## Fire and COVID-19 Briefing Checklist

## Self-Awareness / Screening

- Immediately separate yourself from others.
- □ Notify supervisor if you or others experience:
  - 。Cough, more than expected
  - Shortness of breath or difficulty breathing
  - New loss of taste or smell
  - . Fever
  - 。 Chills
  - . Sore throat
  - . Muscle pain
- □ Review and follow crew and division plans to isolate, triage, and transport symptomatic personnel.

## Hygiene on the Fireline

- Properly wash or sanitize your hands often, especially before and after eating or entering a public place, and after coughing or sneezing.
- Avoid handshakes and communal use items.
- Maintain a supply of hand sanitizer and hand wipes. Inform supervisor of needed resupply.
- Disinfect high touch surfaces often:
  - Radios, phones, doors, pumps, fuel cans, etc.

## Social Distancing and Protective Equipment

- □ Initiate, practice, and remind others of social distancing.
- Conduct briefings and conversations outdoors and at least 6 feet apart.
- Utilize face coverings as a tool when practical.
- Clean or replace dirty face coverings, equipment, and PPE.

#### **Communications**

Face coverings and social distancing complicate communications.
 Ensure effective sender/receiver messaging.

## Protect yourself, your crew, and your camp!

#### \*\*\*HOT. DRY and UNSTABLE TODAY WITH POOR RH RECOVERY TONIGHT\*\*\*

DISCUSSION: Today will be another hot and dry day. Temperatures will once again climb into the 90s and minimum RH values will drop into the upper teens. Winds will be mainly diurnal and slope driven. Smoke will play a bigger role today with weak steering flow. This could keep temperatures a degree or two cooler. It should also keep things slightly more stable. Sunday will bring another shot of stronger northerly winds which will help to make things more unstable again. Very hot and dry conditions will persist as we head into next week.

#### **OUTPUTS**

#### **GENERAL:**

#### **BUTTE ZONE**

Continued unstable, hot, and dry air will lead to increased fire behavior and spotting potential. 1,000-hr dead fuel moisture at 90th percentile. Severe Drought conditions. Brush at critical fuel moisture.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

<sup>\*\*</sup>minimum safety zone size is 1/4-acre (0.1 Ha) for a Strike Team of Engines.

#### SPECIFIC:

Instability with hot, dry air create conditions for a potential increase in fire behavior. Watch for roll out & spotting with high probability of ignition.

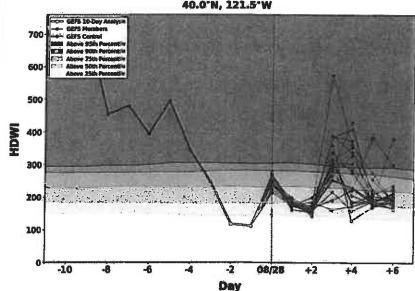

**Branch I:** Potential remains for fire to continue spotting and have roll out, especially in 1-7, 1-8, & 1-12. Mainly smoldering fire in understory. Flame lengths 3-8'.

Branch V / X: No anticipated fire growth.

Fire potential slightly decreased Sat-Sun with smoke cover. Still high potential for upslope runs and roll out. Watch for spotting through the night.

#### Max Daily HDWI

GEFS Analysis and Forecast & 1981-2010 CFSR Climatology 40.0°N, 121.5°W

Continued unstable, hot, and dry air will lead to increased fire behavior and spotting potential. 1,000-hr dead fuel moisture remains near 97th percentile. Severe Drought conditions. Brush at critical fuel moisture.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	7' (2.1 m)	70 ch/hr (1.4 km/hr)	< 1/4 mile (.4 km)	90%
Grass/Shrub Mix	9 (24 m)	40 GAAT (DAB KITAN)	A JAMES (AVIE)	1 1 2 1 2 0 M
Shrub	20' (6.0 m)	60 ch/hr (1.2 km/hr)	< 1/4 mile (.4 km)	90%
Timber Understory	12 (30 m)	20 tentos (0.5 km/m)	* (A mile ) Albert	90%
Timber Litter	5' (1.5 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	90%

<sup>\*\*</sup>minimum safety zone size for brush fuels is 3/4-acre (0.3 Ha) for a Strike Team of Engines.
\*\*minimum safety zone size for timber fuels is 1/2-acre (0.2 Ha) for a Strike Team of Engines.

