Dixie West Zone Fire Weather Forecast

Forecast Number: 31
Sectors: Lassen/Westwood
Shift Date: Tuesday, August 17th 2021

Incident Meteorologist: Joe Goudsward
/s/ Joseph Goudsward
Forecast Issued: 1800 August 16th, 2021

WEATHER DISCUSSION:

A critical weather day is forecast for the incident with a red flag warning in effect through 11 PM for gusty winds and low humidity. The upper level high that dominated for the past several days has been replaced by a fairly potent upper level trough of low pressure. Winds will increase this morning and become stronger and gustier as a dry cold front moves across the area. Winds may gust to 35 to 40 mph this afternoon and evening but could be higher on ridge tops, on exposed slopes and where topography and the winds align properly. The aforementioned cold front is expected to cross the incident during the evening hours with winds turning northwest and eventually northeast by midnight. While winds will slacken after the frontal passage, they are expected to remain breezy at 10 to 15 mph with higher gusts through the night. Recovery will be poor, especially along the mid-slopes. Breezy east/northeast winds will continue on Wednesday.

OUTPUTS

FIRE BEHAVIOR

GENERAL: *****FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA*****

A Smoke layer will be over the fire area to start the day, but will begin to thin around mid-day due to winds increasing. Expect fire behavior activity to increase with this wind change. Exceptionally dry timber stands are very receptive to spotting, and can contribute to large fire growth. The probability of ignition will be around 70% under the smoke cover, and 90 to 100% in clear areas. Spotting distances of ½ to 1 mile are possible in topographic favored areas and any downwind locations, with longer range spotting possible under higher wind conditions. Dramatic increase in afternoon wind speeds will result in rapid fire growth, and will result in column development and possible plume dominated activity, Haines of 5 today and tonight.

ERC's at record levels above 97th percentile!!

SPECIFIC:

Butte Sector: Smoldering material will continue to burnout, especially in the stump holes and large dead and down. Minimal heat exists in the sector, expect this to continue as mopup and patrol continues.

Lassen Sector: Fire progression is primarily fuel and slope driven, but expect short intense runs and plume development in areas where fuel, winds, and topography align. Fire activity may increase quickly when smoke thins and surface winds increase in the afternoon. Rugged terrain will channel winds and increase the probability of ember cast and spotting, especially in upper elevations or thinner tree stands.

Westwood Sector: Fire activity in the Westwood sector and perimeter divisions will be primarily driven by topography and fuels but increasing winds will cause short to mid-range spotting to be possible. Interior heat continues to show in the rugged terrain, and can contribute to fire spread if ember cast is carried in the winds.

Clear Branch/Susanville Branch: Fire activity should be moderate to start the shift, but will increase quickly as the wind exposed slopes begins to experience the forecasted increase in winds. As the smoke clears in the afternoon and if fire becomes established in heavy pockets of fuel in favored topographic features, expect short intense runs and plume development. Wind and fire alignment with Willard creek and the Susan river drainages can result in large fire growth. Spot fires can become established in the heavy dead and down fuels, and contribute to higher spread rates.

AIR OPERATIONS

Air operations will be limited today in the morning, but as the smoke clears throughout the day, opportunities to utilize aircraft will become available.

SAFETY

- Short intense fire runs are possible. Make sure you know where your safety zone is at and the time it takes to get there.
- Watch for spot fires and fire in down-slope position.

Fuels and Fire Behavior Advisory

Northern California

August 2, 2021 to August 16, 2021

Subject: Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

Discussion: Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify through out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97th percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

DEMOBILIZATION MESSAGE Dixie Incident CA-BTU-009205

We appreciate your efforts during this incident and want to make sure that we get you to your next destination safely and efficiently. When we begin demobilization, a Tentative Demobilization List will be posted in several places around base camp, including the briefing area and the eating area. If you are on this list, please adhere to the following:

SHOW UP AT THE DESIGNATED TIME

- Show up at the designated time.
- Do not show up early.
- Do not show up late.

A demobilization schedule has been prepared in careful coordination with all essential demobilization functions. Not following the demobilization schedule can have significant negative impacts on the Demobilization Unit staff and all other resources scheduled for demobilization. We do not want you or any other resources to have unnecessary delays. Please adhere to your scheduled demobilization time.

BE PREPARED FOR A RE-ASSIGNMENT

There may be other incidents in the state that are in need of resources. There is a possibility that some of the resources released from this incident will be immediately assigned to another one. Please make sure you are properly supplied, rested, and nourished while waiting for your designated demobilization time.

BE THOROUGH AND EFFICIENT

Demobilization begins and ends at the Demobilization Unit. Please follow the instructions given to you when starting the demobilization process. Returning to the Demobilization Unit with a complete and accurate Demobilization Check-Out (ICS-221) form will help prevent any unnecessary delays and ensure you are shown as available for future assignments. Unforeseen delays can occur during the demobilization process, such as mechanical issues discovered while at Ground Support. Plan to visit the Time Unit towards the end of the demobilization process in order to provide an accurate accounting of your time.
