# Fire Weather Forecast

FORECAST NO: 16  
PREDICTION FOR: Friday-Friday Night  
DATE: September 25th, 2020  
FORECAST ISSUED: 1900 September 24<sup>th</sup>, 2020

Fire: North Complex West Zone  
UNIT: Plumas/Butte  
Incident Meteorologist: Kari Fleegel  
Signed: *Kari Fleegel*

## **FIRE WEATHER WATCH from 1100 Saturday until 0800 Monday**

**WEATHER DISCUSSION:** Today will be our last day of near-average temperatures, generally light winds, and relative humidity values staying above 30 percent. Upper level flow will become more west to east, helping to moderate temperatures and humidity. Winds will again follow our typical diurnal pattern of upslope/upvalley from around 1100 to 2200, peaking around 1500. Winds will switch to downslope/downvalley from 2100 to 1000 in the morning, peaking around 0500. Watch for exposed ridges, and locations where down canyon winds can funnel and become much stronger.

### **TODAY:**

**WEATHER:** Mostly sunny. Patchy smoke and haze.

**MAX TEMP:** 72-78°                      **MIN RH:** 30-36%

**CHC WTG RAIN:** 0%                      **LAL:** 1

**WINDS:** Upslope mid-morning then becoming upvalley 3-6 mph peaking around 1500  
**Higher Elevations/Ridges:** Light in the morning becoming out of the west-southwest 4-8 mph

**MIXING HEIGHT:** 1500 feet until 1000 and reaching 4500 feet around 1400.

**TRANSPORT WIND:** W 5-10 mph.

**VISIBILITY:** 2-6 miles.

### **TONIGHT:**

**WEATHER:** Mostly clear. Patchy smoke becoming dense in deeper terrain features.

**MIN TEMP:** 60-65°                      **MAX RH:** 2000 feet: 47-53%

**CHC WTG RAIN:** 0%                      **LAL:** 1

**WINDS:** Downslope becoming downvalley 8-13 mph peaking around 0500.  
**(20 FEET) Higher Elevations/Ridges:** North-northeast 10-15 mph. Gusts up to 20 mph near daybreak.

**MIXING HEIGHT:** Decreasing to around 500 feet AGL overnight.

**TRANSPORT WIND:** Light or northeast 5-10 mph.

**INVERSION:** Moderate temperature inversion developing, and peaking near sunrise at 0500.

**EXTENDED OUTLOOK: Saturday through Tuesday:** Breezy winds, and much warmer and drier air will be the theme as a large upper ridge of high pressure builds across the western states. Daytime relative humidity values will fall into the 20 percent range Saturday and Sunday, and into the teens early next week. Winds out of the north to northeast will be strongest overnight into the early morning hours, funneling down our elongated northeast to southwest oriented drainages. Expect winds will increase overnight Saturday night into Sunday morning, becoming out of the northeast 13-18 mph with gusts around 30 mph. The winds will relax a little Saturday, and become gusty again Sunday night. Due to the critical fire weather conditions, a **Fire Weather Watch has been issued for late Saturday morning into Monday Morning.**

## FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 16	TYPE OF FIRE: Wildland Fire
FIRE NAME: North Complex West Zone	OPERATIONAL PERIOD: 24hr 9/25 (0700-0700)
DATE ISSUED: 9/24/2020	TIME ISSUED: 1900
UNIT: BTU	SIGNED: Jonathan Pangburn, FBAN 

### INPUTS

#### WEATHER SUMMARY

**\*\*LOWER TEMP, HIGHER RH, GOOD OVERNIGHT RECOVERY\*\***

See Weather Forecast in IAP.

### OUTPUTS

#### GENERAL:

Continued smoldering fire behavior today with higher RH. Torching potential still exists, with critical fuel moisture and heavy ladder fuels, but is greatly reduced. Continued reduced ignition overnight, but ember cast still possible with steady downcanyon wind.

Probability of ignition decreases to about 20-25% overnight with recovery up to 55% RH.

NOPS has issued a fuels and fire behavior advisory for elevated ERCs & dry fuels. ERC at 90<sup>th</sup> percentile, 100-hr dead fuel near average, and 1,000-hr dead fuel at 97<sup>th</sup> percentile. Severe Drought conditions.