#### SPECIFIC:

DIV A / X: Increased fire behavior in timber understory and brush stands, flame lengths ~70-20' (except where torching). Column will stand up slightly less than yesterday, with some single tree and group torching, and spotting ~1/4-mile in highly receptive fuel bed. Watch for slope reversal if fire reaches and crosses South Fork Cottonwood Creek or Sulphur Creek, toward Slides Ridge and Boswell Ridge.

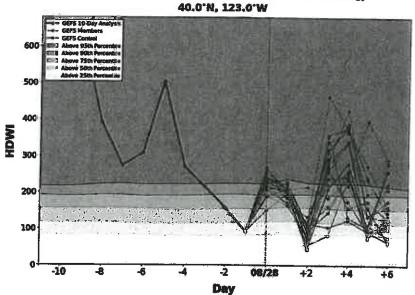

DIV C / V: Brush stands rapid rate of spread, flame lengths 15'+. Potential for fire whirls and spotting. Nighttime spread toward North Fork Elder Creek.

DIV N / Q / T: No fire activity expected.

Fire potential slightly decreased Sat-Sun with smoke cover. Still high potential for upslope runs and roll out. Watch for spotting through the night.

#### Max Daily HDWI

GEFS Analysis and Forecast & 1981-2010 CFSR Climatology 40.0°N, 123.0°W

Hot Dry Windy Index down to around 90<sup>th</sup> percentile. This is a good representation of fire potential and resistance to control.

#### AIR OPERATIONS:

Smoky. Reduced visibility.

Mixing height: 6,000 ft. AGL. Transport winds: W/SW 5 mph, Sunrise 0636, Sunset 1947.

#### SAFETY

Limited visibility may give you a false sense of security. Use LCES to ensure you know what your fire is doing at all times.

Work Assignments	-						

Hold fire within established control lines. Prepare lines for implementation of firing plan. Prepare and implement Structure Defense Plan. Direct fire attack when opportunites present.

#### 7. Special instructions:

No designated Safety Officers and no designated Line Medics. These positions are typically associated with team deployments however with resource draw down they are unavailable. Strike Team Leaders identify Safety Officer and Line Medic qualification and make them known to your Division Supervisor. You're responsible for your own lookout, identify one and make it known.

Briefing will be broadcasted on CDF TAC 29

SAFETY

TO	PO	GR	A	2 -	V
-	620		ST. A.	4	1

TERRAIN IS STEEP, WATCH YOUR STEP

#### Watch Out

- Steep Terrain makes mobility and travel difficult.
- Working above or below other crews in steep terrain can result in serious injury by dislodging rolling material
- Roll out can ignite receptive fuel beds below crews

#### **Mitigation**

- Pace yourselves, take frequent breaks when working on steep hillsides to combat fatigue, move slowly to prevent slips and trips
- Know who is working above and below you, yell out if rolling material begins to fall to advise crews below
- Utilize good line construction and trenching to ensure roll out does not occur

# FIRE WEAKENED TREES WIDOW MAKERS, SNAGS, and WEAKENED OAKS

#### Watch Out

- Areas having burned several days ago or near the beginning of this incident may have standing snags ready to fall
- Trees may fall without warning, afternoon/evening winds may increase potential
- Drought conditions have created snag patches in areas of all fires

## <u>Mitigation</u>

- Scout line prior to engagement in areas with drought ridden and bug kill trees, scout areas in daylight when possible
- Disengage in areas with weak and fire weakened trees when appropriate
- Flag hazard trees, prevent access as possible, and notify falling modules to mitigate hazard trees

# DEFENSIVE DRIVING REDUCE YOUR EXPOSURE

- SLOW DOWN AND ANTICIPATE:
  - ✓ Drive safely for the conditions of the road
  - Expect that someone will be in the road around the next turn
  - Anticipate what other drivers may do

#### **RE: Virtual Finance Support**

If you are assigned to a CAL FIRE managed incident, you have noticed that there is no "federal" time unit on site. We have developed a virtual finance section to provide you with your invoices/time sheets. We will need for you to scan and email your documents to the R5.CalFire.Support@firenet.gov email address. (If you do not have a "scanning" app on your phone and/or computer you may visit the clerical trailer. If no clerical trailer is available check in with the Finance Section for assistance.) In the subject line enter:

TIME - Resource # - Company/Person Name - Attachment description - Fire Name/Number

#### **Contract Crew/Equipment:**

We need for you to send us the following information (even if you have submitted it to the CAL FIRE finance unit):

- Contact name, phone number, and email for on-site "leader"
- Resource Order
- Contract (Pages 1-2 and any additional pages referencing equipment/resource information)
- **Crew Manifest**
- Inspection (if one was done)
- Shift Tickets (signed by you and your incident supervisor) / CTRs (signed by your incident supervisor)

### **Administratively Determined (AD) Resources:**

We need for you to send us the following information:

- Contact phone number and email
- **Resource Order**
- Casual Hire Form
- CTRs (signed by your incident supervisor)

#### **Federal Employees:**

As of right now, we are not planning to create OF-288s for Federal "regular" employees. Each of you can utilize your CTRs as your backup documentation for submitting your time sheets.

