 - Cough, more than expected
 - Shortness of breath or difficulty breathing
 - New loss of taste or smell
 - Fever
 - Chills
 - Sore throat
 - Muscle pain
- Review and follow crew and division plans to isolate, triage, and transport symptomatic personnel.

Hygiene on the Fireline

- Properly wash or sanitize your hands often, especially before and after eating or entering a public place, and after coughing or sneezing.
- Avoid handshakes and communal use items.
- Maintain a supply of hand sanitizer and hand wipes. Inform supervisor of needed resupply.
- Disinfect high touch surfaces often:
 - Radios, phones, doors, pumps, fuel cans, etc.

Social Distancing and Protective Equipment

- Initiate, practice, and remind others of social distancing.
- Conduct briefings and conversations outdoors and at least 6 feet apart.
- Utilize face coverings as a tool when practical.
- Clean or replace dirty face coverings, equipment, and PPE.

Communications

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 6	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex West Zone	OPERATIONAL PERIOD: 24hr 9/15 (0700-0700)
DATE ISSUED: 9/14/2020	TIME ISSUED: 1900
UNIT: BTU	SIGNED: Jonathan Pangburn, FBAN 

INPUTS

WEATHER SUMMARY

****MOSTLY CLEAR SKIES; WARM & DRY WITH AFTERNOON BREEZE****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

SW winds, low RH, poor recoveries, and warm temps. Clear air likely to produce plume development at higher elevations in the North and South Zones. Fuel moisture levels remain critical for both live and dead fuels. Increased burn conditions into Wednesday. Burning will continue overnight with low RH.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 1,000-hr/100-hr dead fuels & ERC at 97th percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	5' (1.5 m)	35 ch/hr (0.7 km/hr)	< 1/4 mile (.4 km)	80%
Grass/Shrub Mix	5' (1.5 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	80%
Shrub	15' (4.5 m)	50 ch/hr (1.0 km/hr)	< 1/4 mile (.4 km)	80%
Timber Understory	9' (2.7 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	80%
Timber Litter	4' (1.2 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	80%

****minimum safety zone size for brush is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

****minimum safety zone size for timber understory is 1/3-acre (0.1 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV C / D: Potential for torching and crown fire with considerable ladder fuels in regrowth and understory around Mooreville Ridge. No recent fire history around Clipper Mills and Strawberry Valley. High spotting potential from Sugar Pine Point to Jackass Flat. Lost Creek & Sly Creek Reservoirs may produce crown fire and strong ember cast.

DIV F: Little fire activity observed. Forbestown & Ponderosa Reservoir have heavier fuels, with torching possible if a spot or slop establishes. Forbestown Ravine aligned for updrainage run.

DIV I / M / R: Little to no fire growth expected. Stringtown, Bloomer Hill, and Cherokee areas still have spotting potential. Fine fuels in understory will respond to clear air.

DIV T: Watch for any fire west of Chino Ridge/Hungary Hunt Peak, due to extensive jackpots of fuel around previous logging landings, with a good grass crop to carry fire. Strong wind channeling expected in the Feather River drainage and surrounding areas. Ridgelines will see strong wind gusts. China Gulch will channel any fire spread. Yankee Hill, Jarbo Gap, & Bardees Bar areas have fine fuels conducive to spotting.

AIR OPERATIONS:

Mostly clear.

Mixing height: 8,000 ft. AGL. Transport winds: S 15 mph. Sunrise 0647, Sunset 1913.

SAFETY

Slash makes for long burnout time; only use cold black as safety zone.

Common denominators to consider:

1. Fatalities occur on relatively small fires or **deceptively quiet areas of large fires.**
2. Fatalities occur in **relatively light fuels, such as grass**, herbs, and light brush.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

- 2019-20 growing season 4th highest total
- 5 seasons of above normal in a row

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

COVID-19

REDUCE THE EXPOSURE AND SPREAD BY KNOWING

Watch Out - If you're experiencing any of the following let your supervisor know

- Persistent fever with chills for consecutive days
- Cough, shortness of breath that leads to difficulty breathing
- Vomiting and diarrhea coupled with a loss of smell and taste

Mitigation - These simple steps will decrease the likelihood of catching COVID-19

- Clean hands make a difference, wash often
- Cover your mouth and nose with a mask when around others, cover coughs and sneezes
- Continually clean and disinfect and always monitor your health daily

HIDDEN HAZARDS

EXTENDED DAYS OF BURNING VEGETATION CREATES UNSEEN HAZARDS

Watch Out - Be on the lookout for hidden hazards

- Avoid trees that have been burning for long periods of time
- Areas of the burn having been logged and stumps remain
- Utility poles within and around the fire perimeter
- Cooler weather yet suffering dehydration?

