Fire Weather Forecast

FORECAST NO: 7
 PREDICTION FOR: Tuesday - Tuesday Night
 DATE: September 16th, 2020
 FORECAST ISSUED: 1900 September 15th, 2020

Fire: North Complex West Zone
 UNIT: Plumas/Butte

Change coming on Thursday

WEATHER DISCUSSION: Expect another warm and relatively sunny day as smoke should again lift out of the area by late morning or early afternoon. Winds will be slope and valley driven, and depending on location may favor an upslope flow, before an up valley and general southwesterly wind prevails. Winds just above the inversion will be southerly at 20 mph so any columns that develop will be ventilated. It will take longer for the winds to switch to downslope tonight so expect poor recoveries ahead of a cold front which moves through the area Thursday. The front will bring windier conditions but higher humidity. Friday will be a breezy but cool and humid day behind the front.

TODAY:

WEATHER: Smoke in the morning decreasing after 1100 then mostly sunny in the afternoon.

WEATHER SUMMARY

****BREEZY WITH CLEAR SKY****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

Fire activity reduced overall in West Zone. Clear skies and breezy conditions remain. Crown fire potential still exists, with critical fuel moisture and heavy ladder fuels.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 1,000-hr/100-hr dead fuels & ERC at 97th percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

| | Max. Flame Length | Max. Rate of Spread | Spotting | Probability of Ignition |
|-------------------|-------------------|----------------------|--------------------|-------------------------|
| Grass | 6' (1.8 m) | 40 ch/hr (0.8 km/hr) | < 1/2 mile (.7 km) | 90% |
| Grass/Shrub Mix | 8' (2.4 m) | 25 ch/hr (0.5 km/hr) | < 1/2 mile (.7 km) | 90% |
| Shrub | 17' (5.1 m) | 60 ch/hr (1.2 km/hr) | < 1/2 mile (.7 km) | 90% |
| Timber Understory | 11' (3.3 m) | 15 ch/hr (0.3 km/hr) | < 1/2 mile (.7 km) | 90% |
| Timber Litter | 5' (1.5 m) | 10 ch/hr (0.2 km/hr) | < 1/2 mile (.7 km) | 90% |

****minimum safety zone size for brush is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

****minimum safety zone size for timber understory is 1/4-acre (0.1 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV C: Regrowth areas around Jackass Flat have high potential for spotting and fire spread. South of Lost Creek & Sly Creek Reservoirs, heavier fuel loading and ladder fuels could support crown fire. Area of greatest potential for fire spread, with general wind aligning with upslope daytime surface flow. Torching may occur. Plantations burning like chaparral; treat like shrub for ROS, flame length, & potential safety zone size.

DIV D / F: Limited fire spread expected, but area has potential for crown fire due to regrowth and understory ladder fuels. High spotting potential remains. Ponderosa Reservoirs have heavier fuel loading that could support crown fire.

DIV I / M / R / T: Limited fire behavior expected unless a slop or spot establishes. Receptive fine fuel bed near Stringtown, Bloomer Hill, and Cherokee.

AIR OPERATIONS:

Mostly clear.

Mixing height: 8,000 ft. AGL. Transport winds: S 15 mph. Sunrise 0648, Sunset 1911.

SAFETY

Limited visibility may give you a false sense of security. Lookouts are a must especially in thick brushy areas. Use LCES to ensure you know what your fire is doing at all times.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Sierra Foothills Rangeland Forage Production Data

- 40 years of consistent data
- 2019-20 growing season 4th highest total
- 5 seasons of above normal in a row

| 1992-93 | 4696 |
| 1982-83 | 4630 |

https://gacc.nifc.gov/oncc/fuelsFireDanger_Hundred.php <https://www.esrl.noaa.gov/psd/eddi/>

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

TRAFFIC

FIRE BORDERS TWO STATE HIGHWAYS

Watch Out

- Highway 70 remains open for traffic so watch for high speed vehicles
- Roads in the fire area are narrow and steep and civilian traffic is in the area
- Watch for congestion through the fire area as repopulates

Mitigation

- Drive with a high level of Situational Awareness and optimum defensive driving techniques
- Use 'road guards' as necessary to coordinate traffic flows on road systems
- Use warning lights as appropriate when entering highways with fast moving vehicles

FIRE WEAKENED TREES

PREVIOUS SHIFT PERSONNEL CONTINUE TO REPORT ISSUES WITH SNAGS

Watch Out

- Ground cover has burned loosening the stability of the root system
- Oak trees are susceptible to limb fall this time of year as they stressed
- Fire suppression, air drops and dozers can dislodge rocks, logs and boulders

Mitigation

- Remove the hazard if safe to do so
- Flag and report the hazard to personnel
- Be alert while working and driving in hazard area, listen and 'yell out' to others

GENERAL HEALTH

EXHAUSTION MAY COMPROMISE SAFETY!

