Comments /notes on tonight's mission and this interpretation: I started my interpretation with the 08/23/2018 IR heat perimeter. No new growth. On the following maps yellow is 8/23/2018's IR heat perimeter. Red line is current IR heat perimeter. There is a couple of isolated heat sources on the south side of the fire outside the main heat perimeter north and south of Cottonwood Creek.			
			

INFRARED INTERPRETER'S DAILY LOG

Light scattered heat throughout the fire. Most of the heat is on the north and northwest side of the fire.

South half of the fire has light isolated heat sources and scattered heat mainly on the west side of the fire.
