FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 49	TYPE OF FIRE: Wildfire
FIRE NAME: Dixie – West Zone	OPERATIONAL PERIOD: 9/12/21 – 9/13/21 0700-0700

INPUTS

WEATHER SUMMARY:

The weather will be cool and continue to dry out. Temperatures will be 72-82 degrees during the day and 35-52 degrees overnight. Humidity will be 12-22 percent during the day and 40-70 percent overnight. The wind will be southwest 5-10 mph with gust to 15 mph in the afternoon. Overnight winds will be northwest around 5 mph.

OUTPUTS

FIRE BEHAVIOR

GENERAL: ***FUELS AND FIRE BEHAVIOR ADVISORY IN EFFECT FOR THE FIRE AREA***

The fuels will continue to dry out from the small amount of rain received on Friday morning. The relative humidity recovery overnight will help to moderate the behavior in the morning. In the afternoon the fire will increase in activity as the sun heats the fuels and continues to dry them out. The rate of spread will also increase in the afternoon, with potential moderate rates of spread in wind prone areas. The spotting potential continues to increase as the fire fuels dry with the wind and sun. The spotting distance will be short range, several hundred feet, unless the fire becomes established and develops a column.

SPECIFIC:

Lassen Sector: The fuels will continue to dry, and the fire will become more active in the afternoons. The winds will return to more terrain driven, creating different wind patterns around the peaks. The fuels on top of the Hat Creek Rim will continue to be more active. Torching can be expected in the afternoon, with potential for short range spotting.

Shasta Sector: The heavy materials will continue to consume, and the ground fuels will continue to smolder in the morning and active in the afternoon. The terrain driven winds will create different wind patterns throughout the day. The denser tree stands can expect interior torching, with potential for short range spotting.

Butte/Westwood Sector: The rain and wind increased the amount of overstory dropping to the ground. The rain was not enough to completely extinguish the heavy materials. The increasing new ground layer will dry out over the next couple of days and new smokes will continue to emerge.

AIR OPERATIONS

Visibility will be good for aircraft operations over all areas of the fire throughout the day.

SAFETY

Be prepared for fire activity to increase in the afternoon and base all decisions of expected weather and fire behavior.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N" or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.
