Dixie West Zone Fire Weather Forecast

Forecast Number: 33
Sectors: Lassen/Westwood
Shift Date: Thursday, August 19th 2021

Incident Meteorologist: Joe Goudsward
/s/ Joseph Goudsward
Forecast Issued: 1800 August 18th, 2021

*****Red flag warning in effect for branches 9 and 13 until 8 PM*****

WEATHER DISCUSSION:

An unseasonably deep upper level low pressure system will move from eastern Nevada to eastern Wyoming during the operational period. This will keep the incident in a predominant northerly flow aloft. As such, north to northeast winds are expected once again. The strongest winds are expected to be across the ridge tops and where the winds line up favorably with topography. These winds and dry air will result in local red flag conditions for branches 9 and 13 through early evening. As the aforementioned upper low moves away, temperatures will be warm slightly and winds will begin to slacken but remain somewhat gusty through mid-evening before laying down. Relative humidity will remain low with very poor recovery along the mid slopes.

WEATHER FORECAST THURSDAY: Smoke and haze in the morning, otherwise mostly sunny.

TEMPERATURES:	Ridge Top:	Highs: 68-73
	Slope/Valley:	Highs: 74-79
HUMIDITY:	Ridge Top:	Min: 17-23 %
	Slope/Valley:	Min: 14-20 %

20 FT WINDS: **Ridge Top:** North to northeast 5-10 mph in the morning, increasing to 10-20 mph with localized gusts up to 30 mph through late afternoon. Winds will decrease during the late afternoon through early evening.
Slope/Valley: North to northeast 3-6 mph in the morning, increasing to 10-15 mph with gusts of 20 mph in the afternoon. Localized winds may be higher where topography and winds align.

CHANCE OF THUNDERSTORMS: 0% - LAL: 1 - Haines Index: 3
STABILITY/INVERSION: Weak inversion likely to break by noon. Ventilation will improve dramatically.

WEATHER FORECAST THURSDAY NIGHT: Clear. Areas of smoke and haze.

TEMPERATURES:	Ridge Top:	Lows: 46-52
	Slope/Valley:	Lows: 37-42
HUMIDITY:	Ridge Top:	Max: 61-66 %
	Mid Slopes:	Max: 35-40 %
	Slope/Valley:	Max: 55-60 %

20 FT WINDS: **Ridge Top:** North to northeast 10-15 mph with gusts of 20 mph in the evening, becoming northeast around 4-8 mph after midnight.
Slope/Valley: North to northeast 10-15 mph with gusts to 20 mph in the evening, possibly slightly higher on exposed slopes and in deeper drainages. Becoming downslope/down valley 3-5 mph by morning.

CHANCE OF THUNDERSTORMS: 0% - LAL: 1 - Haines Index: 2
STABILITY/INVERSION: Moderate inversion developing after midnight with poor dispersion

EXTENDED OUTLOOK:

A slow warming trend will start on Friday and carry through the weekend. Winds on Friday will shift back to the southwest in advance of another dry front. This front will bring gusty winds on Saturday with elevated fire weather concerns. Sunday and into next week, warm and dry condition are expected with generally light winds as weak southwest flow gets established.

INPUTS

WEATHER SUMMARY: ****RED FLAG WARNING FOR BRANCHES 9 & 13****

Wind direction will continue to be from the Northeast, a major shift from previous days. Temperatures will be in the upper 60's to the upper 70's with minimum humidity dropping to 14 to 23% during the day. Winds will be Northeast in the morning 5-10 mph, increasing to 10-15 gusting to 30 mph. Overnight the temperatures will be in the upper 30's to lower 50's with humidity recovery at 50-65%, except 35-40% in the mid slope thermal belt areas. Winds overnight will continue from the Northeast at 10-15 mph with 20 mph gusts until early morning hours.

OUTPUTS

FIRE BEHAVIOR

GENERAL: ***FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA***

The Smoke layer will be heaviest in areas of active burning to start the day, but will thin around mid-day. Wind direction will continue to impact the eastern aspects of the topography, a different effect than previous days. Areas that have been sheltered by winds in previous days will now get a push of wind. Expect this change to potentially cause an increase in activity, including single and group tree torching. Exceptionally dry timber stands are very receptive to spotting, and can contribute to large fire growth. The probability of ignition will be around 60% under the smoke cover, and 90% in clear areas. Spotting distances of ¼ to ¾ of a mile are possible in topographic favored areas and any downwind locations.

ERC's at record levels above 97th percentile!!

SPECIFIC:

Butte Sector: Smoldering material will continue to burnout, especially in the stump holes and large dead and down. Minimal heat exists in the sector, expect this to continue as mopup and patrol continues.

Lassen Sector: Fire activity should be moderate to start the shift. Fire activity on the eastern aspects will see winds throughout the day. Expect an increase quickly as the wind exposed slopes begins to experience the forecasted increase in winds. Rugged terrain will channel winds and increase the probability of ember cast and spotting, especially in upper elevations or thinner tree stands. Fire activity in Branch 13 will be especially prone to terrain driven winds.

Lake Branch: Fire activity in this branch will be primarily smoldering and isolated ground fire. Control lines should not be challenged by the change of wind direction, but be aware of snag trees coming down.

Clear/Susanville/Janesville Branches: Fire progression is primarily fuel and slope driven, but expect short intense runs and plume development in areas where fuel, winds, and topography align. As the smoke clears in the afternoon and if fire becomes established in heavy pockets of fuel in favored topographic features, expect short intense runs and plume development. Wind will be channeled along the escarpment to the southeast and up the Susan river drainage. Expect the steady Northeast winds to influence fire activity for most of the shift.

AIR OPERATIONS

Air operations should be able to start early today, but smoke may inhibit areas nearest the high activity locations.

SAFETY

- Escape routes and safety zones are a must especially with heavy timber and extremely dry fuels and observed extreme fire behavior!
- Snags and stump holes are likely in timber areas.

Fuels and Fire Behavior Advisory

Northern California

August 17, 2021 to August 31, 2021

Subject: Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

Discussion: Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify thorough out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97th percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

 The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

DEMOBILIZATION MESSAGE Dixie Incident CA-BTU-009205

We appreciate your efforts during this incident and want to make sure that we get you to your next destination safely and efficiently. When we begin demobilization, a Tentative Demobilization List will be posted in several places around base camp, including the briefing area and the eating area. If you are on this list, please adhere to the following:

SHOW UP AT THE DESIGNATED TIME

- Show up at the designated time.
- Do not show up early.
- Do not show up late.

A demobilization schedule has been prepared in careful coordination with all essential demobilization functions. Not following the demobilization schedule can have significant negative impacts on the Demobilization Unit staff and all other resources scheduled for demobilization. We do not want you or any other resources to have unnecessary delays. Please adhere to your scheduled demobilization time.

BE PREPARED FOR A RE-ASSIGNMENT

There may be other incidents in the state that are in need of resources. There is a possibility that some of the resources released from this incident will be immediately assigned to another one. Please make sure you are properly supplied, rested, and nourished while waiting for your designated demobilization time.

BE THOROUGH AND EFFICIENT

Demobilization begins and ends at the Demobilization Unit. Please follow the instructions given to you when starting the demobilization process. Returning to the Demobilization Unit with a complete and accurate Demobilization Check-Out (ICS-221) form will help prevent any unnecessary delays and ensure you are shown as available for future assignments. Unforeseen delays can occur during the demobilization process, such as mechanical issues discovered while at Ground Support. Plan to visit the Time Unit towards the end of the demobilization process in order to provide an accurate accounting of your time.