Mitigation - If it doesn't look right make it known

- Flag hazard trees and communicate the dangers to your supervisor
- Stump holes are difficult to identify, use your hand tool to feel for ground depth
- "Look-Up", evaluate and identify and make known **Hazardous Utility Poles** in your work
- Stay hydrated with a balanced consumption of electrolytes, keep caloric intake up

DRIVING

DRIVING CONTRIBUTES TO ONE OF THE LEADING CAUSES OF FIREFIGHTER FATALITIES

Watch Out - Maintain a high level of situational awareness in all driving situations and while working near roadways "SLOW DOWN"

- Very narrow, steep roads exist throughout the fire area
- Some areas of the fire require long travel times
- Smoke conditions at times are compromising visibility

Mitigation - Drive with a high level of Situational Awareness and adjust driving techniques per your situation "LIGHTS ON!"

- Don't "thread the needle". Don't take your vehicle where it doesn't belong
- Use spotters and back-up personnel in tight situations
- If you're feeling drowsy, don't drive, stop and rest, change drivers or contact ground support and request a relief driver

Each Safety Message is designed for a daily Tailgate Safety discussion

EMERGENCY FIRE SUPPRESSION REPAIR PLAN – NORTH COMPLEX WEST ZONE

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas caused by the fire. We cannot upgrade facilities beyond their pre-fire condition. Fire suppression repair shall be applied to mitigate infrastructure damage and natural resource damage.

Infrastructure Damage: Culverts and other watercourse crossings, water sources, trails, road barriers removed for fire access, trash, debris and supplies left by fire suppression activities; miscellaneous.

Natural Resource Damage: Repair of existing problems caused by fire suppression activities (direct effect) to natural resources and to prevent likely future problems such as accelerated erosion caused by rains (indirect effect). The goal is to minimize soil erosion, adverse impacts to water quality, and adverse impacts to protected species of plants and animals

REPAIR GUIDELINES

General: Restore berms and barriers removed for fire control access.

Drop Points/Staging Areas/Safety Zones: New construction - cross drain and abandon (if applicable). Existing - repair to original condition, remove debris resulting from use. Pick up all trash.

Roads: Reshape soil surfaced roads that were used during fire control operations. Roads should be out-sloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.

Firelines: Break apart dozer piles of pushed over trees, vegetation and soil, and spread along tractor roads, tractor fire breaks, or any other areas disturbed during fire suppression activities. Lop and scatter displaced vegetation to a height of less than 30 inches or chip within 100' of a public or unlocked private road or structure. Scatter the lopped material along the fire line. Pull back any excess soil material sidecast along roads or tractor disturbed areas that are located within 100 feet of any watercourse or spring. Install waterbreaks on all constructed or used dozer lines using the following criteria:

Fireline and road gradient(%) oak woodland:	0-10	11-25	26-50	>50
Fireline waterbreak spacing:	150'	100'	75'	50'
Road waterbreak spacing:	300'	200'	150'	100'
Fireline and road gradient(%) Timber	:0-10	11-25	26-50	>50
Fireline waterbreak spacing:	100'	75'	50'	25'
Road waterbreak spacing:	200'	150'	100'	75'

Waterbreaks and/or rolling dips shall be used to reduce the volume and velocity of water by directing it off fire lines as soon as possible at controlled locations. The outfall end of all waterbreaks shall be opened by hand if necessary. Waterbreaks should be located to discharge into natural vegetation. Waterbreaks should cross the fire line at an angle of approximately 45 degrees.

Handlines: Install waterbreaks as needed based on slope and soil erodibility.

All waterbreaks shall be installed diagonally with a minimum cut of 6" into existing grade, and minimum height of 12". Waterbreaks shall be constructed to allow for drainage at the discharge end into non-erodible material.

Slash Piles: Piles within 150' of permanent structures or public roads will be lopped and/or scattered within 18" of the soil surface.

Piles along roads and fences: Lop to fire protection standards to ensure decreased fire risk is obtained. Scatter smaller debris where applicable.

Watercourse Crossings: All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized above the high-water line.

Major watercourse damage, if present, shall be reported to the Fire Suppression Repair Specialist prior to the end of the shift day.

Where fire lines are constructed within 100' of flowing watercourses, slash or straw mulching will be applied. All loose soil must be pulled away from the watercourse and stabilized.

Archaeological or Historic Sites: All potential sites shall be avoided. Contact Incident Archaeologist or the Suppression Repair Specialist.