Watch Out

- Diet can cause chronic feelings of exhaustion
- Arduous work can consume body fluids, electrolytes at higher rates
- Steep terrain and hot dry conditions increase the risk of fatigue and exhaustion

Mitigation

- Eat foods which provide steady energy • limit sugary, fatty, fried and processed foods
- Hydrate-proper hydration prevents fatigue and manage work rest ratio while performing work
- Be on the lookout for signs of exhaustion and lookout for one another

Each Safety Message is designed for a daily Tailgate Safety discussion

EMERGENCY FIRE SUPPRESSION REPAIR PLAN – NORTH COMPLEX WEST ZONE

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas caused by the fire. We cannot upgrade facilities beyond their pre-fire condition. Fire suppression repair shall be applied to mitigate infrastructure damage and natural resource damage.

Infrastructure Damage: Culverts and other watercourse crossings, water sources, trails, road barriers removed for fire access, trash, debris and supplies left by fire suppression activities; miscellaneous.

Natural Resource Damage: Repair of existing problems caused by fire suppression activities (direct effect) to natural resources and to prevent likely future problems such as accelerated erosion caused by rains (indirect effect). The goal is to minimize soil erosion, adverse impacts to water quality, and adverse impacts to protected species of plants and animals

REPAIR GUIDELINES

General: Restore berms and barriers removed for fire control access.

Drop Points/Staging Areas/Safety Zones: New construction - cross drain and abandon (if applicable). Existing - repair to original condition, remove debris resulting from use. Pick up all trash.

Roads: Reshape soil surfaced roads that were used during fire control operations. Roads should be out-sloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.

Firelines: Break apart dozer piles of pushed over trees, vegetation and soil, and spread along tractor roads, tractor fire breaks, or any other areas disturbed during fire suppression activities. Lop and scatter displaced vegetation to a height of less than 30 inches or chip within 100' of a public or unlocked private road or structure. Scatter the lopped material along the fire line. Pull back any excess soil material sidecast along roads or tractor disturbed areas that are located within 100 feet of any watercourse or spring. Install waterbreaks on all constructed or used dozer lines using the following criteria:

| | | | | |
|---|-------|-------|-------|------|
| Fireline and road gradient(%) oak woodland: | 0-10 | 11-25 | 26-50 | >50 |
| Fireline waterbreak spacing: | 150' | 100' | 75' | 50' |
| Road waterbreak spacing: | 300' | 200' | 150' | 100' |
| Fireline and road gradient(%) Timber | :0-10 | 11-25 | 26-50 | >50 |
| Fireline waterbreak spacing: | 100' | 75' | 50' | 25' |
| Road waterbreak spacing: | 200' | 150' | 100' | 75' |

Waterbreaks and/or rolling dips shall be used to reduce the volume and velocity of water by directing it off fire lines as soon as possible at controlled locations. The outfall end of all waterbreaks shall be opened by hand if necessary. Waterbreaks should be located to discharge into natural vegetation. Waterbreaks should cross the fire line at an angle of approximately 45 degrees.

Handlines: Install waterbreaks as needed based on slope and soil erodibility.

All waterbreaks shall be installed diagonally with a minimum cut of 6" into existing grade, and minimum height of 12". Waterbreaks shall be constructed to allow for drainage at the discharge end into non-erodible material.

Slash Piles: Piles within 150' of permanent structures or public roads will be lopped and/or scattered within 18" of the soil surface.

Piles along roads and fences: Lop to fire protection standards to ensure decreased fire risk is obtained. Scatter smaller debris where applicable.

Watercourse Crossings: All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized above the high-water line.

Major watercourse damage, if present, shall be reported to the Fire Suppression Repair Specialist prior to the end of the shift day.

Where fire lines are constructed within 100' of flowing watercourses, slash or straw mulching will be applied. All loose soil must be pulled away from the watercourse and stabilized.

Archaeological or Historic Sites: All potential sites shall be avoided. Contact Incident Archaeologist or the Suppression Repair Specialist.

CAL FIRE

INCIDENT MANAGEMENT TEAM

WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind ect).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and establish Water Conservation as an Management Objective.
- Consider complexity of water use on incidents. Establish a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- Review this check list and brief daily.
