WEATHER SUMMARY

****Warm and Dry, with Overnight NE Winds****
See Weather Forecast in IAP.

OUTPUTS

GENERAL: **Daytime Terrain and Fuel-Driven Fire with Wind-Dominated Fire Behavior at Night**
Expect varying windows for direct attack versus indirect, as related to flame lengths and rates of spread, based upon forecast wind and smoke coverage. Expect daytime upslope runs. Winds will be Northeast overnight, continuing to align downslope with the Feather River and Butte Creek drainages. Spotting will continue to present a concern.

ERC values continue to set new record highs for the entire month of November. Dead fuel moistures remain critical. Fuel conditions are more similar to late summer. It has been 212 days since the lower elevations last received 0.5" of precipitation.

Areas with most activity last two shifts have no recorded fire history: south of Goat Point (DIV E), east of Feather River (DIV A), and north of Paradise (DIV N/U).

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

| | Max. Flame Length | Max. Rate of Spread | Spotting | Probability of Ignition |
|-----------------------|-------------------|-----------------------------|----------------------|-------------------------|
| Grass | < 5' (1.5 m) | 30-50 ch/hr (0.6-1 km/hr) | < 0.25 mile (0.4 km) | 70% |
| Grass/Shrub Mix | < 7' (2 m) | 15-25 ch/hr (0.3-0.5 km/hr) | < 0.5 mile (0.8 km) | 70% |
| Shrub | < 10' (3 m) | 30-45 ch/hr (0.6-0.8 km/hr) | < 0.5 mile (0.8 km) | 73% |
| Timber Litter | < 5' (1.5 m) | 10-20 ch/hr (0.2-0.4 km/hr) | < 0.5 mile (0.8 km) | 73% |
| Slash-Blowdown | 10-15' (3-5 m) | 25-35 ch/hr (0.5-0.7 km/hr) | < 0.5 mile (0.8 km) | 73% |
| WUI/Shrub/Timber Runs | 15-25' (4-8 m) | 100-150 ch/hr (2-3 km/hr) | < 0.5 mile (0.8 km) | 73% |

****minimum safety zone size for brush fuels is 1/3 acre (0.1 Ha) for a Strike Team of Engines.**

****minimum safety zone size for slash fuels is 1/2 acre (0.2 Ha) for a Strike Team of Engines.**

****minimum safety zone size for WUI/shrub/timber is 1 acre (0.4 Ha) for a Strike Team of Engines.**

SPECIFIC:

Branch I, VI: Fire will have single and group tree torching and passive crown fire activity in timber stands, especially areas of dense canopy or ladder fuels; greatest activity 1000-1700. Expect mostly surface fire backing and flanking into the wind after 2000, with for short runs after rollout below or spotting. Clearcuts and thinned areas will exhibit lower rates of spread, but are highly susceptible to spotting.

Branch II, III, X: Expect rapid rates of spread in grass fuels wherever torching and ember cast is seen. Flame lengths will be lower in the shorter grass near Highway 99. Slightly lower POI due to shading from smoke. Greatest activity from 0900-1400 below 1,600'. Areas above 1,600 feet will increase in spotting and fire behavior with influence of overnight winds.

Areas of tactical advantage (water features, highways), normally utilized as barriers to fire spread, continue to be compromised with winds via spotting, during the entire shift. The fire has crossed a 300-foot span of Lake Oroville.

AIR OPERATIONS:

Improved visibility at higher elevations; little to no visibility in lower elevations. Heavy fuel consumption will continue to hinder operations with turbulence and smoke inversion.

Mixing height: 2,000 ft. AGL, Transport winds: SW 15 mph, Sunrise 0649, Sunset 1652.

SAFETY

Do not let your guard down due to lack of Red Flag Warning. Daytime terrain and fuels-driven fire will transition to sustained, strong winds in the evening; medium-range spotting entire shift.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

November 9, 2018

Subject: Unseasonably dry, mild weather the past few weeks has amplified fuel dryness in all size classes across Northern California. Extreme fire behavior and rapid to dangerous rates of spread continue to occur with high potential for that to persist through the week of November 11th.

Discussion: Unseasonably mild, very dry weather in recent weeks across Northern California this fall has kept fuels very dry and been expanding drought conditions. Although reasonably plentiful rain fell across much of the Geographic Area right around the beginning of October, recent dry weather has essentially erased any fuel moisture gains from that event. Much of the time since then, a ridge of high pressure persisting out over the Pacific Ocean has mostly been keeping a very dry airmass over the Geographic Area. The weather pattern during the past 3 weeks been particularly dry with a steady series of N to E foehn wind events that have contributed significantly to fuel dryness and challenging fire control conditions. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior. Even some internal islands in earlier large fire perimeters (e.g. Carr Fire) have reportedly rekindled, apparently from long-held residual heat. It is not just windy areas that have experienced rapid spread, but some fuel-and-slope-driven fires have also seen unseasonable, very active fire behavior.

Difference from normal conditions: Northern California normally sees enough precipitation by late October to bring about fire season-ending conditions. Early October's precipitation did mitigate fire danger for a bit, but unseasonably dry weather since then and several significant foehn wind events the past few weeks have created very dry fuel conditions much later into the fall season than usual. Very low daily afternoon minimum relative humidity (RH) values of 5-12% have been common, and recent wind events have limited overnight RH recovery to less than 25% in many locations and to less than 15% in some. This has had a dramatic effect on fuel dryness and fire danger indices which are now either near seasonal record values or at core fire season severity levels. For more information about the very unseasonable environmental conditions occurring, follow these links:

<https://www.esrl.noaa.gov/psd/eddi/> and ftp://ftp.cdc.noaa.gov/Public/mhobbins/EDDI/CN_DEWS/EDDI_01mn.png

Concerns to Firefighters and the Public:

- One hour fine fuel loading across the Geographic Area remains well above normal.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service at Weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: Most areas across Northern California could see active fire behavior, but the most severe conditions are in the Sacramento Valley and surrounding foothills, the western slopes of Cascade and Northern Sierra Nevada mountains, and Mendocino County southward, including all of the Bay Area. The PSA numbers associated with those areas are NC03A, NC03B, NC05 and NC07.

Archaeological and Historic Properties: Fireline Guidance for the Camp Incident, Butte County CA

Do not compromise safety for the protection and preservation of archaeological and historic properties. When possible and prudent:

1. Be on the lookout for prehistoric archaeological sites. These sites may include seasonal camps marked by the presence of obsidian and/or basalt flakes, bedrock mortar food processing sites, and village sites that contain the above and dark midden soils. The Native American group living in the area at time of historic contact was the Maidu.
2. Be on the lookout for historic archaeological sites. These sites may include old homesteads now marked by the presence of foundations, wells, and can dumps, early sawmill sites, abandoned ditches, mining tailings, and other mining features including adits (horizontal) and shafts (vertical).
3. Look for these prehistoric and historic sites in flat areas, especially adjacent to streams and springs.
4. Known sites will be marked with red/white striped plastic flagging tape.
5. If you observe artifacts, features, or sites attempt to avoid if possible. If you can't avoid, minimize ground disturbance as much as possible, only clearing the surface to as minimal a depth as necessary. Try to go around sites with dozers rather than through them. Flag new sites in red/white if possible.
6. If you find artifacts leave them in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
7. Note locations of discovered artifacts, features, and/or sites on a map. Better yet take a GPS reading if possible. Leave information for the archaeologist with the Situation Unit so that the sites can be relocated and protected during Fire Suppression Repair.
8. If you encounter a burial site cease work in the area and contact the archaeologist immediately.