IF, however you require an OF-288, we will do our best to accommodate your needs. If you are claiming Hazard Pay, just like always, you must provide a justification for the claim ("H=Hazard") is NOT enough. Use "action verbs" to explain what/why you are claiming the hazard.

#### WHEN YOU ARE CLOSE TO DEMOR-

- Give Finance a "Courtesy Email" 1-2 days prior to make sure all your documents have been received.
- Submit all time documentation (including travel home) ahead of demob.
- Send an email the morning of your demob to the Support email so the demob process can be started from the virtual finance group.

# EMAIL: R5.CalFire.Support@firenet.gov

Please do not wait until the end of your assignment to get us your information. Since we are virtual, the process will take additional time

#### FIRE SUPPRESSION REPAIR Butte, Tehama, Glenn COMPLEX: CA-BTU-009692

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities, it is not the repair of areas damaged by the fire. We cannot upgrade facilities beyond their pre-fire condition. Any projects too large or complicated to be completed by the Fire Suppression Repair Group shall be turned over to the local Unit or the Comp/ Claims Unit.

Start Early!

Fire Suppression Repair needs should be reported on the attached form as soon as discovered. To the extent feasible, repair work should start as soon as practical. However, repair activities shall not hamper or conflict with fire suppression actions. When possible, construct waterbreaks (waterbars) on all dozer lines, handlines, and safety zones concurrent with line construction or mop-up operations. Scattered trash shall be collected and deposited at Drop Points. Police your areas.

Repair Site Inventory:

Field Observers and Fire Suppression Repair Group resources will be traveling throughout the fire looking for repair needs. All fire line resources are asked to contribute any known issues. The Suppression Repair Group will then evaluate each site, develop a specific repair plan, and schedule an appropriate repair with necessary resources.

**Infrastructure Damage:** 

Report the location and type of suppression damage to infrastructure. Common examples of such features include:

- Fences /gates
- Culvert/ Bridge/ Other watercourse crossings
- Water sources
- Utility distribution line; above/below ground.
- Restore barriers on roads previously closed but opened for suppression activities.
- Remove trash and debris, including flagging and signs when no longer needed.
- Misc. damage to residential property

Natural Resource Damage:

This category represents repairing existing problems caused by fire suppression activities (direct effect) and to prevent likely future problems such as accelerated erosion caused by winter rains (indirect effect).

- Construct drivable waterbars or rolling dips on unsurfaced roads.
- Construct waterbars on all dozer and hand lines according to the following Specifications: Waterbreaks shall be cut diagonally with a minimum depth of 6" into existing grade with a 12" berm for a minimum height of 18". Waterbreaks will be installed at a 30-45 degree angle. Outlets shall be open and directed onto least erodible material possible.

Line or Road Gradient (%)	0-10%	11-25%	26-50%	>50%
Waterbreak Spacing	100°	100'	75'	50'

- Remove all berms created by suppression activities unless necessary to divert runoff from a sensitive site.
- Clean culverts and drainage facilities plugged with soil and debris by fire suppression activities.
- All slash, soil, and debris deposited into watercourses shall be removed and stabilized.
- All work within 100 feet of a watercourse, cultural site or other sensitive location shall be performed by hand crews to avoid further damage. This applies to all direct and indirect lines.

Cultural Site Damage:

Report any disturbance to a known or suspected archaeological/historical site through chain of command to the incident Archaeologist and/or the Fireline Suppression Repair Group immediately. This includes any air tanker drops upon a site. Use least disturbing suppression methods possible unless life safety is at risk. Flag site perimeter for identification. Removing or disturbing any artifact is not permissible.

Comp Claims Issues:

Damaged resources that are too large or complex for the Fireline Suppression Group to handle shall be turned over to Comp Claims for processing. Examples of such issues include damage to pavement, bridges, pipelines, etc.

# CAL FIRE

# INCIDENT MANAGEMENT TEAM **WATER USAGE PLAN**

# California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

## Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

#### Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

#### **Aviation Operations-**

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

#### Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

#### Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

#### Management and Supervision-

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
