### FIRE BEHAVIOR

#### GENERAL:

- Hot and dry conditions persist today, and lower nighttime humidity and fuel moistures which will increase probability of ignition and resistance to control.
- In areas where smoke inversions have set in, expect earlier increase in fire behavior in thermal belt zones. Also, areas where inversion lifts (or breaks) activity will increase with air flow and exposure to solar heating.
- Nighttime fire behavior will be more active in the thermal belt (mid-slope), think warmer and dryer. Whereas the valley bottoms will have the greatest humidity recovery and cooler temperatures to moderate fire behavior.

#### SPECIFIC:

**DIV-NN/OO:** Minimal activity along Hwy 147 (W of Dyer). Monitor for heat near the line and holdover spots.

**DIV-PP:** Minimal activity in most areas, with large dead and down fuel potentially holding heat, and stump holes near control lines. Dead and down will have high resistance to control due to exceptionally dry fuels and low humidity. This a wind prone area.

**DIV-QQ & Genesee Group:** On Mt Jura and into Genesee Valley expect active backing, flanking and surface fire with individual tree torching with potential for short-range spotting. Inversion, if present should clear in afternoon. Watch out for spotting from yesterday's activity. Monitor fire behavior activity trend to identify indicators and time when fire behavior increases and decreases. Watch for spot fires from "Peel Ridge" spot fire

**Valley Group:** Minimal activity, watch out for hold-over spots and hidden heat in stump holes. Any duff smoldering near control lines.

**DIV-RR: Grizzly Spot has spotted to NW end of Peel Ridge (aka 'Peel Ridge Spot').** Active surface fire, individual and group tree torching, passive crowning (supported by surface fire) where fuels/slope align. Grizzly and Peel Ridge spots will have active backing, flanking, and roll-out and up slope runs. Activity will be moderated in the morning by deep smoke inversion layer. **Watch out for spotting, rollout and potential uphill fire runs. If column develops— watch out for long-range spotting, increase of fire activity and potential down outflow winds if the column collapses. Grizzly and Peel Ridge Spots if not grown together likely will Little Grizzly Creek**

**DIV-WW/XX:** Minimal activity, interior smoldering.

#### Night Branch

Moderate to good RH recovery. Fire behavior should moderate in the late evening. The shift will start with a higher probability of ignition (>15-29% POI). Monitor areas for spots from yesterday's column development, specifically in Genesee Valley area.

**AIR OPERATIONS:** Smoke inversion lifting out of Genesee Valley between 11:30-13:30.

**SAFETY:** Large fire growth is expected today. Don't be surprised! Have your safety zones and/or escape routes pre-identified and timed.

## ***SAFETY MESSAGE***

*Fire fighter safety comes first on every fire, every time*

### **Dixie Specific Safety:**

#### **Structure Protection: Genesee Valley and Taylorsville area.**

- Ensure an adequate LCES is in place before committing to structure protection.
- Fire in and among houses can create a chaotic situation. Maintain your cool and communicate clearly with adjoining forces and supervisors.
- Be aware of property owners that have remained in the area and in some cases proved problematic.

#### **Firing Operations: QQ, Genesee Group, RR**

- Firing around structures in these changing weather conditions can be challenging. Pre-identify problem areas and make plans to mitigate those problems before beginning.
- Fully brief all firing and holding forces to ensure the plan is well understood.
- Continually monitor weather and terrain effects as the firing operation progresses.
- Identify primary and secondary escape routes prior to beginning.

*Are you as engaged today as you were on the first day you were here?*

### **Medical Emergency**

- Review the 206 daily and ensure all personnel know their role in a medical response.
- Box 6 of the 206 is for division forces to identify and prefill in for their specific location.
- Patient care is the priority in a medical emergency. Don't delay care or local response to gather the 8-line information.
- Know where your EMTF's are and confirm you're in contact with them daily.
- Review IRPG 105-106.

**TEAM SAFETY OFFICERS:** Doug McKelvey, Matt Lipson, Michele Tanzi, Linda Ferguson

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.
