### INPUTS

**WEATHER SUMMARY:**

The weather will continue to be warm and dry, with high winds. Temperatures will be 72-84 degrees during the day and 38-53 degrees overnight. Humidity will be 9-16 percent during the day and 25-65 percent overnight. The wind will be southwest 11-17 mph with gust to 20-25 mph in the afternoon. Overnight the winds will be southwest 10-15 mph with gust to 20-25 mph. Winds will weaken through the night.

### OUTPUTS

**FIRE BEHAVIOR**

**GENERAL:** \*\*\***FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA**\*\*\*

The red flag warning has expired, however the conditions and the fuels are still going to create fire conditions resistant to control. The wind will continue to be strong enough to keep the primary direction of the fire progressing towards the northeast. The diminishing winds could contribute to column development if the fire becomes established control lines and makes a large run. The limited humidity recovery and the fuels will continue to be extremely receptive to embers, allowing spots to become established quickly if suppression is delayed.

**SPECIFIC:**

**Lassen/Shasta Sector:** The wind will continue to create spotting issues, specifically in Branch 16. The column will continue to be directed to the east to northeast. The fuels along the highway are more spaced with shorter brush which should reduce the amount of fire in the crown. The area to the west has open meadows with light fuel loading more conducive for control efforts. Branch 9 will see little growth as the fuels in the Reading Fire area need higher winds to support fire spread.

**Butte Sector:** The wind will not have as much impact in the area but will be stronger than in the previous days. Interior torching could see longer transports of fire brands. The stronger wind will also contribute to more overstory falling to the ground creating more potential for active fire.

**Janesville Branch:** The winds will continue to be strong on top of the ridge and filter down to the valley. The timber on the ridge will contribute to mid-range spotting. The fuels in the valley are light and receptive to embers. The fuels are also more favorable for structure protection and suppression efforts.

**Clear/Lake Branch:** The air should start to clear out throughout the day and increase activity of smoldering material. The wind will also contribute to the overstory continuing to fall to the ground creating new ground fuels and increasing activity. Any interior islands will have the potential to increase in activity.

### AIR OPERATIONS

The smoke may settle into some of the deeper valleys but should clear early.

### SAFETY

Weather is a dynamic factor in fire spread, continue to be observant of changes and how it interacts with the terrain and fuels. Have escape routes and safety zones built into your plan for the day.

# Fuels and Fire Behavior Advisory

## Northern California

September 1, 2021 to September 15, 2021

**Subject:** Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

**Discussion:** Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Events with wind have led to extreme rates of spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

**Difference from normal conditions:** Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify throughout the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

### Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97<sup>th</sup> percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

### Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

**Area of Concern:** Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.
