WEATHER DISCUSSION: ***Red Flag Conditions for gusty winds and low humidity from 10pm tonight through 8 am Wednesday*** Hot and very dry conditions are expected today with temperatures in the lower 100s in lower elevations to lower 90s around 5000 feet. Relative humidity will again fall into the lower teens this afternoon. Smoke will continue to suppress the rise in temperatures and keep instability at bay for much of the afternoon. However, areas further south and west will have the best chance for some clearing allowing for the increased instability and isolated higher wind gusts. Conditions will change significantly tonight as a dry cold front moves through the region beginning around 10 pm tonight bringing stronger north winds and continued low humidity.

TODAY:

WEATHER: Dense smoke and haze.

MAX TEMP: 3000 feet: 99-104° **MIN RH:** 3000 feet: 10-15%
5000 feet: 92-97° 5000 feet: 11-16%

CHC WTG RAIN: 0% **LAL:** 1

WINDS: 3000 feet: NW 3-5 mph becoming S-SE 4-6 mph with gusts to 10 mph after 1300.
(20 FOOT) 5000 feet: NW 4-6 mph becoming S-SE 5-8 mph with gusts to 12 mph after 1300, mostly near Div TT.

MIXING HEIGHT: 800 feet rising to 3000 feet in dense smoke areas to 5000 feet under clearer areas.

TRANSPORT WIND: SW around 10 mph.

VISIBILITY: 4-6 miles in smoke with lower visibilities (1/2 mile) near the fire.

TONIGHT:

WEATHER: Dense smoke and haze in the evening. Smoke clearing late tonight into Tuesday morning.

MIN TEMP: 3000 feet: 65-70° **MAX RH:** 3000 feet: 23-28%
5000 feet: 64-69° 5000 feet: 25-30%

CHC WTG RAIN: 0% **LAL:** 1

WINDS: 3000 feet: S-SE wind 4-6 mph in the evening transitioning to the north 10-15 mph with gusts to 25 mph after 2200.
(20 FEET) 5000 feet: S-SE wind 5-8 mph with gusts to 12 mph in the evening transitioning to the north 13-17 mph with gusts approaching 30 mph after 2200.

MIXING HEIGHT: Decreasing to 800 feet AGL overnight.

TRANSPORT WIND: SW around 10 mph becoming north at 25 mph after 2200.

EXTENDED OUTLOOK: Tuesday through Wednesday: Stronger north winds of 15-25 mph with gusts up to 35 mph and low relative humidity will create critical fire weather conditions Tuesday. Winds will gradually diminish Tuesday night with a lighter northeast wind Wednesday as temperatures moderate into the upper 80s. However, the area will remain dry with relative humidity improving somewhat by midweek.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 20	TYPE OF FIRE: Wildland Fire
FIRE NAME: BTU/TGU Lightning Complex	OPERATIONAL PERIOD: 24hr 9/7 (0700-0700)
DATE ISSUED: 9/6/2020	TIME ISSUED: 1900

INPUTS

WEATHER SUMMARY

****HOT & DRY WITH NORTH WIND OVERNIGHT****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

Daytime smoke cover will yield to overnight North wind. Expect poor RH recoveries and clear skies to increase fire behavior, especially after sunset. Daytime, expect reduced fire behavior under smoke cover.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 1,000-hr dead fuels above 90th percentile; 100-hr & ERC near 90th percentile. Severe Drought conditions. Brush at critical fuel moisture.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	5' (1.5 m)	25 ch/hr (0.5 km/hr)	< 1/4 mile (.4 km)	70%
Grass/Shrub Mix	6' (1.8 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	70%
Shrub	15' (4.5 m)	30 ch/hr (0.6 km/hr)	< 1/4 mile (.4 km)	70%
Timber Understory	10' (3.0 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	70%
Timber Litter	5' (1.5 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	70%

****minimum safety zone size for is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV A: Continued low intensity, west of Sanford Ridge toward Rat Trap & Lazyman Ridge. Possible torching under any clear air, plus possible upslope run & spotting to Humboldt Trail & 35 Road. Heavy understory fuels have potential for active crown fire if fire reaches Murphy Glades area of 35 Road. Watch for Hopkins & Willow Basin Fires to make a run once they move west of the 2017 Buck Fire footprint, toward Devil's Hole Gulch/Lazyman Ridge & North Yolla Bolly.

DIV X: Continued fire progression in Sulphur Creek & South Fork Cottonwood Creek. Fire will make a run to DIV ZZ from Slide Creek & Mount Linn. Watch for spotting & spread toward Oven Lid & DP-41.

DIV WW: There is still a potential for slope reversal and a rapid run to Raglin Ridge. Any clear air will promote crowning and spotting.

DIV YY: Surface fire turning to single/group torching with any clear air. North of Snake Ridge on M22, watch for heavier fuel loading in plantations. Fire may pick up activity in Black Flat, Fish Creek, Thomes Creek, and Boswell Ridge, especially with wind aligned with channels and ridges.

DIV ZZ: Expect torching, potential for short crown runs. Increasing fire behavior and spotting potential after sundown, with clear air. Watch for spread and spotting into 25N27, Fish Ridge, & M22.

DIV B / C / N / Q / T / V / TT: No fire activity expected.

AIR OPERATIONS:

Smoky, limited visibility, leading to clearer air.

