Fire Weather Forecast

FORECAST NO: 11
 PREDICTION FOR: Sunday - Sunday Night
 DATE: September 20th, 2020
 FORECAST ISSUED: 1900 September 19th, 2020

Fire: North Complex West Zone
 UNIT: Plumas/Butte
 Incident Meteorologist (T): Steve Hannah
 Signed: *Steve Hannah* *IMET*

A bit warmer and drier

WEATHER DISCUSSION: The weather pattern remains calm today with terrain winds across the landscape. The winds will follow a standard diurnal pattern of upslope/upvalley from 1100 to 2000 peaking around 1500 during the day and downslope/downvalley from 2100 to 1000 in the morning peaking around 0500. The nighttime winds are expected to be stronger than daytime winds largely due to the longer autumn nights. RH will also follow a diurnal pattern with the minimums 1400-1500 and the maxes just before sunrise at 0400-0500. Steering currents are weak, so smoke will be present and struggle to mix out through the day, mainly meandering around without leaving. No real changes in the weather forecast is expected into early week aside from smoke impacts.

TODAY:

WEATHER: Mostly sunny with smoke and haze.

MAX TEMP:	2000 feet: 75-79°	MIN RH:	2000 feet: 25-29%
	4000 feet: 73-77°		4000 feet: 27-31%

CHC WTG RAIN: 0%	LAL: 1
-------------------------	---------------

WINDS: **2000 feet:** Upslope mid-morning then becoming upvalley 4-6 mph peaking around 1500
4000 feet: Light in the morning becoming southwest 4-6 mph

MIXING HEIGHT: 1500 feet until 1000 and reaching 6000 feet around 1400.

TRANSPORT WIND: Southwest 10 to 15 mph.

VISIBILITY: 2-5 miles.

TONIGHT:

WEATHER: Areas of dense smoke especially in deeper terrain features.

MIN TEMP:	2000 feet: 60-64°	MAX RH:	2000 feet: 50-55%
	4000 feet: 54-58°		4000 feet: 45-50%

CHC WTG RAIN: 0%	LAL: 1
-------------------------	---------------

WINDS: **2000 feet:** Downslope becoming downvalley 6-10 mph peaking around 0500
(20 FEET) **4000 feet:** Downslope becoming downvalley 5-8 mph

MIXING HEIGHT: Decreasing to 1000 feet AGL overnight.

TRANSPORT WIND: Light or Southwest 5 mph.

INVERSION: Moderate temperature inversion developing peaking near sunrise at 0500.

EXTENDED OUTLOOK: Monday through Thursday: Expect steady temperatures with continued terrain driven winds. Humidity minimums will approach 25%, but overnight recoveries will remain moderate. Smoke will become a bigger factor through the week as the valley does not mix out completely each day. This will gradually cause the smoke to become thicker with hazier skies.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 11	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex West Zone	OPERATIONAL PERIOD: 24hr 9/20 (0700-0700)
DATE ISSUED: 9/19/2020	TIME ISSUED: 1900
UNIT: BTU	SIGNED: Jonathan Pangburn, FBAN <i>J.M.P.</i>

INPUTS

WEATHER SUMMARY

****LESS MODERATE****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

Slightly warmer temperatures, lower RH, and potential for wind gust will lead to an increase in fire behavior. Limited potential for isolated torching still exists, with critical fuel moisture and heavy ladder fuels. Overnight winds are steady and stronger downcanyon; this will continue to push the fire toward containment lines and potential for cross-slope and upslope runs toward Forbestown Rd & La Porte Rd.

Probability of ignition decreases overnight with RH recovery up to 50%, but torching continues, especially 2200-0400, despite the humidity increase.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 100-hr dead fuels & ERC at 90th percentile; 1,000-hr dead fuel at 97th percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	5' (1.5 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	65%
Grass/Shrub Mix	5' (1.5 m)	15 ch/hr (0.3 km/hr)	< 1/4 mile (.4 km)	65%
Shrub	13' (3.9 m)	35 ch/hr (0.7 km/hr)	< 1/4 mile (.4 km)	65%
Timber Understory	8' (2.4 m)	10 ch/hr (0.2 km/hr)	< 1/4 mile (.4 km)	65%
Timber Litter	4' (1.2 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	65%

****minimum safety zone size is 1/4-acre (0.1 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV C / D: Areas of regrowth and heavier fuels will resist control, but fire behavior should lesson considerably today. Continue to watch for slops and spots south of South Fork Feather River, into Lost Creek & Sly Creek Reservoirs, south to La Porte Rd, due to heavier fuel loading and ladder fuels that could support torching.

