Dixie Fire East Zone Weather Forecast

FORECAST NO: 11
Prediction For: Day/Night Shift
Date: 8/2/2021 (Mon) – 8/3/2021 (Tue)
Forecast Issued: 8/1/2021 2005 Local Hours

Name of the Fire: Dixie Fire East Zone
Unit: Plumas National Forest
Incident Meteorologist: Lamont Bain
Signed: *Anthony Lamont Bain*

*****A near critical to critical fire weather threat expected thru mid-week across Dixie East Zone*****

WEATHER DISCUSSION: Near single digit minimum relative humidity are forecast along with strong westerly winds across the Dixie East Zone and Evans Fires. Instability will support tall columns through at least Wednesday. Monday and Tuesday will feature the near-critical fire weather threat with RH in the low teens and wind gusts near 25 mph. Wednesday has the *best potential* to be a critical fire weather day as afternoon single digit humidity values and wind gusts near 30 mph are forecast. A near critical fire weather threat will be possible thereafter.

TODAY: Morning patchy dense smoke will yield to mostly sunny, hot and very breezy conditions. The strongest winds will be across west aspects in addition to southwest-northeast oriented drainages. General west wind gusts to 25 mph (possibly greater) are forecast.

Max Temperatures:	Valley-2000 FT: 95-100°	2000-4000 FT: 94-99°	4000-6000 FT: 88-93°
Minimum Relative Humidity:	Valley-2000 FT: 15-20%	2000-4000 FT: 13-18%	4000-6000 FT: 13-18%

Rush Creek (DIV N and DIV O): SW to W winds with speeds between 10 and 17 mph. Gusts to near 25 mph are anticipated with greater gusts along aligned drainages. The time period that will offer the strongest winds will be mid to late afternoon. Afternoon humidity will fall down into the low to mid-teens.

Bucks Lake – Meadow Valley Areas: SSW to WSW at 9 to 16 mph gusts to 25 mph. Stronger gusts are possible across the more exposed regions of Bucks Lake and into Meadow Valley. Afternoon humidity values will fall down to near 13% in many locations.

Evans Fire: W 5 to 12 mph with gusts to 18 mph at mid-slope and into valley. Wind gusts to near 23 mph along the ridgeline. Relative humidity will range between 13-15%.

Stability: Inversion lifting around 1200-1300 and becoming unstable with tall smoke columns possible in the late morning/afternoon.

CHANCE OF RAIN: 0% **LAL:** 1 **TRANSPORT WINDS:** Becoming southerly at 5 to 15 mph.

TONIGHT: The poor overnight humidity trend will continue with higher elevations not seeing max nighttime RH greater than 40%. Winds will diminish at lower elevations, but may remain elevated mid-slope and higher.

Min Temperatures:	Valley-2000 FT: 48-53°	2000-4000 FT: 65-70°	4000-6000 FT: 65-70°
Relative Humidity Recovery:	Valley-2000 FT: 40-50%	2000-4000 FT: 30-40%	4000-6000 FT: 30-40%

Rush Creek (DIV N and DIV O): SW winds between 4 and 9 mph with gusts to near 12 mph becoming down-valley flow. Downslope/down-valley winds (E to NNE) will likely fall into the 3 to 8 mph range with gusts to near 10 mph.

Bucks Lake – Meadow Valley Areas: For areas west of the Burton Ridge...largely downslope NE to ESE winds are anticipated with speeds between 3 and 8 mph. A few gusts to near 10 mph should be expected. For areas toward Meadow Valley winds will transition to more southerly and potentially southeasterly with 2 to 6 mph winds. A gust to near 8 mph will be possible. Winds across the most sheltered portions of Meadow Valley may become calm.

Evans Fire: WSW winds will become more northerly this evening with downslope/down-canyon flow likely by midnight. Valley winds may become northerly through the night, but speeds will likely fall below 5 mph. At mid-slope, ESE to NE winds are anticipated with speeds remaining elevated in the 5 to 8 mph range. Along the ridgeline, southerly winds are anticipated around 5 to 8 mph. A gust to near 12 mph cannot be ruled out.

Stability: Inversion setting in around 2200-2300. Smoke likely becoming trapped beneath inversion in valleys.

CHANCE OF RAIN: 0% **LAL:** 1 **TRANSPORT WINDS:** Becoming calm by 2400 hours.

EXTENDED OUTLOOK: *The primary concern in the extended outlook will be for an increasingly likely critical fire weather threat across the incident area (east zone) Tuesday and Wednesday.* Winds will ramp up through mid-week with the strongest winds and lowest afternoon RH expected on Wednesday afternoon. Winds may gust as high as 30 mph along aligned drainages and ridgelines. Afternoon humidity will approach the single digits with overnight humidity recovery near or below 30%.

WEATHER SUMMARY: Hot, Dry, and Windy with Clearing and Instability 1100-1300 *Critical fire weather threat*****
Temps: Day 90-99 Night 65-70
RH: Day 13-18% Night 30-40%
Winds: Day Ridges W/SW 10-18 gusts to 25mph Night Ridges 2200 N/NE/E 3-8mph gusts to 10 becoming light variable downslope at 0200
Fuels: ERC's will remain at or above the 97th percentile. All fuels are receptive to burn.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Hot, dry, and windy weather. Where wind and slope align expect the potential for extreme fire behavior to include sustained crown runs and long-range spotting (1mile+). In general, spotting will be less than ¼ mile and from rollout. Fire will remain active under the smoke. Watch for fire whirl development at intersecting drainages and on the lee side of any large column.

