HAZARD TREES

FIRE DAMAGED TREES IN and AROUND the FIRE AREA

Watch Out

- Working under and around conifers and oak trees
- Be aware of snags and widow makers
- Fire weakened and drought stressed trees

Mitigation

- Be vigilant and alert, "Look-Up" when working under and around any trees
- Post lookouts when necessary to mitigate a hazard within a stand of trees
- Isolate HAZARD trees with red and white, "THREE STRIPES you're out" flagging

INCLEMENT WEATHER

INCREASED POTENTIAL FOR ACCIDENT DUE TO RAIN AND WIND

Watch Out

- Vehicle maintenance records and annual maintenance
- First rains for this year / Wet and Oil slick roads in and around the fire perimeter
- The dirt roads within and around the fire perimeter are known for thick and deep mud production

Mitigation

- Confirm your vehicle maintenance is up-to-date and perform a daily safety inspection prior to going out on the line
- Drive for the conditions and not the speed limit, be cognizant of roadside workers
- Keep fire engines and other heavy equipment on asphalt and improved roads, pre-plan for smaller use to make emergency access to remote areas.

CITIZEN REPOPULATION

EVACUEES WILL BE RE-ENTERING FIRE EFFECTED AREAS

Watch Out

- Increased holiday weekend traffic and distracted drivers
- Potentially highly emotional citizens as repopulation continues and the reality of loss this community has suffered
- Unknown hazards by citizens re-entering burned areas

Mitigation

- Drive slowly and defensively. Calm the citizens, calm yourself. Set the example
- Remain patient and compassionate as we continue to be this areas fire department. Drive slow and be courteous, cautious and caring when travelling the area
- Be diligent and supportive to assist residence re-entering their properties

TAILBOARD SAFETY TOPICS

LARGE AMOUNTS OF RAINFALL IN FIRE AREA

ARE YOU IN AN AREA SUBJECT TO FLASH FLOODING, MUD OR DEBRIS?

Watch Out For

- Rapidly Changing Conditions – Expect the Unexpected!
- Increase water flows or raising waters
- Tree fall during storm conditions
- The need to support early and immediate evacuation of civilians
- One way in One Way Out Situations
- Washouts and Sinkholes
- Mud, silt and reactivated retardant causing road slick hazards

Mitigation

- Avoid entering the water – if you must, you must wear a PFD!
- React early to increasing flows and raising waters – escape early
- Don't be Complacent – these are not routine emergencies – don't under estimate the power of hydraulics
- React to unstable looking conditions – Mud Slides, Leaning Trees and undermined roads
- LCES Early!
L-ookouts posted – Post early with a lookout that understands the situation

C-ommunications (Establish a Plan and make it known using Face to Face and Radios)

E-scape Routes are recognized and made known to emergency personnel. In Flood conditions, consider shorter routes and earlier trigger points – Get to high ground

S-afety Zones are identified and large enough to assemble lots of equipment and personnel, perform a PAR

- Be on the lookout of other hazards such as hazardous materials, contaminated water, large debris in current and electrical hazards as examples

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
