# Dixie West Zone Fire Weather Forecast

**Forecast Number:** 30  
**Sectors:** Lassen/Westwood  
**Shift Date:** Monday, August 16<sup>th</sup> 2021

**Incident Meteorologist:** Joe Goudsward  
*/s/ Joseph Goudsward*  
Forecast Issued: 1800 August 15<sup>th</sup>, 2021

### WEATHER DISCUSSION:

The upper level high pressure system that been the dominant weather feature of late has been compressed to the south as an upper level trough of low pressure is expected to move on shore later this afternoon. This will put the incident in a predominant SW flow aloft allowing for much better ventilation. This pattern change will also result in gusty southwest winds developing and when combined with warm temperatures and low humidity, could lead to plume dominated fires and rapid rates of spread. Winds may gust in excess of 30 mph for several hours Monday afternoon and likely longer than that along the ridge tops and any exposed slope. If winds align properly with topography, local winds could be stronger. The winds will slacken off tonight but return late Tuesday morning with red flag conditions redeveloping. A wind shift to the northeast is expected Tuesday night with breezy conditions through a good part of the night.

### \*\*\*LOCAL RED FLAG WARNNIG IN EFFECT FROM 3 PM MONDAY TO 10 PM TUESDAY\*\*\*

**WEATHER FORECAST MONDAY:** Smoke and haze in the morning, smoke will thin considerably in the afternoon.

**Slope/Valley:** Terrain driven winds early, becoming west to southwest by early afternoon and increasing to 10-20 mph with gusts of 30 mph.

**CHANCE OF THUNDERSTORMS:** 0% - LAL: 1 - Haines Index: 5

**STABILITY/INVERSION:** Morning inversion decreasing by 1300 hours. Ventilation will improve dramatically.

**WEATHER FORECAST MONDAY NIGHT:** Clear. Areas of smoke and haze.

   **Mid Slopes:**    Max: 29-35 %  
   **Slope/Valley:** Max: 45-51 %

**20 FT WINDS:** **Ridge Top:** Southwest 10-20 mph.  
**Slope/Valley:** West to southwest 12-20 mph with gusts up to 30 mph in the evening. Becoming downslope/down-valley 3-6 mph by morning. Winds will likely stay elevated on exposed slopes.

**CHANCE OF THUNDERSTORMS:** 0% - LAL: 1 - Haines Index: 5

**STABILITY/INVERSION:** Weak inversion developing after midnight with poor dispersion

**EXTENDED OUTLOOK:** Gusty winds will redevelop late Tuesday morning as a dry cold front moves through. Winds could gust as high as 40 mph with low humidity. A wind shift is expected Tuesday night and into Wednesday with breezy conditions continuing. A dry west to southwest flow is expected after Wednesday.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER:</b> 22	<b>TYPE OF FIRE:</b> Wildfire
<b>FIRE NAME:</b> Dixie – West Zone	<b>OPERATIONAL PERIOD:</b> 8/16/21 – 8/17/21 0700-0700
<b>DATE ISSUED:</b> 8/15/21	<b>TIME ISSUED:</b> 2000
<b>UNIT:</b> BTU – Butte Unit	<b>SIGNED:</b> <i>Brian Newman</i> <b>Typed/printed:</b> Brian Newman FBAN

### INPUTS

**WEATHER SUMMARY:**

**\*\*\*\*RED FLAG WARNING TODAY!\*\*\*\***

Hot, dry and windy conditions will be over the fire today, with a significant increase in winds in the afternoon. Temperatures will be in the upper 80's to upper 90's with minimum humidity dropping to 10 to 17% during the day. Winds will be light and variable in the morning, shifting to the Southwest 15-25 mph gusting to **35 mph** in the afternoon. Overnight the temperatures will be in the upper 40's to upper 50's with humidity recovery at 34 - 51%, except 29-25% in the mid slope thermal belt areas. Winds overnight will continue from the Southwest at 12-20mph with 30 mph gusts until early morning hours.

