- Keep the fire West of Big Peak.

**General Situational Awareness:**

Steep and rugged terrain, critically dry and receptive fuel beds, active area for fire history and drought stressed trees.

In the COVID-19 environment, high density populations or large groups are particularly at risk. To help protect yourself, your family and to ensure all employees return home safely, make sure to practice social distancing.

Enhanced hygiene (especially handwashing), PPE & monitoring practices help limit the infection rate of first responders.

# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 3	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex West Zone	OPERATIONAL PERIOD: 24hr 9/12 (0700-0700)
DATE ISSUED: 9/11/2020	TIME ISSUED: 1900
UNIT: BTU	SIGNED: <b>Jonathan Pangburn, FBAN</b> <i>Jonathan Pangburn</i>

## INPUTS

### WEATHER SUMMARY

**\*\*CONTINUED DENSE SMOKE COVER\*\***  
See Weather Forecast in IAP.

## OUTPUTS

### GENERAL:

Fuel moisture levels remain critical for both live and dead fuels. Warm conditions, low RH, and poor recovery overnight will continue smoldering and creeping, with occasional torching, despite smoke cover. Reduced fire behavior overall under any smoke conditions – any clear air will lead to short duration runs. Typical diurnal slope winds may increase fire activity.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 1,000-hr/100-hr dead fuels, BI, & ERC above 97<sup>th</sup> percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	5' (1.5 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	55%
Grass/Shrub Mix	5' (1.5 m)	15 ch/hr (0.3 km/hr)	< 1/4 mile (.4 km)	55%
Shrub	12' (3.6 m)	35 ch/hr (0.7 km/hr)	< 1/4 mile (.4 km)	55%
Timber Understory	7' (2.1 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	55%
Timber Litter	5' (1.5 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	55%

**\*\*minimum safety zone size is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

### SPECIFIC:

**DIV C:** No recent fire history around Clipper Mills and Strawberry Valley. Expect creeping understory burn. Any clear air has high potential for crown fire near Lost Creek Reservoir, with extensive understory fuels.

**DIV F:** Heavier fuels in Forbestown area, with potential for wind eddies in channels. While the potential for crown runs has diminished, there's still a potential for torching in timber. Fire south of Ponderosa Reservoir will be in older fuel, with understory conducive to torching, even under smoke cover.

**DIV I / M:** Fine fuels have potential for spotting and fire run with NE-SW oriented drainages. Heavier accumulations in oak and gray pine will continue to smolder & produce ember cast. Greater winds at lower elevations, with less sheltering.

**DIV R:** Fire weakened trees and downed material may lead to ember cast into fine fuels.

**DIV T:** Strong wind channeling expected in the Concow/Pulga/Cresta area. Ridgelines carry winds, especially overnight downslope runs. Reduced fuels in Camp Fire footprint north of Feather River, but still potential to carry into dead, downed fuels. South of Feather River, timber still present for torching

Timber stands are carrying fire like southern California chaparral. Expect torching to return to active crown fire with any clear air. Shrub and timber putting off BTUs like jackpots of slash; ensure safety zones are appropriate for potential heat output.

### AIR OPERATIONS:

Very limited visibility under smoke.

Mixing height: 2,000 ft. AGL. Transport winds: 3-5. Sunrise 0644, Sunset 1917.

## SAFETY

Don't fall into the "same old – same old" trap. Fire behavior can change in an instant. STAY ALERT!

# Fuels and Fire Behavior Advisory

## Northern California Geographic Area

September 7, 2020

**Subject:** Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

**Discussion:** Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

**Difference from normal conditions:** Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

#### Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

#### Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

**Area of Concern:** All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.
