INPUTS

WEATHER SUMMARY:

The high pressure will begin to weaken today, with humidity remaining low and temperatures cooling slightly. Temperatures will be 83-91 degrees during the day and 35-55 degrees overnight. Humidity will be 8-12 percent during the day and 20-35 percent overnight. The wind will be southwest 5-10 mph with gust to 15 mph in the afternoon with gust to 20 mph in the evening. Overnight winds will be southwest 5-10 mph.

OUTPUTS

FIRE BEHAVIOR

GENERAL: ***FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA***

The low humidity and poor recovery overnight will extend active burning into the evening and reduce the effect of smoke shading on the fire. Spotting potential is still high and increases when the smoke clears in the late morning and afternoon. The interior islands will continue to actively burn in the afternoon and can potentially cast embers across the control lines if close enough. The high pressure will reduce the vertical build if a column when there is minimal heat.

SPECIFIC:

Lassen Sector: The fire will continue to burn actively in the late morning and afternoon. The timber will be more conducive for fire spread compared to the snow brush. Spotting across the line along the southern portion of Badger Mountain will continue to be an issue with any increase of fire activity near the control line. If the fire spread onto or past Badger Mountain the fuel loading increases and will have higher potential for spotting issues.

Shasta Sector: The spotting issues will continue in the timber, however the potential reduces as the fire moves closer to Highway 44. The terrain flattens with increased spacing in the timber reducing the potential for fire on the crowns. The large areas of grass will aid in fire suppression efforts when spotting does occur.

Westwood Sector: The interior heavy fuels will continue to smolder and create issues, along with the bogs. The clear afternoons will increase the visibility and activity of the smoldering material. The Highway 395 corridor will continue to back down to the highway. Smoke production from above the ridge will begin to reduce as the fire has burned into the Beckwourth Fire. This could result in less shading over the Honey Lake area and increase the intensity of the downslope winds in the late afternoon and early evening.

Butte Sector: The heavy fuels will continue to smolder and have the potential to create new fire with the cured overstory falling to the ground. Stumps will continue to burn in the root systems. The bogs will also continue to smolder and create problems for extinguishment.

AIR OPERATIONS

The inversion will hold the smoke in the area until late morning. Visibility will be good earlier on the west portion of the fire.

SAFETY

Know what the expected weather and fire behavior are for the day, this will allow for sound tactical decisions during your shift.
