles accessing or egressing the fire area and the impact of smoke, dust and fog on the visibility of fire personnel.
- Give Yourself Space: Allow for a buffer between the point where the traffic is diverted and the actual incident scene.

STEEP TERRAIN

Watch Out

- Rolling logs, rolling rocks
- Poor footing
- Be aware of dozers and other equipment working above you

Mitigation

- Read and understand the Medical Emergency Procedures on the Medical Plan (ICS 206)
- Reduce the number of personnel on a steep slope to the minimum required to complete the mission.
- Assess whether missions on a steep slopes are necessary to meet Incident objectives.

MEDICAL EMERGENCY PROCEDURES

EMERGENCY FREQUENCY: CALCORD
LINE EMERGENCY:
 Crew Supervisor will contact the Incident Commander with patient complaint/condition and location.

- Incident Commander Contacts:
 1. ECC (Saint Helena)
 2. Request any additional resources and /or equipment needed.

- Emergency Command Center contacts:
 1. Proper agency/resource for emergency response

- Incident Commander will run medical on emergency command channel.
 1. A pre-assigned tactical frequency (i.e. CALCORD) should be used for IWI and only for duration of need.

MENDOCINO LAKE COMPLEX INFORMATION

Fire Information Line (Redwood): 707-467-6428

Fire Information Line (Sulphur): 707-967-4207

Media Line 562-619-7467

MEDIA

California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot, or civil disturbance. Properly identified members of the news media should not be restricted from entering the locations specified within the code, even if the area presents a danger to them. Media members should be advised of the nature of possible danger. Members of the media do not have the right to access crime scenes or any area where their presence may interfere with incident operations, mitigation or evidence collection.

- The media may only access private property with the property owner's permission. Fire personnel cannot provide members of the media with authorization to enter private property.
- If approached and questioned by the media and/or the public, talk about your assignment or task at hand. If need be, direct the questioning party to the incident PIO.
- Do not speculate or give opinions
- There is no such thing as an "off the record" comment.

CAL FIRE SOCIAL MEDIA POLICY (Social Media 0691)

Social Media is increasingly being used by public agencies and the media as well as the public. This form of communication continues to grow rapidly in order to supply the public's desire for instant information gratification. All personnel assigned to a CAL FIRE incident will adhere to the CAL FIRE Social Media Policy. Further information about the CAL FIRE Social Media Policy can be obtained from the Information Officer. If you are uncertain, please ask. **Do not post:**

- Inappropriate information, pictures or videos
- Opinions regarding the incident or policy
- Endorsements of any kind

PICTURES AND VIDEO OF INCIDENT

We are in a new era of media. Media no longer means the news/broadcast industry but now refers to anyone that has the capability to shoot video and or photographs and post them onto social media in a matter of minutes. Unfortunately we have seen some instances of video or photographs that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could have unwanted effects. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera can't be looking up, down and all around.

LOST AND FOUND

The Information staff will manage *Lost and Found* items for the incident. If you have lost an item, leave your contact information and what you have lost at the Information trailer. If you have found an item on the incident, bring the item to the Information trailer.

MAIL SERVICE

The Information staff will assist you in receiving letters and packages.

**Mendocino-Lake Complex Emergency Fire Suppression Repair Plan
Incident # CA MEU 012169 (REDWOOD)
CA MEU 10055 (SULPHUR)
10/18/2017 0700 hrs.**

Charlie Martin- Suppression Repair Technical Specialist

Reviewed & approved by Plans.:  _____

The Redwood Complex and Sulphur Fire started on 10/8/17 and were two of several fires in the Mendocino, Lake, Sonoma and Napa Counties of CAL FIRE Region 1 that started that evening. The Redwood Complex is approximately 35,000 acres in size and the Sulphur Fire 2,500 acres.

Authority: Public Resources Code Sections 4675 and 4676 enables CAL FIRE to repair any fire suppression impacts on State Responsibility Area Land.

I. Objectives

The objective of the Suppression Repair Plan is to mitigate possible adverse effects to resources resulting from fire suppression activities on the Mendocino-Lake Complex Fires, in a manner which does not compromise firefighter safety. The mitigations described within this plan have been developed to apply to constructed fire lines, watercourse crossings, access roads, water sources, drop points, heli-spots and any other locations disturbed by fire suppression activities. A Repair Specialist or appropriate monitor will be assigned to ensure that work is done as required and according to the Emergency Fire Suppression Repair Plan. Additional specialists or equipment may be used if the need arises. Specialists will release equipment from the area when their work is completed.

GENERAL WORK ACROSS ALL AREAS:

- Provide drainage to dozer line and hand line to minimize erosion.
- Remove watercourse crossings to minimize sediment yields and avoid impacts to infrastructure such as downstream culverts.
- Remove trash brought in by suppression personnel.
- Restore road surfaces to a passable standard similar to prefire conditions.
- Mitigate safety hazards caused by clearing vegetation and trees.
- Repair to a functional standard, property damaged by suppression activities.
- Refer citizens to the Comp-claims department as appropriate for damages beyond the scope of field repairs.

