FIRE BEHAVIOR FORECAST

| FORECAST NUMBER: 12 | TYPE OF FIRE: Wildland Fire |
| FIRE NAME: North Complex West Zone | OPERATIONAL PERIOD: 24hr 9/21 (0700-0700) |

| UNIT: BTU | SIGNED: Jonathan Pangburn, FBAN <i>[Signature]</i> |

WEATHER SUMMARY

****PERSISTENT FAIR WEATHER; SMOKE & HAZE****
See Weather Forecast in IAP.

OUTPUTS

GENERAL:

Warm temperatures, moderate RH, and typical diurnal wind will maintain fire behavior: torching potential still exists, with critical fuel moisture and heavy ladder fuels, but not as likely during day hours due to smoke cover. Reduced spotting overnight. Overnight winds are steady and stronger downcanyon; this will continue to push the fire toward western containment lines and potential for cross-slope and upslope runs toward Forbestown Rd & La Porte Rd.

Probability of ignition decreases overnight with RH recovery up to 45%, but torching continues, especially 2300-0300, despite the humidity increase.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. 100-hr dead fuels & ERC at 90th percentile; 1,000-hr dead fuel at 97th percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

| | Max. Flame Length | Max. Rate of Spread | Spotting | Probability of Ignition |
|-------------------|-------------------|----------------------|--------------------|-------------------------|
| Grass | 5' (1.5 m) | 20 ch/hr (0.4 km/hr) | < 1/4 mile (.4 km) | 65% |
| Grass/Shrub Mix | 5' (1.5 m) | 15 ch/hr (0.3 km/hr) | < 1/4 mile (.4 km) | 65% |
| Shrub | 13' (3.9 m) | 35 ch/hr (0.7 km/hr) | < 1/4 mile (.4 km) | 65% |
| Timber Understory | 8' (2.4 m) | 10 ch/hr (0.2 km/hr) | < 1/4 mile (.4 km) | 65% |
| Timber Litter | 4' (1.2 m) | 5 ch/hr (0.1 km/hr) | < 1/4 mile (.4 km) | 65% |

****minimum safety zone size is 1/4-acre (0.1 Ha) for a Strike Team of Engines.**

SPECIFIC:

DIV C / D: Areas of regrowth and heavier fuels will resist control, but fire behavior should lessen considerably today. Continue to watch for slops and spots south of South Fork Feather River, into Lost Creek & Sly Creek Reservoirs, south to La Porte Rd, due to heavier fuel loading and ladder fuels that could support torching.

DIV F: Area still has high group torching potential due to regrowth and understory ladder fuels. Spotting potential remains. South of Ponderosa Reservoir has heavier fuel loading that could support crown fire. Watch for channeling in Mosquito Gulch and slope/drainage to Fields Ridge Road.

DIV I / M / R / T: No fire growth expected.

AIR OPERATIONS:

Mostly sunny & hazy.

Mixing height: 6,000 ft. AGL. Transport winds: SW 10-15 mph. Sunrise 0650, Sunset 1906.

SAFETY

Fire is behaving as if it were 10 degrees warmer and 10% less RH. Don't rely on overnight RH recovery to limit activity; group torching is expected 2200-0400, especially with steady downcanyon wind.

Short intense fire runs are possible. Make sure you know where your safety zone is, the time it takes to get there, and the size is sufficient for expected heat output with near-record ERCs.

Fuels and Fire Behavior Advisory

Northern California Geographic Area

September 7, 2020

Subject: Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

Discussion: Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

Difference from normal conditions: Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cfw/>.

Area of Concern: All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

EMERGENCY FIRE SUPPRESSION REPAIR PLAN – NORTH COMPLEX WEST ZONE

Fire Suppression Repair is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas caused by the fire. We cannot upgrade facilities beyond their pre-fire condition. Fire suppression repair shall be applied to mitigate infrastructure damage and natural resource damage.

Infrastructure Damage: Culverts and other watercourse crossings, water sources, trails, road barriers removed for fire access, trash, debris and supplies left by fire suppression activities; miscellaneous.

Natural Resource Damage: Repair of existing problems caused by fire suppression activities (direct effect) to natural resources and to prevent likely future problems such as accelerated erosion caused by rains (indirect effect). The goal is to minimize soil erosion, adverse impacts to water quality, and adverse impacts to protected species of plants and animals

REPAIR GUIDELINES

General: Restore berms and barriers removed for fire control access.

Drop Points/Staging Areas/Safety Zones: New construction - cross drain and abandon (if applicable). Existing - repair to original condition, remove debris resulting from use. Pick up all trash.

Roads: Reshape soil surfaced roads that were used during fire control operations. Roads should be out-sloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.

Firelines: Break apart dozer piles of pushed over trees, vegetation and soil, and spread along tractor roads, tractor fire breaks, or any other areas disturbed during fire suppression activities. Lop and scatter displaced vegetation to a height of less than 30 inches or chip within 100' of a public or unlocked private road or structure. Scatter the lopped material along the fire line. Pull back any excess soil material sidecast along roads or tractor disturbed areas that are located within 100 feet of any watercourse or spring. Install waterbreaks on all constructed or used dozer lines using the following criteria:

| | | | | |
|---|-------|-------|-------|------|
| Fireline and road gradient(%) oak woodland: | 0-10 | 11-25 | 26-50 | >50 |
| Fireline waterbreak spacing: | 150' | 100' | 75' | 50' |
| Road waterbreak spacing: | 300' | 200' | 150' | 100' |
| Fireline and road gradient(%) Timber | :0-10 | 11-25 | 26-50 | >50 |
| Fireline waterbreak spacing: | 100' | 75' | 50' | 25' |
| Road waterbreak spacing: | 200' | 150' | 100' | 75' |

Waterbreaks and/or rolling dips shall be used to reduce the volume and velocity of water by directing it off fire lines as soon as possible at controlled locations. The outfall end of all waterbreaks shall be opened by hand if necessary. Waterbreaks should be located to discharge into natural vegetation. Waterbreaks should cross the fire line at an angle of approximately 45 degrees.

Handlines: Install waterbreaks as needed based on slope and soil erodibility.

All waterbreaks shall be installed diagonally with a minimum cut of 6" into existing grade, and minimum height of 12". Waterbreaks shall be constructed to allow for drainage at the discharge end into non-erodible material.

Slash Piles: Piles within 150' of permanent structures or public roads will be lopped and/or scattered within 18" of the soil surface.

Piles along roads and fences: Lop to fire protection standards to ensure decreased fire risk is obtained. Scatter smaller debris where applicable.

Watercourse Crossings: All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized above the high-water line.

Major watercourse damage, if present, shall be reported to the Fire Suppression Repair Specialist prior to the end of the shift day.

Where fire lines are constructed within 100' of flowing watercourses, slash or straw mulching will be applied. All loose soil must be pulled away from the watercourse and stabilized.

Archaeological or Historic Sites: All potential sites shall be avoided. Contact Incident Archaeologist or the Suppression Repair Specialist.

TRAINING SPECIALIST

CHECK-IN

A Training Specialist is available for trainees on the incident.
