**FIRE BEHAVIOR FORECAST**

<b>FORECAST NUMBER:</b> #67	<b>TYPE OF FIRE:</b> Wildland
<b>FIRE NAME:</b> Dixie	<b>OPERATIONAL PERIOD:</b> 9/25/21 Day Shift and Night Shift
<b>DATE ISSUED:</b> 9/24/21	<b>TIME ISSUED:</b> 2000
<b>UNIT:</b> Plumas National Forest	<b>WRITTEN:</b> <i>David Quisenberry</i> - FBAN

**FUEL ASSUMPTIONS:** The fuels involved on the Dixie fire consist primarily of conifer timber litter with a shrub or grass understory. Fuel model TU 5 (timber/shrub) best represents these conditions. There are also areas of fuel model GS 2 (shrub/grass) especially on the eastern side and lower elevation areas.

Consider all fuels to be available to contribute to fire spread. Grass fuels are completely cured, and live fuel moistures in shrubs and canopy are at levels that will easily carry fire. *1000-hour fuel moistures are in the single digits.*

**WEATHER SUMMARY:** Reference fire weather forecast for specifics. Breezy Southwest Winds with Low Humidity for the Weekend. Fire Weather Watch in Effect Monday for Gusty Winds and Low Humidity

**General Fire Behavior Forecast:** Minimal fire behavior expected today inside the fire perimeter. Most of the fire activity will be smoldering stumps, logs, and cat faced trees. The potential for surface spread in needle cast and duff is increasing as fuel moistures trend lower. Expect light white smoke from these interior heat sources. Unburned fuel inside but close to containment lines could provide an avenue for escape and should be assessed continually for the presence of heat sources. Fire outside the current perimeter will spread rapidly into available fuels. Spread rates would be high and fire would likely prove difficult to suppress.

**Night Shift:** Minimal fire behavior expected. Some smoldering or isolated smokes will continue. Minor fire spread in reburn/needle cast area is possible. Initial attack during nighttime hours could display active fire behavior until at least midnight and diminish thereafter.

**Large Fire Growth Predictors on the Plumas NF:**

**RH below 15% + Wind speed > 10 mph + Burning Index > 90**

**All 3 of these elements are exceeded today**

**Month that large fire growth conditions occur most frequently on the Plumas – September!**

**Specific:**

**DIV UU** – Minimal fire behavior expected.

**DIV RR** – Minimal fire behavior expected.

**DIV WW/XX**- Minimal fire behavior expected.

**DIV NN/QQ/PP/OO** – Minimal fire behavior expected.

**Reburn from needle cast could occur in any of the divisions.**

**Initial Attack** – If IA occurs, expect fire to develop quickly and to display fire behavior that could challenge control efforts.  
\*\*\*\*\*

Fine fuel moisture today is - 3 % Rates of Spread in Timber- 9 to 18 chains per hour

Probability of Ignition today - 85% Rates of Spread in Grass- 22 to 57 chains per hour

Spotting Distance Today- 1/2 or greater Flame Lengths- 5 to 11 feet

**AIR OPERATIONS:** Clear skies are forecasted for most of the day. No impacts to aviation expected.

**FIRE BEHAVIOR SAFETY:** Avoid mixing berms containing heat with green fuels during line rehab work. Vehicles and machinery operating near unburned fuels have the potential to ignite new fires.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

# Resource Advisor Message

- Resource advisors will continue to work with operations staff to coordinate the big picture of where equipment is best allocated over time.
- Remember to follow Regional guidelines on hazard tree removal; REAFs will have copies of those. Guidelines state no tree removal from more than one tree length from the road and 1.5 tree lengths on the uphill side of the road. Trees removed should be dead or showing sufficient mortality to be removed.
- Fuel breaks should retain large trees for shade. Valuable logs should be decked; smaller logs and branches should be chipped. Fuel breaks should not be wider than one tree width. Shrubs and smaller trees can be masticated. Avoid leaving bare soil.
- In general we are not repairing lines on private land. REAFs can document suppression damage and prepare a report if requested. Consult a REAF if you have questions. In cases where a line goes in and out of NF we will repair the line. Consult with the Agency Administrator if needed.
- REAFs will help facilitate involvement and guidance from Forest personnel on the repair effort; i.e. continue to coordinate on fire lines to be left open.

2. File your docs in the "eDocBox-EAST ZONE-TO BE FILLED".  
Pick 1 of the following methods:

A. Drop them daily into the eDocBox-EAST ZONE-TO BE FILLED in the General Channel.

B. Email them daily to  
[2021.dixie.ca.docs@firenet.gov](mailto:2021.dixie.ca.docs@firenet.gov)

All documentation will be filed electronically in TEAMS for the DIXIE FIRE. There are no paper copies or paper doc boxes. If you need to scan files, there is one available in the Plans room at ICP. If you have questions about what to file or how, please reach out!