PRIORITIES:

Damages with potential to impact public safety
Damages with potential to impact public infrastructure
Damages with potential to negatively impact the environment
Damages to property

TREATMENT STANDARDS AND EXPECTATIONS:

A. Helispots/Staging Areas/Drop Points/Safety Zones

- 1) Re-contour to the original slope as requested by the Repair Specialist or monitor.
- 2) Remove soil, and/or breach berms so that runoff can be dissipated. Cross drain these areas to effectively dissipate water runoff.
- 3) Break apart piles of disturbed vegetation, brush and trees, piled during line construction to the extent necessary to mitigate hazards. This may be done with equipment or hand crews.

B. Roads

- 1) Repair roads to pre-fire condition as requested by the Repair Specialist or monitor.
- 2) Re-establish existing berms and inside ditches where applicable.
- 3) Breach berms to facilitate drainage, where applicable.
- 4) Clean culverts plugged with soil and rock resulting from fire road use.
- 5) Remove all slash and debris from culvert inlets/outlets.
- 6) Blading or grading of roads may be necessary to maintain a safe driving surface and restore the road to functional condition following suppression and suppression repair work.
- 7) Break apart any concentrations of brush or trees created by suppression work to the extent necessary to minimize safety risks.
- 8) Water roads as necessary to maintain surface in a packed condition while suppression and repair work is in progress.

C. Firelines; Hand and Dozer

- 1) Install waterbars as described in the guidelines below. Waterbars are designed to intercept, slow and spread the precipitation run-off in order to reduce sediment transport and soil erosion. The idea is to move water off the fire line before it can build up enough energy to erode and transport sediment. Re-establish waterbars and rolling dips to provide adequate drainage using pre-fire locations. Where natural drainage is determined to be adequate by the Repair Specialist, waterbar installation can be minimized.

Waterbar Guidelines:

- 1) **Spacing:** These spacing distances should be used as a guide. Judgment should be used in locating waterbars to minimize erosion potential. It may not be possible or necessary to place waterbars in steep or rocky areas. Waterbars may not be necessary on all lines. Where necessary, install waterbars at the following recommended *minimum* intervals:

Fire line Gradient (% slope)	Minimum Distance Between Water- Bars (feet) "Hand Installed"	Minimum Distance Between Water-Bars (feet) "Equipment installed"
0 to 10	100	100
10 to 50	50	100
50+	50	75

- 2) **Location:** Locate waterbars at natural slope breaks or to take advantage of natural features when possible. Direct water to unburned areas, and/or resistant surfaces with high vegetation cover when possible. Waterbars should extend beyond the width of the trail and discharge into undisturbed areas, rocky ground, or filter areas well protected with slash and vegetative cover.
- 3) **Depth and Width:** Waterbars need to be cut into the ground surface; do not simply push up soil. On dozer constructed line waterbar depths should be at least 6 inches; total height from bottom of ditch to top of waterbar should average at least 12 inches and not exceed 24 inches. On hand-constructed lines waterbar depths should be at least 4 inches; total height from

bottom of ditch to top of waterbar should average at least 8 inches and not exceed 18 inches. The width of the waterbar channel should be enough to handle expected water flows and to avoid plugging when a normal amount of sloughing occurs.

- 4) **Angle:** Determine the average gradient in percent slope of the fire line being waterbarred. Add 5 to the average gradient. This approximates the angle in degrees for the waterbar. Do not install water bars at an angle steeper than 45 degrees as this will increase water velocity rather than slow it down.

D. Watercourses

- 1) Watercourse crossings should be dipped to original configuration. Waterbars should be installed on each side of channel to divert flow from trails prior to entering a watercourse channel.
- 2) Remove all soil and debris that was placed in any stream channel. A Repair Specialist will review the site for acceptability. If foreign material cannot be removed with heavy equipment, the material may be removed by hand. The approaches to the crossing shall be sloped back to prevent future stream bank failure.

E. Archaeological or Historic Sites (if discovered)

- 1) All sites and potential sites shall be flagged and avoided.
- 2) Impacted sites will be reported to the Suppression Repair Specialist as soon as possible.
- 3) If sites are encroached upon, work will stop immediately and the Division/Group Supervisor or Suppression Repair Specialist will be notified.

F. Other Repair Concerns

- 1) Remove all trash from fire lines and other affected areas.
- 2) Repair, broken, damaged fences, and/or gates damaged as the result of the fire control operations. Repairs may be to a functional, and not new standard (Note: Extent and condition of damage should be documented prior to repairs.)
- 3) To prevent OHV trespass and access around gates and other barriers where suppression activities changed access potential, place a barrier such as a large log, rock or soil mound to prevent entry.
- 4) Around all structures; avoid additional damage, identify hazards and mitigate where equipment or crew resources are available.

TRAINING SPECIALIST MESSAGE

A Training Specialist is available for trainees on the incident.

All State, Federal and local government agency Trainees working on Position Task Books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment. We are located next to Check-In.

Bring your task book with you.

Training Specialist