### OUTPUTS

**FIRE BEHAVIOR**

**GENERAL:** **\*\*\*FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA\*\*\***

Smoke will be thick over the fire area to start the day, but should begin to thin around mid-day due to winds beginning to pick up. Expect fire behavior activity to increase with this wind change. Exceptionally dry timber stands are very receptive to spotting, and can contribute to large fire growth. The probability of ignition will be around 60% under the smoke cover, and 80-90% in more clear areas. Spotting distances of ½ to 1 mile are possible in topographic favored areas and any downwind locations, with longer range spotting possible under higher wind conditions. Dramatic increase in afternoon wind speeds will result in rapid fire growth, and will result in column development and possible plume dominated activity.

**ERC's at record levels above 97<sup>th</sup> percentile!!**

**SPECIFIC:**

**Butte Sector:** Smoldering material will continue to burnout, especially in the stump holes and large dead and down. Minimal heat exists in the sector, expect this to continue as mopup and patrol continues.

**Lassen Sector:** Fire progression is primarily fuel and slope driven, but expect short intense runs and plume development in areas where fuel, winds, and topography align. Fire activity may increase quickly when smoke thins and surface winds increase in the afternoon. Rugged terrain will channel winds and increase the probability of ember cast and spotting, especially in upper elevations or thinner tree stands. The down canyon winds overnight will be lighter overall, but will be enhanced by topographic features and outflow conditions.

**Westwood Sector:** Fire activity in the Westwood sector and perimeter divisions will be primarily driven by topography and fuels with localized light winds causing short range spotting to be possible. Interior heat continues to show in the rugged terrain, but should not pose threats to control lines.

**Clear Branch/Diamond Branch:** Fire activity should be moderate to start the shift, but will increase quickly as the wind exposed slopes begins to experience the forecasted increase in winds. As the smoke clears in the afternoon and if fire becomes established in heavy pockets of fuel in favored topographic features, expect short intense runs and plume development. Wind and fire alignment with Willard creek and the Susan river drainages can result in large fire growth. Spot fires can become established in the heavy dead and down fuels, and contribute to higher spread rates.

### AIR OPERATIONS

Air operations will be limited today in the morning, but as the smoke clears throughout the day, opportunities to utilize aircraft will become available.

### SAFETY

- Short intense fire runs are possible. Make sure you know where your safety zone is at and the time it takes to get there.
- Watch for spot fires and fire in down-slope position.

# Fuels and Fire Behavior Advisory

## Northern California

August 2, 2021 to August 16, 2021

**Subject:** Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

**Discussion:** Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

**Difference from normal conditions:** Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify thorough out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

### Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97<sup>th</sup> percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

### Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

**Area of Concern:** Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

We do not want you or any other resources to have unnecessary delays. Please adhere to your scheduled demobilization time.

### BE PREPARED FOR A RE-ASSIGNMENT

There may be other incidents in the state that are in need of resources. There is a possibility that some of the resources released from this incident will be immediately assigned to another one. Please make sure you are properly supplied, rested, and nourished while waiting for your designated demobilization time.

### BE THOROUGH AND EFFICIENT

Demobilization begins and ends at the Demobilization Unit. Please follow the instructions given to you when starting the demobilization process. Returning to the Demobilization Unit with a complete and accurate Demobilization Check-Out (ICS-221) form will help prevent any unnecessary delays and ensure you are shown as available for future assignments. Unforeseen delays can occur during the demobilization process, such as mechanical issues discovered while at Ground Support. Plan to visit the Time Unit towards the end of the demobilization process in order to provide an accurate accounting of your time.

## Today's Feature: Historic Lassen Emigrant Trail

- This emigrant trail experienced the most use from 1848-1851 by settlers seeking a new life and many intended to strike riches in the California mining operations.
- Peter Lassen established this route breaking off from the Applegate Trail in order to lead settlers to his rancho (Benton City) near Vina CA to increase property values.
- The Lassen Trail quickly proved to be extremely difficult to navigate. It was known as the "Death Route." The Nobles Emigrant Trail established in 1852 quickly became the preferred route.