In the absence of weather conditions outside the forecast or extreme fire behavior conditions expect:

	Max. Flame Length	Max. Rate of Spread	Spotting	Probability of Ignition
Grass	4' (1.2 m)	20 ch/hr (0.4 km/hr)	< 1/4 mile (.4 km)	55%
Grass/Shrub Mix	5' (1.5 m)	15 ch/hr (0.3 km/hr)	< 1/4 mile (.4 km)	55%
Shrub	12' (3.6 m)	30 ch/hr (0.6 km/hr)	< 1/4 mile (.4 km)	55%
Timber Understory	8' (2.4 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	55%
Timber Litter	4' (1.2 m)	5 ch/hr (0.1 km/hr)	< 1/4 mile (.4 km)	55%

**\*\*minimum safety zone size for brush/plantation is 1/2-acre (0.2 Ha) for a Strike Team of Engines.**

**\*\*minimum safety zone size for timber understory is 1/4-acre (0.1 Ha) for a Strike Team of Engines.**

#### SPECIFIC:

**DIV C:** Little to no fire activity anticipated with fire smoldering near Lost Creek. Substantial fuel loading with ladder fuels in Bear Gulch and around Mooreville Ridge Rd.

**DIV D:** Little to no fire activity expected. Extensive fuel loading remains a concern for spots and slops.

**DIV F:** Squaw Flat Rd remains area of greatest potential. Sunset Hill to Robinson Mills could see fire growth if any spots establish. Watch Lower Forbestown Rd to Rebbie Way for overnight winds on ridgeline and spotting potential.

**DIV I / M / R / T:** No fire growth expected.

#### AIR OPERATIONS:

Mostly sunny with patchy smoke.

Mixing height: 4,500 ft. AGL. Transport winds: W 5-10 mph. Sunrise 0656, Sunset 1856.

### SAFETY

Don't fall into the "same old – same old" trap. Fire behavior can change in an instant. **STAY ALERT!**

Expect strongest wind gusts overnight toward daybreak. This is a safety issue for potential spotting, as well as snags, burned out roots, and unstable trees.

# Fuels and Fire Behavior Advisory

## Northern California Geographic Area

September 7, 2020

**Subject:** Extended high temperatures continues to rapidly dry out an above normal live fuel load and dead fuels across Northern California. Extreme fire behavior and rapid to dangerous rates of spread has occurred during enhanced breezy periods accompanied with low humidity in areas clear of smoke. Extreme fire behavior will become more common as the fuel drying continues in September.

**Discussion:** Weeks of record temperatures in August and early September coupled with limited precipitation has been expanding extreme to severe drought conditions across much of the Geographic Area. All indications show these drought conditions persisting through September. The thunderstorm event of August 16-17 produced much lightning with limited rainfall that only lowered fire danger for a very brief period. Fires have recently shown or exhibited rapid or dangerous spread rates or generate extreme fire behavior once the any cap of smoke lifts out. There is a high potential for extreme fire behavior to persist under a wider range of conditions as fuel continues to dry and gusty north to northeast foehn winds events become more frequent.

**Difference from normal conditions:** Winter precipitation was below to well below normal with 55% of normal mountain snowpack. Late spring moisture during the heart of the low-mid elevation growing season led to **above normal fine fuel loading**. Typical dry summer conditions coupled with above normal temperatures has dramatically effected fuel dryness and fire danger indices. ERC's will generally range between 90th to 97th percentile the next 2 weeks with some PSA's experiencing seasonal record values. This time of year, live brush has typically low moisture levels due to normal seasonal drying but recently sampled live brush are at the at historic lows for many sampling sites.

#### Concerns to Firefighters and the Public:

- Cured fine fuel loading below 3,000' elevation is above normal, exhibiting very rapid fire spread.
- Firefighters should be prepared for potential extreme fire behavior and dangerous or otherwise rapid rates of spread at any time of day, especially during foehn wind events.
- The potential for extreme fire activity will be likely to continue until enough precipitation occurs to significantly increase fuel moisture.
- Rapid rates of spread could have a significant impact on public safety and make evacuations difficult.

#### Mitigation Measures:

- All local and visiting firefighters need to remain aware of current and expected weather and burning conditions and consider such information while making strategic and tactical decisions.
- Employ LCES principles (Lookouts, Communications, Escape Routes, Safety Zones).
- Review current fire potential products from Predictive Services at <https://gacc.nifc.gov/oncc/predictive/weather/index.htm> or potential Red Flag conditions from the National Weather Service and weather at <https://www.wrh.noaa.gov/fire2/cafw/>.

**Area of Concern:** All areas across Northern California could see very active fire behavior. The PSA numbers associated with those areas are NC01, NC02, NC03A, NC03B, NC04, NC05, NC06, NC07 and NC08.