The fire will remain active at night along ridge tops and in canyon bottoms that align with the down canyon winds. All fuels are available to burn.

Increased clearing and ventilation will increase fire activity in the afternoon.

We have transitioned to a hot, dry, and breezy trend, the same conditions were present when the fire started.

SPECIFIC:

East Zone:

Branch XX: The fire will continue to impact the HWY 70/89 corridors and threaten structures. Expect very active fire behavior and challenges to containment lines. Unburned areas inside the main perimeter will continue to burn out, interior flare ups are likely. Potential still exists for fire to threaten structures in Rush Creek and on Caribou road. ***Fire is established on both sides of HWY 89. Winds have been observed to battle up and down canyon making fire whirls and cross canyon spotting probable***.

XXIII: Active patrol for spot fires is necessary. If the fire spots out of existing lines, expect challenges to containment. Unburned areas inside the main perimeter will continue to burn out, interior flare ups are likely. *** Line construction in Montgomery Creek has been successful, however be on the look out for spots.***

Branch XXV: Expect active flanking and head fire runs along the ridges. The fire will continue to back and flank into the valley. If fire becomes established east of Buck's Lake expect wind aligned runs with rapid rates of spread to the east. As the fire moves east it will burn into difficult terrain and align with west facing slopes. Direct attack has been challenging, expect this to continue. General westerly flow will challenge north/south running containment lines. ***Wind will test containment lines***.

Evans Fire: Minimal forward progression is forecasted unless strong winds affect the fire area. Fuels in the Moonlight burn scar are sparse and spread is highly dependent on wind. Jackpots of heavy fuels will burn intensely.

All Branches: ***If fire gets established outside of containment lines, expect challenges to containment. Spotting has been a problem across the fire and will continue.***

AIR OPERATIONS: Smoke will limit air operations to the north and east sides of the fire area.

SAFETY

- Heavy smoke will impair visibility for lookouts.
- Roads will be impacted by roll out debris and falling snags in any burn area.
- Smoke impacts to powerlines, review powerline safety in the IRPG.
- Unburned fuel between you and the fire.

RESOURCE ADVISOR MESSAGE

Reporting of Cultural Sites

- Do not use the radio. Looters listen to our frequencies and will note where you find things.
- Grab a GPS point, bump it up the chain of command or directly inform a Resource Advisor on the line or in camp.

Stay Out!

- READs will be using flagging for areas to avoid suppression activities. Strip of red/black flagging.
- For more information, please consult with a READ.

Food & Wildlife

- Throwing away and storing food in proper containers can keep wildlife off the line which prevents encounters with firefighters as well as future harm to the animals.

Riparian Areas

- Meadows are natural barriers. Tie the line to them, not through them. If line is needed, go around and outside of the meadow to avoid damage.
- Stream and creeks will not be used as line. If needing to cross, minimize damage (i.e. on a dozer lift the blade and only track over) to prevent post-fire stability issues. Do not push or cut line through or along them.

Water Drafting Sites

- Access the water source while trying your best to minimize damage to the soil and vegetation.
- If using a portable pump, make sure there is a spill kit and absorption pads to catch any accidental spills.
- Place portable pumps as far away as you can from the water source. Use screens on the intakes.
- Store fuel cans away from the water source and on a flat surface.

Working in the Wilderness

- Follow MIST for suppression actions.
- Utilize system trails as much as possible for travel and/or handline.
- Consult with READs for spike camps, helispots, and sling sites locations.
- Practice “Leave No Trace” as much as possible.
- Work with READs to minimize visual impacts to wilderness areas when possible.

Suppression Repair

- Utilize and coordinate with READs when implementing suppression repair plan.
- READs will determine when a line is completed by “approving” the line verbally and/or in ArcGIS Collector.
- Where the use of waterbars are applicable, see figure 1 for a visual bird’s eye view. Questions? Ask a READ.

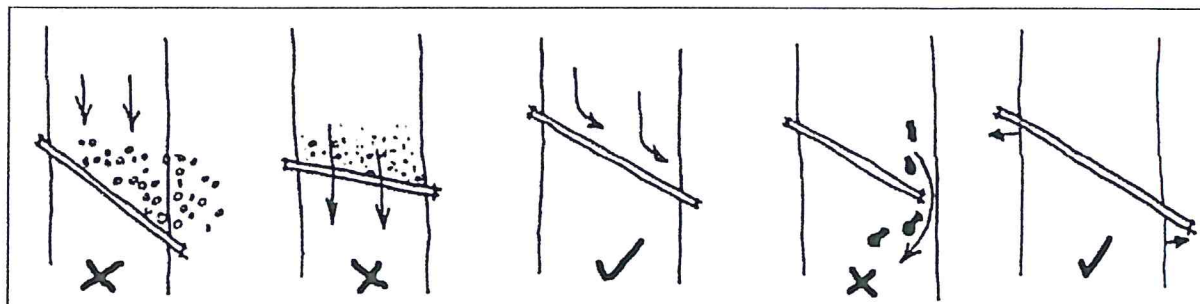

Figure 1 – Bird’s eye view of water bars that are acceptable vs. unacceptable
