DISCUSSION: After a night of poor recoveries at higher elevations, hot and dry conditions will persist through the period. Expect mostly terrain driven winds with diurnal influence. Transport winds (aloft) will carry smoke from south to north, making the best chance for clear air over the south and southwest corners. If/where air does clear, expect instability to ramp up quickly. Temperatures will continue to climb with mid 90s for the mid-elevations and over 100 in the lower elevations. Expect much better recoveries Saturday night into Sunday. Sunday and Monday will be the hottest days of this heatwave.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 18	TYPE OF FIRE: Wildland Fire
FIRE NAME: BTU/TGU Lightning Complex	OPERATIONAL PERIOD: 24hr 9/5 (0700-0700)
DATE ISSUED: 9/4/2020	TIME ISSUED: 1900
UNIT: TGU	SIGNED: Jonathan Pangburn, FBAN <i>Jonathan M. Pangburn</i>

INPUTS

WEATHER SUMMARY

****HOT, DRY, WIND SHIFT AFTERNOON****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

Similar to yesterday: reduced fire behavior during the day with smoke cover. Upslope daytime winds 4-8 mph. Afternoon & overnight, expect south-southwest wind to start to clear smoke & allow uptick in fire behavior. Overnight, poor RH recovery will promote consumption and growth, except when smoky.

1,000-hr dead fuels above 90th percentile; 100-hr & ERC just below 90th percentile. Severe Drought conditions. Brush at critical fuel moisture.

Low rate of spread & spotting potential in morning, increasing to moderate rate of spread & high spotting potential with South winds and any clear air. Any smoke settling will hinder firing operations.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	5' (1.5 m)	25 ch/hr (0.5 km/hr)	< 1/4 mile (.4 km)	75%
Grass/Shrub Mix	6' (1.8 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	75%
Shrub	15' (4.5 m)	30 ch/hr (0.6 km/hr)	< 1/4 mile (.4 km)	75%
Timber Understory	10' (3.0 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	75%
Timber Litter	5' (1.5 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	75%

****minimum safety zone size for is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV A: Low intensity fire in morning, west of Sanford Ridge toward Rat Trap & Lazyman Ridge. Possible torching under any clear air, plus possible upslope run to Humboldt Trail, 35 Road, & Murphy Glades. Watch for Hopkins & Willow Basin Fires to make a run across S Fork Trinity River, Devil's Hole Gulch/Lazyman Ridge, & North Yolla Bolly.

DIV X: Watch for spotting into S. Fork Cottonwood Creek & Buck Creek, north & west of Harvey Ridge; may run toward DIV A, Syd Cabin Ridge. Possible fire coming from DIV WW / YY to DIV X / V.

DIV T: Potential for SE wind to push spots into green with any wind or clear air. Smoke may hinder firing.

DIV WW: Rd 25N08E & 24N85 watch for any spots across Riley Ridge Dozer line; South Fork Elder Creek has heavier fuel loading & slope reversal to Raglin Ridge. Any clear air will promote crowning and spotting.

DIV YY: Surface fire turning to single/group torching with any clear air. North of Snake Ridge on M22, watch for heavier fuel loading in plantations. Fire may pick up activity in Black Flat, Fish Creek, Thomes Creek, and Boswell Ridge, especially with wind aligned with channels and ridges.

DIV B / C / N / Q / V / TT: No fire activity expected.

AIR OPERATIONS:

Smoky, becoming partly clear. Smoke impacts lessen afternoon, and mostly clear Saturday.
Mixing height: 6,000 ft. AGL. Transport winds: S/SW 10-15 mph, Sunrise 0642, Sunset 1936.

SAFETY

Fire active, even under smoke – spotting & torching stil_6_served. Watch for shift to South wind in afternoon.

FIRE SUPPRESSION REPAIR
Butte, Tehama, Glenn COMPLEX: CA-BTU-009692

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities, it is not the repair of areas damaged by the fire. We cannot upgrade facilities beyond their pre-fire condition. Any projects too large or complicated to be completed by the Fire Suppression Repair Group shall be turned over to the local Unit or the Comp/ Claims Unit.

Start Early!

Fire Suppression Repair needs should be reported on the attached form as soon as discovered. To the extent feasible, repair work should start as soon as practical. However, repair activities shall not hamper or conflict with fire suppression actions. When possible, construct waterbreaks (waterbars) on all dozer lines, handlines, and safety zones concurrent with line construction or mop-up operations. Scattered trash shall be collected and deposited at Drop Points. Police your areas.

Repair Site Inventory:

Field Observers and Fire Suppression Repair Group resources will be traveling throughout the fire looking for repair needs. All fire line resources are asked to contribute any known issues. The Suppression Repair Group will then evaluate each site, develop a specific repair plan, and schedule an appropriate repair with necessary resources.

Infrastructure Damage:

Report the location and type of suppression damage to infrastructure. Common examples of such features include:

- Fences /gates
- Culvert/ Bridge/ Other watercourse crossings
- Water sources
- Utility distribution line; above/below ground.
- Restore barriers on roads previously closed but opened for suppression activities.
- Remove trash and debris, including flagging and signs when no longer needed.
- Misc. damage to residential property

Natural Resource Damage:

This category represents repairing existing problems caused by fire suppression activities (direct effect) and to prevent likely future problems such as accelerated erosion caused by winter rains (indirect effect).

- Construct drivable waterbars or rolling dips on unsurfaced roads.
- Construct waterbars on all dozer and hand lines according to the following Specifications: Waterbreaks shall be cut diagonally with a minimum depth of 6" into existing grade with a 12" berm for a minimum height of 18". Waterbreaks will be installed at a 30-45 degree angle. Outlets shall be open and directed onto least erodible material possible.

Line or Road Gradient (%)	0-10%	11-25%	26-50%	>50%
Waterbreak Spacing	100'	100'	75'	50'

- Remove all berms created by suppression activities unless necessary to divert runoff from a sensitive site.
- Clean culverts and drainage facilities plugged with soil and debris by fire suppression activities.
- All slash, soil, and debris deposited into watercourses shall be removed and stabilized.
- All work within 100 feet of a watercourse, cultural site or other sensitive location shall be performed by hand crews to avoid further damage. This applies to all direct and indirect lines.

Cultural Site Damage:

Report any disturbance to a known or suspected archaeological/historical site through chain of command to the incident Archaeologist and/or the Fireline Suppression Repair Group immediately. This includes any air tanker drops upon a site. Use least disturbing suppression methods possible unless life safety is at risk. Flag site perimeter for identification. Removing or disturbing any artifact is not permissible.

Comp Claims Issues:

Damaged resources that are too large or complex for the Fireline Suppression Group to handle shall be turned over to Comp Claims for processing. Examples of such issues include damage to pavement, bridges, pipelines, etc.

- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
