WEATHER DISCUSSION: Very dry conditions continue over the region with poor to moderate mid slope recoveries this morning with relative humidity dropping to critical levels this afternoon, despite slightly cooler temperatures. Light drainage winds this morning will transition into a more typical southwest wind this afternoon. Although lighter winds overall are expected, wind gusts from the southwest along ridgetops could still reach around 20 mph, especially across the Janesville branch area and to the southeast along US-395.

TODAY:

SKY/WEATHER: Morning valley smoke, clearing from southwest to northeast afternoon.

OUTPUTS

FIRE BEHAVIOR

GENERAL: ****FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA****

The weather will cool again slightly today, however the humidity will continue to be dry with the airmass we have overhead. This will continue to allow for limited recovery in the higher elevations. This will increase the consumption of the burning materials. The fuels and burning conditions will continue to support short range spotting when there is torching near the lines. Fuels will continue to be extremely receptive to ember brands, contributing to spots across the control lines. Interior islands will continue to burn out during the heat of the day. As the winds weaken, they will be more terrain driven which will allow for multiple wind directions in any given area.

SPECIFIC:

Lassen/Shasta Sector: The wind will continue to create spotting issues, specifically in Branch 16. The transport winds will continue to move the column to the northeast. The fuels along the highway are more spaced with shorter brush which should reduce the amount of fire in the crown. The area to the west has open meadows with light fuel loading more conducive for control efforts. Branch 9 will see little growth as the fuels in the Reading Fire area need higher winds to support fire spread.

Butte Sector: The wind will not have as much impact in the area but will be stronger than in the previous days. Interior torching could see longer transports of fire brands. The stronger wind will also contribute to more overstory falling to the ground creating more potential for active fire.

Janesville Branch: The winds will continue to be strong on top of the ridge and filter down to the valley in the late afternoon and early evening. The winds will align with several drainages and allow for faster fire progression down slope. The winds in the area be very erratic and will create fire whirls and safety concerns

Clear/Lake Branch: The air should start to clear out throughout the day and increase activity of smoldering material. The wind will also contribute to the overstory continuing to fall to the ground creating new ground fuels and increasing activity. Any interior islands will have the potential to increase in activity.

AIR OPERATIONS

The smoke may settle into some of the deeper valleys but should clear early.

SAFETY

Snags will continue to create problems, continue to evaluate the area you are working, especially before sunset. The 395 corridor has several examples of erratic fire behavior as it comes down the ridge, continue to pay attention to the wind patterns and how the fire is reacting. Remember the Eagle Fire of 1989 and Beckwourth 2021