Mixing height: 8,500 ft. AGL. Transport winds: N/NW 10 mph. Sunrise 0646, Sunset 1934.

SAFETY

Fuels driven fire behavior. North wind overnight will allow for clear air, which will lead to extreme fire behavior late tonight through Wednesday morning.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

- 2019-20 growing season 4th highest total

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

DRIVING

DRIVING CONTRIBUTES TO ONE OF THE LEADING CAUSES OF FIREFIGHTER FATALITIES

Watch Out - Maintain a high level of situational awareness in all driving situations and while working near roadways **"SLOW DOWN"**

- Very narrow, steep roads exist throughout the fire area
- Some areas of the fire require long travel times
- Smoke conditions at times are compromise visibility

Mitigation - Drive with a high level of Situational Awareness and adjust driving techniques per your situation

- Don't "thread the needle". Don't take your vehicle where it doesn't belong
- Use spotters and back-up personnel in tight situations
- If you're feeling drowsy, don't drive, stop and rest, change drivers or contact ground support and request a relief driver

HIDDEN HAZARDS

EXTENDED DAYS OF BURNING VEGETATION CREATES UNSEEN HAZARDS

Watch Out - Be on the lookout for hidden hazards

- Avoid trees that have been burning for long periods of time
- Areas of the burn having been logged and stumps remain
- Utility poles within and around the fire perimeter

Mitigation - If it doesn't look right make it known

- Flag hazard trees and communicate the dangers to your supervisor
- Stump holes are difficult to identify, use your hand tool to feel for ground depth
- "Look-Up", evaluate and identify and make known **Hazardous Utility Poles** in your work area

DEMOB

ACCIDENTS CAN HAPPEN DURING DEMOB

Watch Out - Be on the lookout for vehicle and pedestrian congestion

- Vehicles will be moving in tight areas around Ground Support and parking areas
- Increased backing and maneuvering of vehicles in tight spots
- Crews may be in a hurry to leave the incident due to reassignment

Mitigation - Maintain high levels of situational awareness throughout the demob process

- Provide back-up and spotter personnel – more than one may be required
- Drive safely and be on the lookout for ICP pedestrian traffic
- Drive safely and monitor fatigue when traveling to home unit or new incident

Each Safety Message is designed for a daily Tailgate Safety discussion

FIRE SUPPRESSION REPAIR
Butte, Tehama, Glenn COMPLEX: CA-BTU-009692

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities, it is not the repair of areas damaged by the fire. We cannot upgrade facilities beyond their pre-fire condition. Any projects too large or complicated to be completed by the Fire Suppression Repair Group shall be turned over to the local Unit or the Comp/ Claims Unit.

Start Early!

Fire Suppression Repair needs should be reported on the attached form as soon as discovered. To the extent feasible, repair work should start as soon as practical. However, repair activities shall not hamper or conflict with fire suppression actions. When possible, construct waterbreaks (waterbars) on all dozer lines, handlines, and safety zones concurrent with line construction or mop-up operations. Scattered trash shall be collected and deposited at Drop Points. Police your areas.

Repair Site Inventory:

Field Observers and Fire Suppression Repair Group resources will be traveling throughout the fire looking for repair needs. All fire line resources are asked to contribute any known issues. The Suppression Repair Group will then evaluate each site, develop a specific repair plan, and schedule an appropriate repair with necessary resources.

Infrastructure Damage:

Report the location and type of suppression damage to infrastructure. Common examples of such features include:

- Fences /gates
- Culvert/ Bridge/ Other watercourse crossings
- Water sources
- Utility distribution line; above/below ground.
- Restore barriers on roads previously closed but opened for suppression activities.
- Remove trash and debris, including flagging and signs when no longer needed.
- Misc. damage to residential property

Natural Resource Damage:

This category represents repairing existing problems caused by fire suppression activities (direct effect) and to prevent likely future problems such as accelerated erosion caused by winter rains (indirect effect).

- Construct drivable waterbars or rolling dips on unsurfaced roads.
- Construct waterbars on all dozer and hand lines according to the following Specifications: Waterbreaks shall be cut diagonally with a minimum depth of 6" into existing grade with a 12" berm for a minimum height of 18". Waterbreaks will be installed at a 30-45 degree angle. Outlets shall be open and directed onto least erodible material possible.

Line or Road Gradient (%)	0-10%	11-25%	26-50%	>50%
Waterbreak Spacing	100'	100'	75'	50'

- Remove all berms created by suppression activities unless necessary to divert runoff from a sensitive site.
- Clean culverts and drainage facilities plugged with soil and debris by fire suppression activities.
- All slash, soil, and debris deposited into watercourses shall be removed and stabilized.
- All work within 100 feet of a watercourse, cultural site or other sensitive location shall be performed by hand crews to avoid further damage. This applies to all direct and indirect lines.

Cultural Site Damage:

Report any disturbance to a known or suspected archaeological/historical site through chain of command to the incident Archaeologist and/or the Fireline Suppression Repair Group immediately. This includes any air tanker drops upon a site. Use least disturbing suppression methods possible unless life safety is at risk. Flag site perimeter for identification. Removing or disturbing any artifact is not permissible.

Comp Claims Issues:

Damaged resources that are too large or complex for the Fireline Suppression Group to handle shall be turned over to Comp Claims for processing. Examples of such issues include damage to pavement, bridges, pipelines, etc.

- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as an Management Objective.