# SAFETY MESSAGE

## NORTH COMPLEX, WEST ZONE

20.CA.BTU.010751 - September 25, 2020 - 0700 TO 0700

### LEADERSHIP

THE FOUNDATION TO SAFETY

#### Watch Out:

- Sacrificing firefighter safety for the sake of a task or goal
- Omitting basic firefighting safety guidelines
- Breakdown in communications, the plan is not clear and understood

#### Mitigation

- Leaders hold themselves accountable to doing the right thing and make their firefighters well being and safety the first priority
- Use checklist and reassess your situation and tactics regularly, and communicate your adjustments
- Validate everyone receives a briefing and their role in the plan is clear

### FIRE WEAKENED TREES

WIDOW MAKERS, SNAGS, and WEAKENED OAKS

#### Watch Out

- Areas having burned several days ago or near the beginning of this incident may have standing snags ready to fall
- Trees may fall without warning, afternoon/evening winds may increase potential
- Drought conditions have created snag patches in areas of all fires

#### Mitigation

- Scout line prior to engagement in areas with drought ridden and bug kill trees, scout areas in daylight when possible
- Disengage in areas with weak and fire weakened trees when appropriate
- Flag hazard trees, prevent access as possible, and notify falling modules to mitigate hazard trees

### DEFENSIVE DRIVING

REDUCE YOUR EXPOSURE

- SLOW DOWN AND ANTICIPATE:
  - ✓ Drive safely for the conditions of the road
  - ✓ Expect that someone will be in the road around the next turn
  - ✓ Anticipate what other drivers may do

## EMERGENCY FIRE SUPPRESSION REPAIR PLAN – NORTH COMPLEX WEST ZONE

**Fire Suppression Repair** is the repair of damage caused directly from fire suppression activities. It is not the repair of infrastructure or rehabilitation of burned areas caused by the fire. We cannot upgrade facilities beyond their pre-fire condition. Fire suppression repair shall be applied to mitigate infrastructure damage and natural resource damage.

**Infrastructure Damage:** Culverts and other watercourse crossings, water sources, trails, road barriers removed for fire access, trash, debris and supplies left by fire suppression activities; miscellaneous.

**Natural Resource Damage:** Repair of existing problems caused by fire suppression activities (direct effect) to natural resources and to prevent likely future problems such as accelerated erosion caused by rains (indirect effect). The goal is to minimize soil erosion, adverse impacts to water quality, and adverse impacts to protected species of plants and animals

### REPAIR GUIDELINES

**General:** Restore berms and barriers removed for fire control access.

**Drop Points/Staging Areas/Safety Zones:** New construction - cross drain and abandon (if applicable). Existing - repair to original condition, remove debris resulting from use. Pick up all trash.

**Roads:** Reshape soil surfaced roads that were used during fire control operations. Roads should be out-sloped with rolling dips where degradation of the road prism has resulted from fire control operations. Clean out culvert inlets and outlets as needed. Report any damaged culverts to the Fire Suppression Repair Specialist for specific repair guidance. Breach berms, where appropriate, to facilitate drainage.

**Firelines:** Break apart dozer piles of pushed over trees, vegetation and soil, and spread along tractor roads, tractor fire breaks, or any other areas disturbed during fire suppression activities. Lop and scatter displaced vegetation to a height of less than 30 inches or chip within 100' of a public or unlocked private road or structure. Scatter the lopped material along the fire line. Pull back any excess soil material sidecast along roads or tractor disturbed areas that are located within 100 feet of any watercourse or spring. Install waterbreaks on all constructed or used dozer lines using the following criteria:

Fireline and road gradient(%) oak woodland:	0-10	11-25	26-50	>50
Fireline waterbreak spacing:	150'	100'	75'	50'
Road waterbreak spacing:	300'	200'	150'	100'
Fireline and road gradient(%) Timber	0-10	11-25	26-50	>50
Fireline waterbreak spacing:	100'	75'	50'	25'
Road waterbreak spacing:	200'	150'	100'	75'

Waterbreaks and/or rolling dips shall be used to reduce the volume and velocity of water by directing it off fire lines as soon as possible at controlled locations. The outfall end of all waterbreaks shall be opened by hand if necessary. Waterbreaks should be located to discharge into natural vegetation. Waterbreaks should cross the fire line at an angle of approximately 45 degrees.

**Handlines:** Install waterbreaks as needed based on slope and soil erodibility.

All waterbreaks shall be installed diagonally with a minimum cut of 6" into existing grade, and minimum height of 12". Waterbreaks shall be constructed to allow for drainage at the discharge end into non-erodible material.

**Slash Piles:** Piles within 150' of permanent structures or public roads will be lopped and/or scattered within 18" of the soil surface.

Piles along roads and fences: Lop to fire protection standards to ensure decreased fire risk is obtained. Scatter smaller debris where applicable.

**Watercourse Crossings:** All slash, soil, and debris deposited into watercourses resulting from fire suppression activities shall be removed and stabilized above the high-water line.

Major watercourse damage, if present, shall be reported to the Fire Suppression Repair Specialist prior to the end of the shift day.

Where fire lines are constructed within 100' of flowing watercourses, slash or straw mulching will be applied. All loose soil must be pulled away from the watercourse and stabilized.

**Archaeological or Historic Sites:** All potential sites shall be avoided. Contact Incident Archaeologist or the Suppression Repair Specialist.