DIV F: Area still has high group torching potential due to regrowth and understory ladder fuels. Spotting potential remains. South of Ponderosa Reservoir has heavier fuel loading that could support crown fire. Watch for channeling in Mosquito Gulch and slope/drainage to Fields Ridge Road.

DIV I / M / R / T: No fire growth expected. Receptive fine fuel bed near Stringtown, Bloomer Hill, and Cherokee could still support a spot or a new start.

AIR OPERATIONS:

Mostly sunny & hazy.

Mixing height: 6,000 ft. AGL. Transport winds: SW 10-15 mph. Sunrise 0650, Sunset 1906.

SAFETY

Fire is behaving as if it were 10 degrees warmer and 10% less RH. Don't rely on overnight RH recovery to limit activity; group torching is expected 2200-0400, especially with steady downcanyon wind.

Short intense fire runs are possible. Make sure you know where your safety zone is, the time it takes to get there, and the size is sufficient for expected heat output with near-record ERCs.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

EMERGENCY FIRE SUPPRESSION REPAIR PLAN – NORTH COMPLEX WEST ZONE

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas caused by the fire. We cannot upgrade facilities beyond their pre-fire condition. Fire suppression repair shall be applied to mitigate infrastructure damage and natural resource damage.

Infrastructure Damage: Culverts and other watercourse crossings, water sources, trails, road barriers removed for fire access, trash, debris and supplies left by fire suppression activities; miscellaneous.

Natural Resource Damage: Repair of existing problems caused by fire suppression activities (direct effect) to natural resources and to prevent likely future problems such as accelerated erosion caused by rains (indirect effect). The goal is to minimize soil erosion, adverse impacts to water quality, and adverse impacts to protected species of plants and animals

REPAIR GUIDELINES

General: Restore berms and barriers removed for fire control access.

Drop Points/Staging Areas/Safety Zones: New construction - cross drain and abandon (if applicable). Existing - repair to original condition, remove debris resulting from use. Pick up all trash.

Roads: Reshape soil surfaced roads that were used during fire control operations. Roads should be out-sloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.

Firelines: Break apart dozer piles of pushed over trees, vegetation and soil, and spread along tractor roads, tractor fire breaks, or any other areas disturbed during fire suppression activities. Lop and scatter displaced vegetation to a height of less than 30 inches or chip within 100' of a public or unlocked private road or structure. Scatter the lopped material along the fire line. Pull back any excess soil material sidecast along roads or tractor disturbed areas that are located within 100 feet of any watercourse or spring. Install waterbreaks on all constructed or used dozer lines using the following criteria:

Fireline and road gradient(%) oak woodland:	0-10	11-25	26-50	>50
Fireline waterbreak spacing:	150'	100'	75'	50'
Road waterbreak spacing:	300'	200'	150'	100'
Fireline and road gradient(%) Timber	0-10	11-25	26-50	>50
Fireline waterbreak spacing:	100'	75'	50'	25'
Road waterbreak spacing:	200'	150'	100'	75'

Waterbreaks and/or rolling dips shall be used to reduce the volume and velocity of water by directing it off fire lines as soon as possible at controlled locations. The outfall end of all waterbreaks shall be opened by hand if necessary. Waterbreaks should be located to discharge into natural vegetation. Waterbreaks should cross the fire line at an angle of approximately 45 degrees.

Handlines: Install waterbreaks as needed based on slope and soil erodibility.

All waterbreaks shall be installed diagonally with a minimum cut of 6" into existing grade, and minimum height of 12". Waterbreaks shall be constructed to allow for drainage at the discharge end into non-erodible material.

Slash Piles: Piles within 150' of permanent structures or public roads will be lopped and/or scattered within 18" of the soil surface.

Piles along roads and fences: Lop to fire protection standards to ensure decreased fire risk is obtained. Scatter smaller debris where applicable.

Watercourse Crossings: All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized above the high-water line.

Major watercourse damage, if present, shall be reported to the Fire Suppression Repair Specialist prior to the end of the shift day.

Where fire lines are constructed within 100' of flowing watercourses, slash or straw mulching will be applied. All loose soil must be pulled away from the watercourse and stabilized.

Archaeological or Historic Sites: All potential sites shall be avoided. Contact Incident Archaeologist or the Suppression Repair Specialist.
